

Biology: The Core, 2e (Simon)

Chapter 1 An Introduction to the Science of Life

1) How is life defined?

- A) The only requirement for life is the ability to reproduce.
- B) Life is defined through a set of shared characteristics that all living things display.
- C) A living thing must be able to move.
- D) Life is determined by neural activity.

Answer: B

Module: 1.1

Skill: Remembering/Understanding

Learning Outcome: 1.1

Global Learning: G2

2) Fire can move, grow, reproduce, use energy, consume oxygen, and interact with its environment. Why is it not alive?

- A) It does not have cells.
- B) It does not consist of complex, well-ordered structures.
- C) It does not pass on genes for traits to its offspring.
- D) All of the above are correct.

Answer: D

Module: 1.1

Skill: Applying/Analyzing

Learning Outcome: 1.1

Global Learning: G2

3) Is a virus alive?

- A) Yes, it possesses all of the requirements for life.
- B) Yes, it possesses enough of the requirements for life to be considered living.
- C) No, it does not possess all of the requirements for life.
- D) No, it does not possess any of the requirements for life.

Answer: C

Module: 1.1

Skill: Applying/Analyzing

Learning Outcome: 1.1

4) Which property or properties of life does a virus possess?

- A) A virus has order.
- B) A virus has cells.
- C) A virus can reproduce on its own.
- D) All of the above are properties that a virus possesses.

Answer: A

Module: 1.1

Skill: Applying/Analyzing

Learning Outcome: 1.1

- 5) Certain parasites, such as intestinal tapeworms, cannot survive outside of the host. Why are they still considered alive?
- A) Survival outside of a host is not a requirement for life.
 - B) They are still considered alive because they are studied by biologists, and biology is the study of life.
 - C) As long as they are made of cells, they are considered to be alive.
 - D) Because they cannot survive outside of the host, parasites are not considered alive.

Answer: A

Module: 1.1

Skill: Evaluating/Creating

Learning Outcome: 1.1

Global Learning: G2

- 6) A population consists of _____.
- A) living and nonliving components
 - B) interacting populations
 - C) a group of interacting individuals of one species
 - D) a group of interacting individuals from different species

Answer: C

Module: 1.2

Skill: Remembering/Understanding

Learning Outcome: 1.2

- 7) The statement, "There are 628 squirrels living on campus," describes the _____ of squirrels on campus.
- A) species
 - B) community
 - C) population
 - D) ecosystem

Answer: C

Module: 1.2

Skill: Evaluating/Creating

Learning Outcome: 1.2

- 8) What is the smallest unit of life?
- A) An atom
 - B) A molecule
 - C) A cell
 - D) An organism

Answer: C

Module: 1.2

Skill: Applying/Analyzing

Learning Outcome: 1.2

9) If you were to combine all of the ecosystems on the planet, you would have the _____.

- A) ionosphere
- B) troposphere
- C) biosphere
- D) envirosphere

Answer: C

Module: 1.2

Skill: Remembering/Understanding

Learning Outcome: 1.2

10) A college campus — including the students, birds, trees, sidewalks, and air — makes up one complete _____.

- A) community
- B) ecosystem
- C) population
- D) organism

Answer: B

Module: 1.2

Skill: Applying/Analyzing

Learning Outcome: 1.2

11) Skin is sometimes referred to as the largest organ of the body. Why is skin considered to be an organ and not a tissue or some other structure?

- A) Skin consists of multiple cell types functioning as a single integrated unit.
- B) Skin consists of multiple tissue types that cooperate to perform a specific task.
- C) Skin is a vital component of multiple organ systems.
- D) Skin consists of a single cell type.

Answer: B

Module: 1.2

Skill: Evaluating/Creating

Learning Outcome: 1.2

Global Learning: G2

12) Which of the following is the correct organizational hierarchy, from largest to smallest, in the hierarchical order of life? (Some levels have been omitted, so you are looking for the correct order.)

- A) Community → Ecosystem → Population → Tissue → Organ → Cell → Organelle → Atom
- B) Ecosystem → Community → Population → Organ → Tissue → Cell → Molecule → Atom
- C) Biosphere → Community → Population → Tissue → Organ → Cell → Atom → Molecule
- D) Ecosystem → Population → Community → Organ system → Organ → Cell → Molecule → Atom

Answer: B

Module: 1.2

Skill: Applying/Analyzing

Learning Outcome: 1.2

13) Beginning with an atom and working up to the entire planet, biologists view life as arranged from _____.

- A) small and simple to large and complex
- B) small and complex to large and simple
- C) large and complex to large and simple
- D) large and complex to small and simple

Answer: A

Module: 1.2

Skill: Remembering/Understanding

Learning Outcome: 1.2

14) What is typically the first step in the scientific method?

- A) Experiment
- B) Hypothesis
- C) Prediction
- D) Observation

Answer: D

Module: 1.3

Skill: Remembering/Understanding

Learning Outcome: 1.3

Global Learning: G1

15) The scientific method _____.

- A) is a rigid methodology that must be precisely followed to ensure validity
- B) is a rough recipe for answering questions, but the steps need not be performed in the same order as outlined
- C) is undertaken only by trained scientists in a controlled laboratory setting
- D) is the means by which absolute truth can be uncovered

Answer: B

Module: 1.3

Skill: Applying/Analyzing

Learning Outcome: 1.3

Global Learning: G1

16) A recent commercial advertised for a wristband that claimed to restore health and balance by taking advantage of natural frequencies of your biofield. It supports its claim by showing several people first struggling to balance without the wristband and then balancing fine with the wristband. Why should you be skeptical of the claims made in this ad?

- A) Health cannot be tested via the scientific method.
- B) You cannot believe anything you see on television.
- C) The study was too objective.
- D) It was not a controlled experiment.

Answer: D

Module: 1.3

Skill: Applying/Analyzing

Learning Outcome: 1.3

Global Learning: G1, G5, G6

Use the following study to answer the following question(s): A current trend among professional baseball players is to wear braided titanium necklaces. The titanium reportedly regulates the flow of energy through the body. The player wearing the necklace then improves strength, tires less, and recovers more quickly.

17) If you were to evaluate these claims using the scientific method, what would be the first step?

- A) Conduct an experiment.
- B) Gather testimonials.
- C) Develop a hypothesis.
- D) Evaluate the results.

Answer: C

Module: 1.3

Skill: Applying/Analyzing

Learning Outcome: 1.3

Global Learning: G1, G2

18) Which of the following would be the strongest evidence for or against the necklace's effectiveness?

- A) A bar graph comparing the percentage of players who do with the percentage of players who do not wear the necklace
- B) A scatter plot showing days on the disabled list and percentage of players who do or do not wear the necklace
- C) A bar graph illustrating the satisfaction levels of the players who wear the necklace
- D) A bar graph comparing batting averages of the players who wear the official titanium necklace and those who were unknowingly wearing a fake titanium necklace

Answer: D

Module: 1.3

Skill: Applying/Analyzing

Learning Outcome: 1.3

Global Learning: G1, G3

19) What should one do if the results of an experiment consistently do not support the original hypothesis?

- A) Change the hypothesis to match the results.
- B) Change the results to match the hypothesis.
- C) Accept the original hypothesis.
- D) Reject the original hypothesis and formulate a new hypothesis.

Answer: D

Module: 1.3

Skill: Applying/Analyzing

Learning Outcome: 1.3

Global Learning: G1

20) Gathering information just to add to the knowledge base, such as measuring the beak length of various bird species, is known as _____.

- A) discovery science
- B) applied science
- C) hypothesis-driven science
- D) investigative science

Answer: A

Module: 1.3

Skill: Applying/Analyzing

Learning Outcome: 1.3

Global Learning: G1

21) What does the term *theory* mean to a scientist?

- A) A guess
- B) A proposed explanation for an observed phenomenon
- C) A hypothesis that has been supported by the evidence of an experiment
- D) A broad hypothesis that has been supported by a large number of experiments

Answer: D

Module: 1.3

Skill: Remembering/Understanding

Learning Outcome: 1.3

Global Learning: G1

Use the following study to answer the following question(s): A researcher applies varying amounts of fertilizer (0, 2, 4, 8, 10 units) to 50 potted tomato plants. All other variables that may affect the outcome (watering, temperature, sunlight, plant size, etc.) are kept the same from pot to pot. At the end of the growing season, the tomatoes grown on each plant are weighed to determine which fertilizer level produces the largest tomato yield.

22) Which variable is the independent variable?

- A) Temperature
- B) Yield
- C) Fertilizer amount
- D) Plant size

Answer: C

Module: 1.4

Skill: Evaluating/Creating

Learning Outcome: 1.4

Global Learning: G1

23) Which variable is the dependent variable?

- A) Temperature
- B) Yield
- C) Fertilizer amount
- D) Plant size

Answer: B

Module: 1.4

Skill: Evaluating/Creating

Learning Outcome: 1.4

Global Learning: G1

24) Is the study presented above a controlled experiment?

- A) Yes, because only the amount of fertilizer was changed, everything else was kept the same.
- B) Yes, because many pots were used.
- C) No, because the experiment was done only once.
- D) No, because several different amounts of fertilizers were used, not just one amount.

Answer: A

Module: 1.4

Skill: Applying/Analyzing

Learning Outcome: 1.4

Use the following information to answer the following question(s): You wake up one morning feeling slightly under the weather. A close family member enthusiastically suggests that you take some Echinacea, an herb commonly used as a cold remedy. You then decide to design an experiment to test Echinacea and see if this claim is true. You think, "If taken at the beginning of a cold, Echinacea will reduce cold symptoms."

25) Your statement, "If taken at the beginning of a cold, Echinacea will reduce cold symptoms," is called a(n) _____.

- A) observation
- B) hypothesis
- C) conclusion
- D) theory

Answer: B

Module: 1.3

Skill: Applying/Analyzing

Learning Outcome: 1.3, 1.4

Global Learning: G1

26) You decide to test the effects of Echinacea on 100 people who are experiencing similar cold symptoms. Which of the following groups would represent an appropriate control in your experiment?

- A) One healthy person given Echinacea tablets
- B) One sick person given Echinacea tablets
- C) 100 healthy people given tablets similar to Echinacea but with no herb
- D) 100 sick people given tablets similar to Echinacea but with no herb

Answer: D

Module: 1.4

Skill: Applying/Analyzing

Learning Outcome: 1.3, 1.4

Global Learning: G1

27) If you give 100 sick people tablets similar to Echinacea but with no herb, what kind of control would this be?

- A) A positive control
- B) A negative control
- C) A blind control
- D) A double-blind control

Answer: B

Module: 1.4

Skill: Evaluating/Creating

Learning Outcome: 1.4

Global Learning: G1

28) You conduct the experiment and gather the data presented in the figure below. Given the results, you can say that _____.

- A) your theory is proven
- B) your theory is disproven
- C) your hypothesis is not supported
- D) your hypothesis is supported

Answer: D

Module: 1.3

Skill: Applying/Analyzing

Learning Outcome: 1.3, 1.4, 1.6

Global Learning: G1, G3

29) Which of the following represents a double-blind study?

- A) The test group knows whether they are receiving a placebo or the actual treatment, and so do the researchers.
- B) The test group does not know whether they are receiving a placebo or the actual treatment, but the researchers do.
- C) The test group knows whether they are receiving a placebo or the actual treatment, but the researchers do not know until all the data are collected.
- D) Neither the test group nor the researchers know whether the test group is receiving a placebo or the actual treatment until all the data are collected.

Answer: D

Module: 1.4

Skill: Applying/Analyzing

Learning Outcome: 1.3, 1.4

Global Learning: G1

30) Which of the following represents a blind study?

- A) The test group knows whether they are receiving a placebo or the actual treatment, and so do the researchers.
- B) The test group does not know whether they are receiving a placebo or the actual treatment, but the researchers do.
- C) The test group knows whether they are receiving a placebo or the actual treatment, but the researchers do not know until all the data are collected.
- D) Neither the test group nor the researchers know whether the test group is receiving a placebo or the actual treatment until all the data are collected.

Answer: B

Module: 1.4

Skill: Applying/Analyzing

Learning Outcome: 1.3, 1.4

Global Learning: G1

31) Many medical studies include a control group in which patients receive a medically ineffective treatment that resembles the treatment tested. What do we call the ineffective treatment?

- A) The placebo
- B) The dependent variable
- C) The controlled experiment
- D) The hypothesis

Answer: A

Module: 1.4

Skill: Applying/Analyzing

Learning Outcome: 1.4

Global Learning: G1, G5

32) Many medical studies show that patients who receive a treatment feel better even if the treatment was an ineffective sugar pill. What is this phenomenon called?

- A) The control group
- B) The placebo effect
- C) The fake effect
- D) The blind effect

Answer: B

Module: 1.4

Skill: Applying/Analyzing

Learning Outcome: 1.3, 1.4

Global Learning: G1, G5

33) Which of the following statements cannot be tested by science?

- A) Male lions sleep 20 hours a day.
- B) Male lions have brown manes.
- C) It is wrong that male lions kill baby lions when taking over a new pride.
- D) All statements can be tested by science.

Answer: C

Module: 1.5

Skill: Evaluating/Creating

Learning Outcome: 1.3

Global Learning: G1

34) A well-substantiated explanation of some aspect the natural world, based on a body of facts that have been repeatedly confirmed through observations and experiments, is referred to as a(n)

-
- A) idea
 - B) hypothesis
 - C) theory
 - D) fact

Answer: C

Module: 1.3

Skill: Remembering/Understanding

Learning Outcome: 1.3

Global Learning: G1

35) You want to know whether cookies made with unbleached flour taste better than cookies made with bleached flour; which of the following has the strongest experimental design to test this question?

- A) Make two batches of cookies, both with bleached flour; one taster tries both types and ranks which type he likes best.
- B) Make two batches of cookies, one with bleached flour and one with unbleached flour; one taster tries both types and ranks which type he likes best.
- C) Make two batches of cookies, one with bleached flour and one with unbleached flour; twenty tasters try both types and rank which type they like best.
- D) Make two batches of cookies, one with bleached flour and one with unbleached flour; twenty tasters try both types without knowing which ones they are eating and rank which type they like best.

Answer: D

Module: 1.4

Skill: Evaluating/Creating

Learning Outcome: 1.3, 1.4

Global Learning: G1, G2

36) What is misleading about commercials that show "scientific proof" that laundry detergent X is better than another leading brand?

A) We are shown only one tee-shirt becoming whiter in each detergent, not 20 tee-shirts in each detergent.

B) We do not know whether the same amount of each detergent was used for washing.

C) We do not know if everything besides the detergents was the same (machine used, type of stains, etc.).

D) All of the above are aspects that are misleading.

Answer: D

Module: 1.5

Skill: Applying/Analyzing

Learning Outcome: 1.3, 1.4

Global Learning: G1, G5, G6

37) A controlled experiment is one in which _____.

A) there are at least two groups, one differing from the other by two or more variables

B) the experiment is repeated many times to ensure that the results are accurate

C) the experiment proceeds at a slow pace to guarantee that the scientist can carefully observe all reactions and process all experimental data

D) there are at least two groups, one of which does not receive the experimental treatment

Answer: D

Module: 1.4

Skill: Applying/Analyzing

Learning Outcome: 1.3, 1.4

Global Learning: G1, G5

38) What does it mean when we say, "This scientific study was published in a peer-reviewed journal"?

A) This study can now be viewed on the Internet.

B) This study was published in a newspaper.

C) This study was evaluated by qualified and impartial experts before being published.

D) This study was not evaluated by other scientists.

Answer: C

Module: 1.5

Skill: Applying/Analyzing

Learning Outcome: 1.3

Global Learning: G1, G5

39) What is the difference between a primary and a secondary source?

- A) A primary source is the original material published by the scientists, whereas a secondary source is a description of the original material.
- B) A primary source is the raw data before scientists publish, whereas a secondary source is a description of the original material.
- C) A primary source is the original material published by the scientists, whereas a secondary source is the raw data before scientists publish.
- D) There is no difference between primary and secondary sources.

Answer: A

Module: 1.5

Skill: Applying/Analyzing

Learning Outcome: 1.3

Global Learning: G1, G5

Use the following table to answer the following question(s).

Table 1: Cookie parameters with varying fat levels

Dough fat level (%)	Cookie weight (g)	Cookie diameter (mm)	Cookie height (mm)	Cookie moisture (%)
15.8	23.5	90.1	7.1	2.7
13.1	22.8	86.8	8.2	2.1
10.2	24.6	82.8	8.9	3.5
8.7	25.2	79.6	9.9	3.9

Data from Pareyt, Bram, Faisal Talhaoui, Greet Kerckhofs, Kristof Brijs, Hans Goesaert, Martine Wevers, and Jan A. Delcour, "The Role of Sugar and Fat in Sugar-Snap Cookies: Structural and Textural Properties." *Journal of Food Engineering* 90, 3 (Feb. 1, 2009): 400-408.

40) Based on the table above, which type of cookie was the heaviest?

- A) Cookies with the most fat
- B) Cookies with intermediate amount of fat
- C) Cookies with the least fat
- D) The amount of fat did not affect the weight of cookies

Answer: A

Module: 1.6

Skill: Applying/Analyzing

Learning Outcome: 1.4

Global Learning: G3, G4

41) Based on the table above, which cookies were the moistest?

- A) Cookies with the most fat
- B) Cookies with intermediate amount of fat
- C) Cookies with the least fat
- D) All cookies had the same moisture

Answer: C

Module: 1.6

Skill: Applying/Analyzing

Learning Outcome: 1.4

Global Learning: G3, G4

42) Based on the table above, which of the following statements is *not* correct?

- A) Cookies with the most fat were the cookies that were not only the flattest but also the largest in diameter.
- B) Cookies with the most fat were the cookies that were not only the flattest but also the driest.
- C) Cookies with the most fat were the cookies that were not only the thickest but also the largest in diameter.
- D) Cookies with the least fat were not only the heaviest but also the thickest cookies.

Answer: C

Module: 1.6

Skill: Evaluating/Creating

Learning Outcome: 1.4

Global Learning: G3, G4

43) Based on the table above, which of the following statements is correct?

- A) The amount of fat and sugar in cookies affects not only the cookies' weight and size but also their moisture.
- B) The amount of fat, but not of sugar, in cookies affects not only the cookies' weight and size but also their moisture.
- C) The amount of sugar, but not of fat, in cookies affects not only the cookies' weight and size but also their moisture.
- D) Fat and sugar do not affect the cookies' weight, size, and moisture.

Answer: B

Module: 1.6

Skill: Evaluating/Creating

Learning Outcome: 1.4

Global Learning: G3, G4

44) To obtain large, flat cookies, one should use more fat in a recipe.

Answer: TRUE

Module: 1.6

Skill: Evaluating/Creating

Learning Outcome: 1.4

Global Learning: G3, G4

Use the following graph to answer the following question(s).

45) Regardless of the amount of fat contained in cookies, the most common cell size in a cookie was _____.

- A) very large (larger than 1,500 μm)
- B) very small (smaller than 100 μm)

- C) between 280 and 500 μm
- D) between 1,000 and 15,000 μm

Answer: C

Module: 1.6

Skill: Evaluating/Creating

Learning Outcome: 1.4

Global Learning: G3, G4

46) What type of graph is this?

- A) A bar graph
- B) A pie chart
- C) A scatter plot
- D) A table

Answer: C

Module: 1.6

Skill: Remembering/Understanding

Learning Outcome: 1.4

47) The cookies with the least amount of fat had more cells around 500 μm in size than did the cookies with the most amount of fat.

Answer: TRUE

Module: 1.6

Skill: Applying/Analyzing

Learning Outcome: 1.4

48) The amount of fat does not affect the frequency of the size of cells found in cookies.

Answer: FALSE

Module: 1.6

Skill: Applying/Analyzing

Learning Outcome: 1.4

49) What is the unifying or "core" theme of biology?

A) Evolution

B) Energy transfer

C) Nutrient recycling

D) Hierarchical organization

Answer: A

Module: 1.7

Skill: Remembering/Understanding

Learning Outcome: 1.4

50) Name at least three organs that are part of your digestive system. Explain why the organs you chose are in fact organs and not something else. Describe their role in the digestive system.

Answer: Stomach (chemical digestion), small intestine (nutrient absorption), large intestine (water reabsorption), liver (bile production), gallbladder (bile storage), pancreas (digestive enzyme production). These organs all consist of multiple tissue types that cooperate to perform a specific task.

Module: 1.2

Skill: Evaluating/Creating

Learning Outcome: 1.1

Global Learning: G7

51) The scientific method has limitations. It can only answer objective questions based on quantitative facts from observable, measurable, and repeatable experiments. It cannot answer subjective questions based on qualitative beliefs or opinions such as the presence of deities and ghosts or who makes the best doughnut. Could the scientific method theoretically be used to answer the question, "Does throwing a virgin into a volcano prevent it from erupting?" Support your answer.

Answer: While unethical, after defining a few terms, a controlled experiment could be designed to test this hypothesis. It may require multiple virgins and/or multiple volcanoes, but it would be possible to discover whether a correlation exists.

Module: 1.3

Skill: Evaluating/Creating

Learning Outcome: 1.3

Global Learning: G1, G2
