OpenStax Chemistry Supplemental Test Items

Chapter 01: Essential Ideas

Supplemental Test Items to accompany OpenStax *Chemistry*. Note that not all chapters of OpenStax *Chemistry* have accompanying test items. Building on the community-oriented nature of OpenStax resources, we invite you to submit items to be considered for future inclusion.

Page 1 of 8

- B. standard intercontinental units
- C. international system of units*
- 8. Convert 18.50 ft to the SI unit for length. (Outcome # 6) (DOK 2)
 - A. 563.9 cm
 - B. 5.639 m*
 - C. 0.005639 km
- 9. An experimental mouse weighs about 4.41×10^{-2} lbs. What would the weight be in the SI unit for mass? (Outcome # 6) (DOK 2)
 - A. 20.0 g
 - B. 0.0200 kg*
 - C. 20,003 mg
- 10. Accuracy is defined as how close a measured value comes to a ______. (Outcome # 6) (DOK1)
 - A. core value
 - B. fixed value
 - C. true value*
- 11. Precision is defined as how _____ the measured values are to one another. (Outcome # 6) (DOK 1)
 - A. common
 - B. reproducible*
 - C. accurate
- 12. An experiment requires you to make several measurements. Based on the values in the table below, what would be the best statement that represents the data set if the true value is 0.2135? (Outcome # 11) (DOK 2)

Trial A	Trial B	Trial C
0.2139	0.2893	0.2135
0.2130	0.3210	0.2134
0.2133	0.2999	0.3712
0.2135	0.2998	0.3715

- A. The measurements in Trial A are accurate and precise, Trial B is neither accurate nor precise, and Trial C is accurate however, not precise.
- B. The measurements in Trial A are accurate and precise, Trial B is neither accurate nor precise, and Trial C is precise however, not accurate.
- C. The measurements in Trial A are accurate and precise, Trial's B and C are neither accurate nor precise.*
- 13. An experiment requires you to make several measurements. Based on the values in the table below, what would be the best statement that represents the data set if the true value is 2.73? (Outcome # 11) (DOK 2) (Paired item 1)

Chapter 01: Essential Ideas

Trial A	Trial B	Trial C
2.73	3.00	2.77
3.05	3.03	2.79
3.09	2.99	3.31
2.44	3.01	2.05

- A. The measurements in Trial B are precise, however, not accurate. Trial's A and C are neither accurate nor precise.*
- B. The measurements in Trial B are accurate, however, not precise. Trial's A and C are neither accurate nor precise.
- C. The measurements in Trial's A, B, and C are neither accurate nor precise.
- 14. Which of the following would be considered a chemical change? (Outcome # 9) (DOK 1)
 - A. a rusting nail*
 - B. melting ice
 - C. crushing an aluminum can
- 15. Which of the following would be considered a physical change? (Outcome # 9) (DOK 1)
 - A. digesting food
 - B. burning paper
 - C. boiling water*
- 16. A salt water solution is classified as what type of matter? (Outcome # 9) (DOK 1)
 - A. homogeneous mixture*
 - B. heterogeneous mixture
 - C. pure substance
- 17. How many significant figures are in 0.0000401 kg? (Outcome # 5) (DOK 1)
 - A. 3*
 - B. 7
 - C. 2
- 18. How many significant figures are in 0.20 L? (Outcome # 5) (DOK 1) (Paired item 1)
 - A. 3
 - B. 1
 - C. 2*
- 19. Express 1.40 x 10^{-3} L in decimal notation. (Outcome # 5) (DOK 1)
 - A. 0.00140 L*
 - B. 0.0014 L
 - C. 0.001 L
- 20. What is the answer for the following calculation: (1.249 0.0234) x 139.37? (Outcome # 5) (DOK 2)
 - A. 170.812
 - B. 170.8*
 - C. 170.81

Page 4 of 8

C. law*

OpenStax *Chemistry* Supplemental Test Items Chapter 01: Essential Ideas

- 30. The scientific method involves various techniques which allow researchers to investigate scientific questions through _____ and _____. (Outcome # 10) (DOK 1)
 - A. analysis and observations
 - B. observations and experimentation*
 - C. analysis and predictions
- 31. Why has Galileo been called the father of modern science? (Outcome # 10) (DOK 1)
 - A. because he made observations and conducted experiments*
 - B. because he discovered electrochemical cells
 - C. because he was a philosopher
- 32. List the basic steps of the scientific method process in the order they must be carried out. (Outcome # 10) (DOK 1)
 - A. observation, hypothesis, prediction, experimentation, and conclusion*
 - B. hypothesis, observation, prediction, experimentation, and conclusion
 - C. prediction, observation, hypothesis, experimentation, and conclusion
- 33. Which of the following is not part of the scientific method process? (Outcome # 10) (DOK 1)
 - A. observation
 - B. prediction
 - C. discussion*
- 34. Which of the following would be a good example of an observation in the scientific method process? (Outcome # 10) (DOK 2)
 - A. a researcher watching a chemical reaction
 - B. a researcher watching a chemical reaction and noting color and temperature changes*
 - C. a researcher setting up a chemical reaction in a flask and allowing it to stir for 2 hours
- 35. Which of the following would be a good example of an observation in the scientific method process? (Outcome # 10) (DOK 2) (Paired item 1)
 - A. a physician observing a patient's reaction to some medication*
 - B. a physician observing his watch
 - C. a physician speaking with and observing a patient in an examination room
- 36. Which of the following would be good tools for making scientific observations during a chemical reaction? (Outcome # 10) (DOK 2)
 - A. barometer, thermometer, scale
 - B. thermometer, your eyes, clock*
 - C. thermometer, your eyes, tape measure
- 37. Which of the following would be a good tool for making scientific observations after isolating a solid product from a chemical reaction? (Outcome # 10) (DOK 2)
 - A. balance*

OpenStax *Chemistry* Supplemental Test Items Chapter 01: Essential Ideas

- B. clock
- C. tape measure
- 38. What can be used to measure the mass of an object? (Outcome # 10) (DOK 1)
 - A. balance*
 - B. tape measure
 - C. caliper
- 39. Which of the following would be a good example of a hypothesis in the scientific method process? (Outcome # 10) (DOK 3)
 - A. a researcher considers that the more sunlight a green plant receives, the larger the plant will grow*
 - B. a researcher wonders amount the effect of more sunlight on green plant growth
 - C. a researcher watches as a green plant exposed to more sunlight grows over a period of 1 month
- 40. Which of the following would be a good example of a hypothesis in the scientific method process? (Outcome # 10) (DOK 3) (Paired item 1)
 - A. a clinician confirms that taking a vitamin every day will decrease the level of tiredness in people
 - B. a clinician tells a patient that taking a vitamin every day, may decrease the level of tiredness in people
 - C. a clinician contemplates that taking a vitamin every day, may decrease the level of tiredness in people*
- 41. Which of the following would be a good example of a hypothesis in the scientific method process? (Outcome # 10) (DOK 3) (Paired item 2)
 - A. a botanist adds 20 mL of water to his plants on a daily basis and he notices a healthy growth, therefore, he believes that adding 40 mL of water on a daily basis will enhance their growth further*
 - B. a botanist adds 20 mL of water to his plants on a daily basis and he notices a healthy growth
 - C. a botanist adds 20 mL of water to his plants on a daily basis and he notices a healthy growth, therefore, adding 40 mL of water on a daily basis will definitely enhance their growth further
- 42. Once a hypothesis has been established, it can be tested by conducting an _____. (Outcome # 10) (DOK 1)
 - A. observation
 - B. experiment*
 - C. analysis
- 43. Which statement is correct about the scientific method process? (Outcome # 10) (DOK 1)

- A. after testing a hypothesis, a conclusion can be drawn on whether it will be accepted or rejected*
- B. after testing an observation, a conclusion can be drawn on whether it will be accepted or rejected
- C. after testing a conclusion, it can be predicted whether a hypothesis will be accepted or rejected
- 44. Why is chemistry considered a central science? (Outcome # 10) (DOK 1)
 - A. because it is a core course required for most majors in college
 - B. because it is the fundamental science for many other disciplines*
 - C. because it is very important in medicine
- 45. What is applied research? (Outcome # 10) (DOK 1)
 - A. it deals primarily with solving practical real-world problems*
 - B. it deals primarily with solving practical laboratory problems
 - C. it deals primarily with the fundamentals of science that may result in future applications
- 46. What is basic research? (Outcome # 10) (DOK 1)
 - A. it deals primarily with solving practical real-world problems
 - B. it deals primarily with the fundamentals of science that may result in future applications*
 - C. it deals primarily with solving practical laboratory problems
- 47. Which of the following is an example of applied research? (Outcome # 10) (DOK 2)
 - A. a researcher tries to develop a new anti-cancer drug*
 - B. a researcher tries to extract a newly found natural product from plants to study its medicinal properties
 - C. a researcher studies a hormone and its prospect as a cell signaling molecule
- 48. Which of the following is an example of applied research? (Outcome # 10) (DOK 2) (Paired item 1)
 - A. a researcher tries to extract a newly found natural product from plants to study its medicinal properties
 - B. a researcher tries to study the effect of a new drug on HIV-inhibition*
 - C. a researcher studies a hormone and its prospect as a cell signaling molecule
- 49. Which of the following is an example of basic research? (Outcome # 10) (DOK 2)
 - A. a researcher tries to study the effect of a new drug on HIV-inhibition
 - B. a researcher tries to develop a new anti-cancer drug
 - C. a researcher studies a hormone and its prospect as a cell signaling molecule*
- 50. Which is of the following is an example of a physical property? (Outcome # 10) (DOK 1)
 - A. carbon monoxide is poisonous
 - B. acids are sour and bases are bitter*

OpenStax *Chemistry* Supplemental Test Items Chapter 01: Essential Ideas

- C. an iron nail rusts
- 51. Which is of the following is an example of a physical property? (Outcome # 10) (DOK 1) (Paired item 1)
 - A. water freezes at 273.15 K*
 - B. carbon monoxide is poisonous
 - C. an iron nail rusts
- 52. Which is of the following is an example of a physical property? (Outcome # 10) (DOK 1) (Paired item 2)
 - A. lead forming lead oxide in the presence of air
 - B. the color of paint*
 - C. digestion
- 53. Which is of the following is an example of a chemical property? (Outcome # 10) (DOK 1)
 - A. water boils at 100 °C
 - B. acids are sour and bases are bitter
 - C. an iron nail rusts*
- 54. Which is of the following is an example of a chemical property? (Outcome # 10) (DOK 1) (Paired item 1)
 - A. water boils at 100 °C
 - B. carbon monoxide is poisonous*
 - C. a copper penny weighs 3.00 g
- 55. The following is an example of a chemical change. (Outcome # 10) (DOK 1)
 - A. cutting paper
 - B. burning paper*
 - C. folding paper
- 56. The following is an example of a chemical change. (Outcome # 10) (DOK 1) (Paired item 1)
 - A. shredding paper
 - B. decomposing waste*
 - C. dissolving sugar
- 57. A website claims that there is a natural cure for all cancers; however, doctors do not want to recommend natural remedies because it would make them obsolete. Is this statement logical? (Outcome # 10) (DOK 3)
 - A. yes, doctors can cure all patients
 - B. yes, doctors can cure some patients with natural remedies
 - C. no, doctors cannot cure all patients and regardless of treatment, some patients still remain ill and die*
