Chapter 1: Introduction and overview of audit and assurance

Review questions

1.11 What does ‘assurance’ mean in the financial reporting context?

An **assurance engagement** (or service) is defined as ‘an engagement in which an assurance practitioner expresses a conclusion designed to enhance the degree of confidence of the intended users other than the responsible party about the outcome of the evaluation or measurement of a subject matter against criteria’ (*Framework for Assurance Engagements*, para. 8; *International Framework for Assurance Engagements*, para. 7).

In the financial reporting context ‘assurance’ relates to the audit or review of an entity’s financial report.

An audit provides reasonable assurance about the true and fair nature of the financial reports, and a review provides limited assurance. The audit contains a positive expression of opinion (e.g. ‘in our opinion the financial reports **are** in accordance with (the Act) including giving a true and fair view...’), while the review contains a negative expression of opinion (e.g., ‘we have **not** become aware of any matter that makes us believe that...the financial reports are **not** in accordance with (the Act)... including giving a true and fair view..’).

An auditor may also perform agreed upon procedures for a client, but these do not provide any assurance. The client determines the nature, timing and extent of procedures and no opinion is provided to a third-party user.

1.12 Explain the difference between a financial report audit and an assurance engagement.

An assurance engagement is an engagement in which an assurance practitioner expresses a conclusion designed to enhance the degree of confidence of the intended users other than the responsible party about the outcome of the evaluation or measurement of a subject matter against criteria.

A financial report audit is one type of assurance engagement. ASA 200 states that the objective of a financial report audit is for the auditor to express an opinion about whether the financial report is prepared in all material respect in accordance with a financial reporting framework. Therefore, a financial statement audit requires the auditor to use the financial reporting standards and the relevant law (e.g. Corporations Act 2001) as the relevant criteria, and assess whether the information provided by the company managers in the financial report is in accordance with those laws and standards.

Compliance and performance auditors are other examples of assurance engagements. In addition, the review or audit of a sustainability report is a type of assurance engagement.

1.13 Who are the three parties relevant to an assurance engagement in the financial reporting context? Explain why each party is interested in the result of an audit.

The **assurance practitioner** is an auditor working in public practice providing assurance on financial reports of publicly listed companies, or other entities.

The assurance practitioner (or auditor) is interested in the result of an audit because they are providing the audit service. If the audit is not of the required standard, the auditor's reputation will suffer.

Intended **users** are the people for whom the assurance provider prepares their report (e.g. the shareholders).

Intended users are interested in the result of an audit because they will rely on the audit when making their decisions about the entity. If the audit opinion (or report) provides assurance that the subject matter is in accordance with the criteria (e.g. true and fair) then the user is likely to place more reliance on the subject matter than if the audit opinion (or report) states that there was not enough evidence, or that serious problems were found during the audit.

The **responsible party** is the person or organisation (e.g. a company) responsible for the preparation of the subject matter (e.g. the financial reports).

They are interested in the result of an audit because they will use the report from the assurance practitioner (or auditor) to make improvements. They are also interested in receiving a positive report so that their interested users will place more reliance on the reports.

1.14 An assurance engagement involves evaluation or measurement of subject matter against criteria. What criteria are used in a financial report audit?

An auditor evaluates the contents of a financial report against the standards and laws that apply to that type of financial report. Listed public companies must abide by the Corporations Act, the Australian Accounting Standards (AASB) and the listing rules of the ASX. Certain companies must also abide by additional specific legislation, depending on their industry or legal status. In addition, if a company is listed in another country, foreign exchange listing rules and laws could apply to the financial report.

Auditing standards control the way an audit is conducted, they are not the criteria against which the financial report is evaluated.

1.15 Who would request a performance audit? Why?

A performance audit is an assessment of the economy, efficiency and effectiveness of an organisation's operations. It can be conducted internally (by internal audit) or externally (by an audit firm) and across the entire organisation or for part of an organisation.

Management may request a performance audit of its own company (or part thereof) in order to assess the economy, efficiency and effectiveness of the organisation. Ideally, the audit would identify issues that need to be addressed in order to increase the performance of the division or company. For example, the audit could examine a logistics department. It would assess the cost of running the department, the number of deliveries per input (such as labour hours, vehicle hours, etc.), and indicators of delivery on time to the correct address.

A performance audit could be conducted on a government department or agency as part of the process of accountability to the public. Stakeholders of government entities are usually seen to be more interested in economy, efficiency and effectiveness than in profit, or surplus. Performance auditing can expose poor practices, or even corruption, in an organisation. Performance auditing can provide information on the implementation of government policies. Regular performance auditing of government entities can help build trust between the government and the citizens.

1.16 What steps can an organisation take to increase the independence of its internal auditors?

Internal auditors are employees of the company, and therefore cannot be completely independent of the company. However, it is possible to increase the independence of the internal audit department through means such as funding, terms of reference, and reporting lines.

A well-funded internal audit department can investigate more issues and spend more time on each investigation, potentially increasing the chance of discovering fraud and other problems. An internal audit department with a small budget is likely to have fewer staff and less qualified staff (because they will be lower paid), and will have to make compromises on the issues to be investigated.

An internal audit department with wide terms of reference has the freedom to pursue the issues which the audit staff believe are most important or create the most risk for the organisation. A department with narrow terms of reference could be limited to investigating only certain matters, or must seek the approval of higher levels of management before commencing any investigation.

The internal audit department would be more independent if it reports to the audit committee rather than the CFO. If the internal audit department reports to the CFO it is possible that the CFO will prevent some issues from reaching other members of the management team, or the board of directors. Often, the problems will be within the CFO's department, creating a conflict of interest for the CFO when deciding whether to report the issue more widely. An internal audit department that reports directly to the

audit committee is outside the normal lines of management and reporting. The audit committee is part of the board of directors. Therefore, reporting to the audit committee increases the chance that the highest level of the organisation is aware of the problems and will approve the investigation. The audit committee also deals with the external auditor. If the internal auditor reports directly to the audit committee it can communicate the issues to the external auditor and ask them to consider them, where relevant, as part of the financial report audit.

Not all companies have an audit committee. Where the audit committee does not exist, the internal auditor could report directly to the full board of directors.

1.17 What is an ‘emphasis of matter’ paragraph? When do you think an auditor would use it?

As defined in ASA 706 (ASA 706 (5)):

Emphasis of Matter paragraph means a paragraph included in the auditor’s report that refers to a matter appropriately presented or disclosed in the financial report that, in the auditor’s judgement, is of such importance that it is fundamental to users’ understanding of the financial report.

The emphasis of matter paragraph is included in the audit report immediately after the opinion paragraph.

An emphasis of matter paragraph draws the attention of the reader to an issue that the auditor believes has been adequately and accurately explained in a note to the financial report. The purpose of the paragraph is to ensure that the reader pays appropriate attention to the issue when reading the financial report. The audit report remains unqualified and the user of the financial report can still rely on the information contained in the financial report (ASA 706; ISA 706).

The emphasis of matter paragraph is not used when the entity has not disclosed the issue in its report. The auditor can use an ‘other matter’ paragraph to introduce another matter that the auditor believes should be disclosed.

The usual circumstance which would warrant an Emphasis of Matter paragraph in the auditor’s report is the existence of a significant uncertainty, the resolution of which may materially affect the financial report.

From ASA 706:

A1. Examples of circumstances where the auditor may consider it necessary to include an Emphasis of Matter paragraph are:

- An uncertainty relating to the future outcome of exceptional litigation or regulatory action.
- Early application (where permitted) of a new accounting standard (for example, a new Australian Accounting Standard) that has a pervasive effect on the financial report in advance of its effective date.

- A major catastrophe that has had, or continues to have, a significant effect on the entity's financial position.

ASA 706 stresses that the inclusion of an Emphasis of Matter paragraph in the auditor's report does not affect the auditor's opinion. An emphasis of matter can be included in an unqualified auditor's report or a qualified auditor's report (see example in ASA 706).

1.18 Compare the financial report users and their needs for a large listed public company with those of a sporting club (for example, a football club). Are the users' needs the same in each case? Explain.

The users of the financial report issued by a large listed public company include shareholders, customers, suppliers, employees, lenders, competitors, and government agencies. They need information which will help them evaluate the future financial performance of the company (including profitability, liquidity and solvency), whether the company has overseas operations and the nature of their activities in those countries (to evaluate exposure to foreign exchange risk, risk to the company of a change in economic conditions in those countries, and whether it is apparently supporting countries with dictators), likely lack of compliance with various laws and regulations, whether the company (and its industry) need government support. Investors are concerned with the value of their investment, employees with their job security, customers with whether the company is likely to remain in business long enough to honour warranties, suppliers with whether they will be paid, lenders with the risk to their loans, competitors with the health of their rivals, and government agencies will be interested in taxes, tariffs, industry support, and economic growth.

Users of a sporting club's financial report are likely to be interested in the financial condition and performance of the club (its solvency) and whether it is investing in physical facilities, player payments etc. They might be interested in whether the sporting club supports local businesses and community groups. Although sports clubs are often companies limited by guarantee and have members, the members are usually unable to trade their interest in the club. Therefore, users of a sporting club's financial report are not concerned about profitability for its own sake, but whether it helps the club pay its players and expand its facilities. Creditors and lenders will be interested in the likelihood that they will be repaid. Government will be interested with sporting and community concerns.

Both sets of users require information about the financial position, performance, and cash flows of the entity. However, the decisions the users will make with the information vary. Investors in companies are primarily interested in the value of their investment, and whether to buy or sell shares. Users of reports issued by sporting clubs are primarily interested in whether the club has sufficient funds to pay players, officials, improve grounds etc., and are not expecting the club to make profits, other than to provide funds for these purposes. Members of sporting clubs (usually) cannot sell their interests in a club.

1.19 What international standards or guidelines are relevant to the assurance of corporate social responsibility disclosures?

The IAASB provides the ISAE, which are equivalent to the ASAR. ISAE 3000 establishes requirements and provides explanatory guidance for undertaking and reporting on assurance engagements other than audits or reviews of historical financial information covered by Auditing Standards or Standards on Review Engagements. For example, assurance engagements regarding:

- Environmental, social and sustainability reports;
- Information systems, internal control, and corporate governance processes; and
- Compliance with grant conditions, contracts and regulations.

In addition, the IAASB has issued ISAE 3410 on the Assurance of Greenhouse Gas Emissions. The IAASB believes that with the increasing attention given to the link between GHGs and climate change, many entities are quantifying their GHG emissions for internal management purposes, and an increasing number are also preparing a GHG statement:

- As part of a regulatory disclosure regime;
- As part of an emissions trading scheme; or
- To inform investors and others on a voluntary basis. Voluntary disclosures may be, for example, published as a standalone document; included as part of a broader sustainability report or in an entity's annual report; or made to support inclusion in a "carbon register."

The IAASB states that the focus is on an entity's GHG statement, it does not include requirements or guidance on assuring emissions offsets. The ISAE will also be of assistance to financial statement auditors when considering the carrying value of emission trading rights in a financial statement audit.

(See <http://www.ifac.org/IAASB/ProjectHistory.php?ProjID=0081> for further information)

The AccountAbility organisation also provides guidance for sustainability assurance. (See www.accountability.org for further information).

The International Organization for Standardization (ISO) issues quality control standards in several areas.

(See <http://www.iso.org> for further information).

1.20 Explain the system of reviewing the quality of audits done by registered company auditors.

The two main bodies that regulate auditors are ASIC and the CADB.

ASIC registers auditors, processes annual statements from registered auditors, enforces independence requirements and provides a whistle blowing facility for the reporting of

contraventions of the Corporations Act. ASIC conducts an audit inspection program to report on audit quality and make recommendations for continued improvement. ASIC visits a selection of firms annually to gain an understanding of their policies and procedures in relation to their independence, audit quality, methodologies and training programs.

The Companies Auditors Disciplinary Board (CADB) responds to an application by ASIC or APRA that an auditor has breached the Corporations Act or the ASIC Act. The CADB will be involved when it believes an auditor has not carried out their duties properly, is not a fit and proper person, is subject to disqualification or should not remain registered for some other reason. In response, the CADB may cancel or suspend an auditor's registration, give the individual a warning or ask them to make an undertaking to improve their conduct.

(See asic.gov.au and <https://www.cadb.gov.au/> for further information)

1.21 Explain the difference between the IAASB and the AUASB.

The AUASB is the Auditing and Assurance Standards Board of Australia.

“The Auditing and Assurance Standards Board (AUASB) is an independent, non-corporate Commonwealth entity of the Australian Government, responsible for developing, issuing and maintaining auditing and assurance standards.

Sound public interest-oriented auditing and assurance standards are necessary to reinforce the credibility of the auditing and assurance processes for those who use financial and other information. The AUASB standards are legally enforceable for audits or reviews of financial reports required under the Corporations Act 2001. The AUASB's role extends to liaison with other standards setters and participation in standard-setting initiatives.

AUASB Vision

Contribute to stakeholder confidence in the Australian economy, including its capital markets, and enhanced credibility in external reporting through independent auditing and assurance.

AUASB Mission

Develop, issue and maintain in the public interest, high quality Australian auditing and assurance standards and guidance that meet user needs and enhance audit and assurance consistency and quality. Contribute to the development of a single set of auditing and assurance standards and guidance for world-wide use. ”

(<http://www.auasb.gov.au/About-the-AUASB.aspx>)

The AUASB also works with other standard setters around the world, including the IAASB. The IAASB sets international auditing standards, focusing on audit, quality control, review, other assurance, and related services engagements. It was established by the IFAC Board (International Federation of Accountants) to function as an independent standard setting body under the auspices of IFAC and subject to the oversight of the Public Interest Oversight Board (PIOB).

(<http://www.ifac.org/auditing-assurance/about-iaasb/terms-reference>)

1.22 Explain the ‘audit expectation gap’. What causes the gap?

The audit expectation gap occurs when there is a difference between the expectations of assurance providers and those of the users of the financial reports. If a gap exists, it means that the users’ beliefs do not align with what the auditor’s performance in the audit. A gap usually occurs when the users of financial reports want *more* than the auditor provides.

The users could be unrealistic in their views. Some examples of unrealistic expectations are:

- the auditor provides complete assurance
- the auditor guarantees the future viability of the entity
- an unmodified audit opinion means that the accounts are completely accurate
- if any fraud exists, the auditor would definitely find it
- the auditor has checked every transaction.

In reality, the auditor:

- provides reasonable assurance only,
- does not guarantee the future viability of the entity,
- provides an unmodified opinion when the auditor believes there are not material misstatements in the financial report
- does not guarantee that no fraud exists, although the auditor will take reasonable steps to try to uncover any fraud,
- tests only a sample of transactions.

The standards under which auditors operate could be deficient. Users’ expectations could be reasonable, but beyond what current standards require. This suggests that audit standards could be improved and strengthened in order to meet user expectations in the future.

In addition, it is possible that some auditors do not give users what they require because the auditors are not following the standards. In these cases, the auditors are potentially liable to be sued or face prosecution.

Professional application questions

1.23 Audit reports

Find a copy of a recent audit report and a review report for an Australian company listed on the ASX.

Required

- (a) Explain the relevance of the paragraphs ‘Directors’ responsibility for the financial report’ and ‘Auditor’s responsibility’ in the audit report to the audit expectation gap.**
 - (b) Find the lines in the audit report that express the auditor’s opinion. What sort of opinion is it?**
 - (c) Find the lines in the review report that express the auditor’s conclusion. Is it an audit opinion? Is it a positive or negative statement?**
 - (d) Make a list of the other differences between the audit report and the review report.**
- (a) Explain the relevance of the paragraphs ‘Directors’ responsibility for the financial report’ and ‘Auditor’s responsibility’ in the audit report to the audit expectation gap.**

These paragraphs highlight to readers that the directors of the company and the auditors have separate and distinct responsibilities. The directors are responsible for maintaining the accounting systems and preparing the reports, and the auditors are responsible for conducting an audit of these reports by evaluating their contents against the criteria of the accounting standards and relevant legislation. The auditor’s responsibilities do not include preparing the reports and the auditor must use judgement when choosing procedures and evaluating the evidence.

- (b) Find the lines in the audit report that express the auditor’s opinion – is it an unqualified or modified audit opinion?**

The paragraph is headed ‘Auditor’s opinion’. It states that in the auditor’s opinion the reports are consistent with the relevant legislation including giving a true and fair view of the financial position and performance of the company. This means that the opinion is unqualified and unmodified.

- (c) Find the lines in the review report that express the auditor’s conclusion – is it an audit opinion? Is it a positive or negative statement?**

The auditor expresses a conclusion, not an opinion, in the review report. It is not an opinion because they did not conduct an audit. The statement is a negative one – ‘we have **not** become aware... is **not** in accordance’.

- (d) Make a list of the other differences between the audit report and the review report.**

Other differences include:

Interim report refers to AASB 134 on interim reporting, reference to IFRS in audit relates to adoption of those standards in the annual report.

Audit report refers to audit of remuneration (the company does not make these disclosures in half-yearly report)

Close reading of the description of the work done by the auditor will reveal that the procedures used for the interim report review are less comprehensive than those done for the full year audit (also see reference to ASRE 2410 in interim review). This is the main difference between the reports and why the audit report contains an opinion and the review report expresses a conclusion.

1.24 Non-assurance services

All companies are required to disclose in their annual reports the amounts paid to their auditors for both the financial report audit and any other services performed for the company.

Required

Obtain a copy of a recent annual report (most companies make their annual reports available on the company's website) and find the disclosures explaining the amounts paid to auditors. How much was the auditor paid for the audit and non-assurance, or other, services?

Solution to be guided by lecturer. Solution will depend on the annual report selected by the student.

1.25 Types of assurance engagements

Find an example of a financial report review report issued by an auditor for a publicly listed company.

Required

- (a) What level of assurance is provided by the financial report review?**
- (b) Why would a review be appropriate for a set of half-yearly financial reports?**

(a) What level of assurance is provided by the financial report review?

A review provides limited assurance. The auditor does adequate work to report whether or not anything came to their attention, which would lead them to conclude that the information being assured is not true and fair. Less work is done for a review than for an audit. The auditor provides a negative opinion (nothing came to their attention... not..) for a review.

(b) Why would a review be appropriate for a set of half-yearly financial reports?

To be able to comment on the appropriateness of a review for half-yearly reports, the differences between an audit and a review (and annual and half-yearly reports) should be identified.

Assurance: reasonable vs. limited

Opinion: positive vs. negative

Procedures: nature, timing and extent – review procedures are a subset of those performed for an audit

Reports: annual reports vs. half-year – AASB 134 requires a limited set of disclosures for half-yearly (interim) reporting, and ASRE 2410 requires a limited level of work for a review of interim reports.

Half-yearly reporting is more limited than annual reporting and thus a lower level of assurance is appropriate.

1.26 Corporate sustainability reporting assurance

Find an example of a recent corporate sustainability assurance report for a large company and any audit or review of that report by an auditor.

Required

- (a) Who wrote the assurance report?**
- (b) What level of assurance is provided?**

For the report you are using:

Solution to be guided by lecturer. Solution will depend on the annual report selected by the student.

1.27 Big 4 vs. non-Big 4 Assurance providers

Most audit firms maintain a website that explains the services offered by the firm and provides resources to their clients and other interested parties. The services offered by most firms include both audit and non-audit services.

Required

Find the websites for:

- (a) a Big-4 audit firm**
- (b) a mid-tier audit firm.**

Compare them on the:

- i. range of services provided**
- ii. geographic coverage (i.e. where their offices are located)**
- iii. number of staff and special skills offered**
- iv. industries in which they claim specialisation**
- v. publications and other materials provided to their clients or the general public**
- vi. marketing message.**

The solution will depend on the accounting firm chosen and the date of the analysis. However, the answers should show for the Big 4: greater geographic coverage, larger numbers of staff and broader range of skills offered, greater claims to specialisation and industry coverage, more publications available (particularly from the international offices), more consistent and sophisticated marketing.

1.28 Non-assurance services

Thwin and Partners are a chartered accounting firm with offices in capital cities in most states. The head of the business development department is seeking to grow the firm's revenue from non-audit services.

Required

What non-audit services could a chartered accounting firm provide to its listed company clients? Explain why a company would buy these services from its audit firm instead of another consulting firm.

As discussed in detail in chapter 2 of the text, there are potential conflicts of interest if an audit firm also performs other work for a client. For example, an accounting firm could provide consulting services on installation of a computer system, and then be engaged to audit the client's accounting records that were produced by that system. There is potential for the auditor to miss mistakes in the accounting reports through either ignorance (not realising there was a fundamental error in the system that affected the accuracy of the accounting reports) or bias (deciding not to pursue an issue that potentially was caused by the accounting firm's consulting work not being sufficiently rigorous).

However, provided the audit firm was not effectively auditing its own work in the manner described above, its consulting division could provide a valuable service to the company because it was familiar with the company and could understand its needs and how best to meet them.

Possible non-audit services that could be provided by a chartered accounting firm to its listed company clients include:

- Tax advice
- Strategy development advice
- Finance advice
- Supply chain management
- IT services – systems
- Risk management
- Sustainability reporting and assurance
- Finance and actuarial services

The issue of non-audit services provided by auditors has been the focus of a recent parliamentary inquiry into audit quality. A concern is that the quality of the audit delivered may be impeded by the nature and amount of non-audit services provided to their audit clients. For details on the inquiry and their recommendations refer to:

[https://www.aph.gov.au/Parliamentary_Business/Committees/Joint/Corporations and Financial Services/RegulationofAuditing](https://www.aph.gov.au/Parliamentary_Business/Committees/Joint/Corporations_and_Financial_Services/RegulationofAuditing)

1.29 Corporate sustainability reporting assurance

Livable Endeavors Pty Ltd is a consulting firm specialising in sustainability and climate change issues. It offers sustainability report assurance services to a variety of organisations, including listed companies. It is not a registered company auditor and does not provide company audits.

Required

Why would a listed company obtain sustainability assurance services from a consulting firm and its company audits from a chartered accounting firm?

As discussed in detail in chapter 2 of the text, there are potential conflicts of interest if an audit firm also performs other work for a client. For example, an accounting firm could provide consulting services on installation of a computer system, and then be engaged to audit the client's accounting records that were produced by that system. There is potential for the auditor to miss mistakes in the accounting reports through either ignorance (not realising there was a fundamental error in the system that affected the accuracy of the accounting reports) or bias (deciding not to pursue an issue that potentially was caused by the accounting firm's consulting work not being sufficiently rigorous).

Sustainability reporting (preparation of the report or assurance) would not create a conflict of interest in most cases because the information being provided in the sustainability report is not integral to the financial report being assured.

However, companies could prefer to engage another consulting firm to prepare or assure a sustainability report because the other firm could be an expert in that type of service, or a greater expert than the audit firm engaged to do the financial report assurance.

1.30 Big-4 vs. non-Big-4 Assurance providers

Section 301 of the Corporations Act requires companies to have their financial reports audited. Academic research suggests that Big-4 auditors charge higher fees than other auditors and their audit reports are more credible than those issued by other auditors.

Required

In times of economic recession would you expect:

(a) the demand for audits to increase or decrease?

(b) clients to shift from large (Big-4) auditors to smaller auditors, or from smaller auditors to Big-4 auditors? Why or why not?

(a) the demand for audits to increase or decrease?

Financial report audits are mandatory for most companies, so overall demand is largely fixed or determined by economic conditions affecting the number of companies. However, for organisations that are not required by legislation to have an audit, there are two opposing pressures in times of economic recession. First, cost-cutting would result in fewer audits. Second, organisations with less credible financial reports will face most difficulty in borrowing during a credit squeeze. This suggests that demand for auditing will increase in difficult times, because an audit will increase the credibility of the reports and thus increase access to external finance.

(b) clients to shift from large (Big-4) auditors to smaller auditors, or from smaller auditors to Big-4 auditors? Why or why not?

Shifting from a smaller auditor to a Big 4 auditor would increase both costs and financial reporting credibility for a company. Therefore, it can be argued that firms with greater need to reduce costs will shift 'down' from Big 4 auditors to smaller auditors, but firms with greater need for credibility (and financial advice) will shift 'up' from smaller auditors to Big 4 auditors.

1.31 Corporate Sustainability Reporting Assurance Standards

Providers of corporate sustainability assurance reports often state that the work was performed in accordance with ISAE 3000 and/or ASRE 2405. Obtain a copy of each of these documents.

Required

Explain why ISAE 3000 and ASRE 2405 would be useful in CSR assurance.

ISAE 3000 *International Standard on Assurance Engagements (Revised) Assurance engagements other than audits or reviews of historical financial information* is issued by the IAASB, and the most recent revisions apply for assurance reports dated on or after December 15, 2015. It deals with assurance engagements other than audits or reviews of historical financial information. It applies to both reasonable assurance and limited assurance situations.

Because ISAE 3000 applies to assurance of information or reports other than historical financial information reports, it does cover the situation where an entity has provided a CSR and wishes to gain a review or audit of that information. Its application paragraph A8 specifically lists an engagement for the assurance on a report of sustainability performance as an example where its use would be appropriate.

Appendix 4 contains examples of subject matters that are relevant to the type of assurance engagements covered by the standard, it includes a list of reports containing non-financial historical information:

- Greenhouse gas statements
- Sustainability reports
- Corporate social responsibility reports

ASRE 2405 *Review of Historical Financial Information Other than a Financial Report* is issued by the AUASB. It establishes mandatory requirements on an assurance practitioner when engaged to undertake a review of historical financial information other than a financial report.

It is relevant to reviews (that is, not audits) of financial information and therefore relate to the situation where there is a limited assurance rather than reasonable assurance of financial information.

ASRE 2405 is specifically relevant to financial information, rather than social or environmental information. It would be relevant to financial metrics that are included in a sustainability report.

1.32 Expectations gap

IdealProtect Limited (IdealProtect) has been an audit client of Celestia & Associates (C&A) for the past 15 years. IdealProtect is based in Toowoomba, where it manufactures high-tech armour-plated personnel carriers. IdealProtect often has to go through a competitive market tender process to win large government contracts. Its main product, the small but powerful Territory Grappler, is highly specialised and IdealProtect does business only with nations that have a recognised, democratically elected government. IdealProtect maintains a highly secure environment because of the sensitive and confidential nature of its vehicle designs and its clients.

Myah Roberts has been the engagement partner on the IdealProtect audit for the last five years. Myah is a specialist in auditing clients in the defence industry and intends to remain as review partner when the audit is rotated next year to a new partner (Theo Luna, who is to be promoted to partner to enable him to sign-off on the audit).

The board of IdealProtect is considering issuing half-yearly financial reports in addition to its full-year financial reports and has approached the audit partner, Myah Roberts, to discuss the possibility of engaging the firm to discuss the audit implications. Myah suggests that C&A could review the half-yearly financial reports.

IdealProtect's end of financial year is 30 June.

Source: Adapted from the CA Program's Audit & assurance exam, May 2008.

Required

Discuss the expectations gap that could exist for the audit of IdealProtect. Consider the existence of any special interests of the users of IdealProtect's financial reports.

The expectations gap is the difference between the expectations of financial report users and the auditor's performance. The audit report format has been changed to reduce this gap. Changes include the inclusion of the opinion at the start of the report rather than at the end and greater details of the work performed by the auditor in arriving at their opinion.

Special users for IdealProtect could include:

- Government agencies, including Department of Foreign Affairs and Trade, who would be interested in the purchases by foreign governments and individuals of this type of security vehicle.
- Competing companies and/or governments who would be interested in sensitive information about the construction of the vehicles and the identity of the purchasers.

- Toowoomba local government and Queensland State Government, who would be interested in the financial viability of the business and its impact on local employment and economic activity.
- Suppliers of technological equipment – it is possible that the Territory Grappler uses specialised components. These suppliers would be interested in the financial viability of the business and the likelihood of its timely payment for goods purchased on credit. Such equipment could be made to specialised order with limited alternative customers. The suppliers would have large investments to support the manufacture of these specialised components.
- Other potential customers
- Usual relationships would exist with lenders, shareholders, employees.

Discussion:

Consider how well IdealProtect's financial reports would provide the information that these users would require, given the highly sensitive and confidential nature of the manufacturing process. Management is responsible for preparing the reports, but the users may look to the auditors to make sure that the required information is provided. Also consider how well the audit process would be able to meet the users' needs for this information.

1.33 Being an auditor

You have recently graduated from your university course and start work with an audit firm. You meet an old school friend, Lena, for dinner — you haven't seen each other for several years. Lena is surprised that you are now working as an auditor because your childhood dream was to be a flamenco dancer. Unfortunately, your knees were damaged in a fall and you can no longer dance. The conversation turns to your work and Lena wants to know how you do your job. Lena cannot understand why an audit is not a guarantee the company will succeed. Lena also thinks that company managers will lie to you in order to protect themselves, and as an auditor you would have to assume that you cannot believe anything a company manager says to you.

Required

- (a) Write a letter to Lena explaining the concept of reasonable assurance, and how reasonable assurance is determined. Explain why an auditor cannot offer absolute assurance.**
 - (b) Explain in the letter to Lena the concept of 'professional scepticism' and how it is not the same as assuming that managers are always trying to deceive auditors.**
- (a) Write a letter to Lena explaining the concept of reasonable assurance, and how reasonable assurance is determined. Explain why an auditor cannot offer absolute assurance.**

There is a gap between Lena's expectations and the level of auditor performance. An audit provides reasonable assurance, not absolute assurance. The audit enhances the reliability and credibility of the information included in a financial report but is not a guarantee that the financial report is free from error or fraud, or that the company will not fail. Partly, this is because of the nature of financial reporting. It requires judgements about accounting estimates and the choice and application of various accounting methods. There is usually not one 'right' answer for a company's profit. The auditor cannot guarantee the profit reported by the company is 'right', only provide assurance about the appropriateness of the accounting method selection and application and the accounting estimates. Another reason the assurance is not absolute is the nature of the audit process. Auditors cannot review every transaction and account balance, therefore they use sampling (which could mean that representative items are not selected for testing). Some transactions and balances are difficult to gather reliable evidence about, clients can conceal evidence, and auditors have a limited time frame in which to complete the audit.

- (b) Explain in the letter to Lena the concept of 'professional scepticism' and how it is not the same as assuming that managers are always trying to deceive auditors.**

Professional scepticism is required of an auditor. It is an attitude that requires the auditor to remain independent of the client and its staff. The auditor has a questioning mind and thoroughly investigates all evidence presented by their client. This does not mean that they regard the client as a liar, but that they need to do more than simply take the client's word about anything. Usually, there will be confirming evidence which

supports the client's statements (e.g. copies of contracts, minutes of meetings, etc.). Evidence gathered from independent third parties is generally regarded as more reliable than that gathered from the client. Managers will not always try to deceive auditors, but auditors must take the responsibility of gathering evidence to verifying managers' statements. The auditor needs to be alert to the fact that some managers will try to deceive auditors sometimes.

1.34 Company auditor registration

Anyone wishing to become a registered company auditor has to comply with certain requirements, as outlined in section 1280 of the Corporations Act. The requirements were changed by the passage of the CLERP 9 legislation in 2004, potentially making it easier for auditors in regional or rural areas to meet the experience requirements. You have graduated from your accounting course and believe that although you have not had much experience working with auditors, you are capable of meeting all the requirements and being a good auditor.

Required

Visit the ASIC website and locate the guidance for meeting the regulatory requirements for company auditor registration. Summarise those requirements and explain what is required for registration for anyone with a completed accounting degree.

<https://asic.gov.au/for-finance-professionals/company-auditors/applying-for-auditor-or-authorised-audit-company-registration/>

ASIC, Regulatory Guide 180, Auditor Registration (2016), available at:

<https://download.asic.gov.au/media/3975923/rg180-published-11-august-2016.pdf>

Table 1: Eligibility requirements for registration as an RCA

Qualifications: s1280(2)(a)	Skills: s1280(2)(b)	Capable, fit and proper: s1280(2)(c)
You must: • have the prescribed academic qualifications AND have completed a prescribed course in auditing; OR • have other qualifications and experience that ASIC considers equivalent to both these requirements.	You must: • satisfy all the components of an ASIC-approved competency standard (see RG 180.3–RG 180.5); OR • have the prescribed level of practical experience OR experience that ASIC considers equivalent.	You must: • be capable of performing the duties of an auditor; AND • be a fit and proper person to be registered as an auditor.

1.35 ASIC and CALDB

You are a trainee auditor working for a small audit firm. You completed your accounting degree at the end of last year and although you have not yet had much experience, you are concerned at some of the practices and procedures adopted at your audit firm. You overhear the two partners, Harrison and Nixon, discussing some problems they are facing with a particular client. Harrison is advising Nixon to ‘get the paperwork right’ on the audit, otherwise they will be in trouble if they get selected for the ASIC inspection program. Harrison is also concerned that ‘the CADB will be after them’. After the conversation, Nixon comes to you to ask if you, as a recent graduate, know anything about the ASIC inspection program and the CADB. Nixon confesses that he hasn’t been keeping up to date.

Required

Write a report to Nixon explaining (i) ASIC’s audit inspection program and (ii) the CADB and how it operates.

Refer to review question 1.20 for a discussion of review of audit quality ASIC and its role in referring auditors to the CADB.

ASIC inspections and reports can be found here: <https://asic.gov.au/regulatory-resources/financial-reporting-and-audit/auditors/asic-audit-inspections/>

Information about the CADB can be found here: <https://www.cadb.gov.au/>

1.36 Demand for assurance

In 2002, the audit firm Arthur Andersen collapsed following charges brought against it in the United States relating to the failure of its client, Enron. Some other clients announced that they would be dismissing Arthur Andersen as their auditor even before it was clear that Arthur Andersen would not survive.

Required

Using the theories outlined in this chapter on the demand for audit, explain some reasons why these clients took this action.

The three theories discussed in the chapter are agency theory, the information hypothesis and the insurance hypothesis.

Agency theory suggests that there are incentives to hire an auditor to assess the truth and fairness of the information contained in the financial report. The auditor reports to the members on the truth and fairness of the financial report prepared by the manager. The good quality managers are willing to have the audit of their reports because it allows them to distinguish themselves from poor quality managers (auditing is a bonding activity). Shareholders are willing to pay the audit fee (i.e. the audit fee is paid by the company, reducing the profit available to distribute to the shareholders) to monitor the managers (who are their agents). Good quality auditors are more highly valued for this bonding and monitoring function than poor quality auditors. Andersen's lowered their quality through their involvement with Enron, leading some companies to prefer another auditor. It has been suggested that companies taking early action to dismiss Enron could have protected their share price by retaining their financial reporting credibility. Ultimately, all Andersen's clients had to find another auditor.

The information hypothesis suggests that financial report users value higher quality information. Higher quality auditors are associated with higher quality financial reports. Therefore, when Andersen's quality was called into question by their association with Enron, their client companies that valued higher quality auditors switched to another auditor.

The insurance hypothesis suggests that investors insure against their losses from company failure by purchasing an audit. When Andersen's credibility was damaged by the Enron affair, there was doubt about their ability to survive and provide the insurance for such losses. The insurance factor is 'impounded' into share prices, so when the insurance cover is lost the share price should fall. This means that companies that were more sensitive to the loss of the insurance cover were more likely to dismiss Andersen's early.

1.37 Performance and compliance audits

Canterlot Chartered Accountants is a successful mid-tier accounting firm with a large range of clients across Australia. During the 2020 year, Canterlot gained a new client, Cloudsdale Medical Group (CMG), which owns 100 per cent of the following entities:

- Everfree Forest Hospital, a private hospital group
- Calendula Care Pty Ltd, a private nursing home
- Tempo Cancer Treatment Limited (TCTL), a private oncology clinic that specialises in the treatment of cancer.

Year end for all CMG entities is 30 June.

TCTL owns two relatively old linear accelerators used in radiation therapy. Recently, radiographers using these linear accelerators have raised concerns that they have adverse radiation effects on patients.

TCTL also wishes to purchase a new, more technologically advanced linear accelerator. The Department of Health funded half the purchase price on the basis that TCTL followed the Department's 'Guidelines for procurement of medical equipment' when purchasing the accelerator. The Department of Health has engaged the Auditor-General to check that TCTL met the terms of the funding agreement.

The Auditor-General has also been asked to conduct a performance audit that examines how well hospitals manage waste. Hospitals generate significant amounts of waste, both general and clinical. General waste is not dangerous and can be disposed of more cheaply than clinical waste.

Five years ago, the federal government measured the amount of hospital waste produced in terms of quantity and cost of disposal. The government then set an objective for hospitals to improve how they manage waste and published a document titled 'Waste management guidelines'.

The aims of the Auditor-General's performance audit include assessing whether:

1. improvements have occurred
2. hospitals have reduced the amount of waste produced
3. hospitals have reduced the cost of waste disposal.

The Auditor-General's preliminary findings indicate that many hospitals do not have processes for segregating general and clinical waste. These hospitals treat all waste as clinical waste.

Source: Adapted from the CA Program's Audit & assurance exam, December 2008.

Required

- (a) Discuss the relevant criteria against which the Auditor-General will check TCTL's compliance with the terms of the funding agreement.**
- (b) Identify two criteria the Auditor-General can use to examine how well hospitals manage waste.**

- (a) Discuss the relevant criteria against which the Auditor-General will check TCTL's compliance with the terms of the funding agreement.**

TCTL must comply with the Department's 'Guidelines for procurement of medical equipment' when purchasing the accelerator. We are not provided with this document, but it is likely to contain rules about approved suppliers, the tendering/purchasing process (including the type of supplier/equipment documentation required), and so on. The auditor will gather evidence about TCTL's purchases of the linear accelerators and assess whether the guidelines were followed. If the guidelines are specified with a great deal of detail, the audit will focus on ensuring that these guidelines were followed as specified. If the guidelines are expressed loosely (e.g. 'the firm should obtain a number of quotes'), the auditor will need to use more judgement to assess compliance than if the guidelines are expressed precisely (e.g. 'the firm will obtain 3 quotes'). The auditor will have to decide if the number of quotes obtained in those circumstances is sufficient to satisfy the loosely expressed guidelines. Are two quotes sufficient? If three quotes are required, the auditor could decide that two quotes are not sufficient, unless there are extenuating circumstances (e.g. there are only two possible suppliers worldwide).

- (b) Identify two criteria the Auditor-General can use to examine how well hospitals manage waste.**

The performance audit examines economy, efficiency and effectiveness. The Auditor General would consider criteria across all three dimensions. Some possibilities include:

Economy – cost of disposing of waste, cost of employees in waste disposal area, cost of transport of waste, tipping fees etc. – partition into general and clinical waste.

Efficiency – waste by weight, volume, and/or cost per patient, per department or ward (general and clinical).

Effectiveness – Extent of achievement of hospital's planned improvements; Total reduction in general and clinical waste (volume, cost, method of disposal); effectiveness at sorting general and clinical waste.

Case Study – Crest Outfitters

1. Why might Crest Outfitters wish to disclose information – both financial and non-financial – to the public when the Corporations Act doesn't require them to? What benefit is it to them? Could there be any negative consequences?

The company prides itself on its transparency – therefore volunteering to disclose information to customers, suppliers and others who are looking at the company helps support their organisational objective of transparency in what they do. This can be used to build trust with their customers.

Other benefits that are likely to be available also include the potential for lower interest rates if Crest Outfitters ever sought to obtain larger financing from a bank or other lender. The entity may also be able to obtain more generous credit terms for purchases made from suppliers.

With regards to negative consequences, Crest Outfitters must be careful in disclosing information – especially information that might shed light on some of the company's competitive advantages. This is the case for all entities that are required to report due to government or exchange requirements. Much information is disclosed in annual reports but entities should be sure that they do not reveal information that competitors may use against them.

2. How would Felix explain the differences between the various types of assurance engagements? In answering this question, differentiate between a financial report audit and assurance on their climate emissions report and climate neutral certification.

Crest Outfitters are confused about the difference between reasonable assurance, limited assurance and no assurance engagements.

There are two levels of assurance that may be provided over the financial statements – reasonable and limited. Reasonable assurance is defined in ASA200.04

“Reasonable assurance is a high level of assurance. It is obtained when the auditor has obtained sufficient appropriate audit evidence to reduce audit risk (that is, the risk that the auditor expresses an inappropriate opinion when the financial report is materially misstated) to an acceptably low level. However, reasonable assurance is not an absolute level of assurance, because there are inherent limitations of an audit which result in most of the audit evidence on which the auditor draws conclusions and bases the auditor's opinion being persuasive rather than conclusive.”

The AUASB's Framework for Assurance Engagements (2014) also provides useful information on the difference between reasonable and limited assurance in paragraphs 14 & 15.

“Reasonable Assurance Engagements and Limited Assurance Engagements

14. In a reasonable assurance engagement, the assurance practitioner reduces engagement risk to an acceptably low level in the circumstances of the engagement as the basis for the assurance practitioner's conclusion. The

assurance practitioner's conclusion is expressed in a form that conveys the assurance practitioner's opinion on the outcome of the measurement or evaluation of the underlying subject matter against criteria.

15. In a limited assurance engagement, the assurance practitioner reduces engagement risk to a level that is acceptable in the circumstances of the engagement but where that risk is greater than for a reasonable assurance engagement as the basis for expressing a conclusion in a form that conveys whether, based on the procedures performed and evidence obtained, a matter(s) has come to the assurance practitioner's attention to cause the assurance practitioner to believe the subject matter information is materially misstated. The nature, timing, and extent of procedures performed in a limited assurance engagement is limited compared with that necessary in a reasonable assurance engagement but is planned to obtain a level of assurance that is, in the assurance practitioner's professional judgement, meaningful. To be meaningful, the level of assurance obtained by the assurance practitioner is likely to enhance the intended users' confidence about the subject matter information to a degree that is clearly more than inconsequential. “

In terms that would be more understandable by Crest Outfitter's staff – reasonable assurance is providing assurance that the financial statements are free from material misstatements – but this is not a guarantee because the auditors do not examine every single transaction item. A limited level of assurance is when the auditors provide their opinion over only the evidence they've gathered, not the entirety of the financial statements.

The audit team should also raise with Crest Outfitters that assurance over other information besides general purpose financial statements are covered under ISAE 3410 – and our assurance report can provide reasonable or limited assurance. The principles remain the same about differentiating between the levels of assurance, even though the subject matter is different.

Research question

Chong and Pflugrath conducted a study of different audit report formats and their effects on the audit expectation gap. They investigated whether report length (long or short), the location of the audit opinion (at the start or the end) and plain language (instead of technical language) affect shareholders' and auditors' perceptions of the audit. They surveyed a sample of shareholders and auditors and concluded that the responses indicate there are only minor effects on the audit expectation gap from using different report formats.

Required

(a) In your view, what should be contained in an audit report that conveys realistic explanations of the auditor's role and the assurance provided by the audit report?

(b) Do you believe that auditors are correct in dismissing users' expectations as 'unrealistic'? Should auditors be trying to meet these expectations by rethinking their role and changing their approach?

(a) In your view, what should be contained in an audit report that conveys realistic explanations of the auditor's role and the assurance provided by the audit report?

The question asks for the student's view. The student should propose a standard audit report format with justification for each section. The factors to be considered include: report length, location of the audit opinion, plain or technical language. If the student regards the current audit report as the most appropriate, justification should still be provided and the student should discuss how the report conveys realistic expectations of the auditor's role and the level of assurance provided. The students should provide evidence of different possible audit report formats as part of their discussion.

(b) Do you believe that auditors are correct in dismissing users' expectations as 'unrealistic'? Should auditors be trying to meet these expectations by rethinking their role and changing their approach?

The arguments supporting auditors' current practices and the users' alternative expectations should be researched and discussed. Are there any arguments to support the auditors' position that could not be regarded as merely defending existing practices? Are there any arguments to support critics who suggest that auditors should be doing more? Recent changes to the law suggest that regulators are willing to reconsider the auditor's role (e.g. banning certain non-audit services, requiring an independence declaration, requiring audit partner rotation). If auditors proactively adopt these types of changes, is it possible that more draconian regulatory changes could be avoided?
