| Chapter 1 - Busine                           | ss Now: Change       | Is the Only Constant   |   |
| 1. A core goal for su                        | ccessful businesses  | s is to deliver value to customers wh                                      | nile generating long-term profits.                          |
|  | a.                   | True   | 888   |
|  | b.                   | False  |   |
| ANSWER:                                      |                      |  | True  |
| 2. One personality tr                        | rait shared by most  | entrepreneurs is the desire to avoid                                       | risk.   |
|  | a.                   | True   |   |
|  | b.                   | False  |   |
| ANSWER:                                      |                      |  | False   |
| 3. A firm will experi                        | ence a loss when it  | s revenue is less than its expenses.                                       |   |
|  | a.                   | True   |   |
|  | b.                   | False  |   |
| ANSWER:                                      |                      |  | True  |
| 4. Producers today d                         | eliver better goods  | more quickly and cheaply than eve  | r before.   |
|  | a.                   | True   |   |
|  | b.                   | False  |   |
| ANSWER:                                      |                      |  | True  |
| 5. "Quality of life" is goods and services p |                      |  | usively on the quantity and quality of                      |
|  | a.                   | True   |   |
|  | b.                   | False  |   |
| ANSWER:                                      |                      |  | False   |
| 6. The standard of li                        | ving reflects the qu | ality and quantity of goods availabl                                       | e to a nation's population.                                 |
|  | a.                   | True   |   |
|  | b.                   | False  |   |
| ANSWER:                                      |                      |  | True  |
| *  | r efforts yield bene | heir time, money, and other resource fits to many others in society, in ad | <b>C</b> 1  |
|  | a.<br>1.             | True   |   |
| ANSWER:                                      | b.                   | False  | True  |
|  | of all wat f         | 4  |   |
| 8. One characteristic                        | -                    | t organizations is that they do not e<br>True                              | arn any revenue.  |
|  | a.<br>b.             | False  |   |

| ANSWER:                  |                    |                                    | True                                  |
| 35. The four factors of  | f production are r | natural resources, capital, mone   | y, and entrepreneurship.              |
|                          | a.                 | True                               |                                       |
|                          | b.                 | False                              |                                       |
| ANSWER:                  |                    |                                    | False                                 |
| 36. The four factors of  | f production are r | atural resources, capital, huma    | n resources, and entrepreneurship.    |
|                          | a.                 | True                               |                                       |
|                          | b.                 | False                              |                                       |
| ANSWER:                  |                    |                                    | True                                  |
| 37. Natural resources    | are created by pe  | ople as a factor of production a   | nd include agricultural products.     |
|                          | a.                 | True                               |                                       |
|                          | b.                 | False                              |                                       |
| ANSWER:                  |                    |                                    | False                                 |
| 38. Capital, as a factor | of production, in  | ncludes machines, tools, buildin   | ngs, information, and technology.     |
|                          | a.                 | True                               |                                       |
|                          | b.                 | False                              |                                       |
| ANSWER:                  |                    |                                    | True                                  |
| 39. Companies use cap    | pital to produce g | oods and services.                 |                                       |
|                          | a.                 | True                               |                                       |
|                          | b.                 | False                              |                                       |
| ANSWER:                  |                    |                                    | True                                  |
| 40. Human resources i    | include the physic | cal, intellectual, and creative co | ontributions of people in an economy. |
|                          | a.                 | True                               |                                       |
|                          | b.                 | False                              |                                       |
| ANSWER:                  |                    |                                    | True                                  |
| 41. Entrepreneurs are    | individuals willin | ng to take the risk of owning an   | d operating a business.               |
|                          | a.                 | True                               |                                       |
|                          | b.                 | False                              |                                       |

| Name<br>:                         |                        | Class<br>::  | Dat<br>e:  |
|-----------------------------------|------------------------|--|--|
| Chapter 1 - Busine                | ess Now: Change        | Is the Only Constant   |  |
| ANSWER:                           |                        |  | True   |
| 42. In the context of operations. | factors of producti    | on, the term capital means the                                   | money businesses use to finance their                |
|                                   | a.                     | True   |  |
|                                   | b.                     | False  |  |
| ANSWER:                           |                        |  | False  |
| 43. People can creat              | e natural resources    | by growing and harvesting agr                                    | ricultural products.                                 |
|                                   | a.                     | True   |  |
|                                   | b.                     | False  |  |
| ANSWER:                           |                        |  | False  |
| 44. The value of all              | natural resources te   | ends to rise with high supply.                                   |  |
|                                   | a.                     | True   |  |
|                                   | b.                     | False  |  |
| ANSWER:                           |                        |  | False  |
| 45. Entrepreneurship              | o is the resource that | at appears to be the most impor                                  | tant determinant of economic growth.                 |
|                                   | a.                     | True   |  |
|                                   | b.                     | False  |  |
| ANSWER:                           |                        |  | True   |
|                                   |                        | 's lawn while he was in school f his friends. Scott is an entrep | . After returning from college, he started a reneur. |
|                                   | a.                     | True   |  |
|                                   | b.                     | False  |  |
| ANSWER:                           |                        |  | True   |
| 47. Factors of produ              | ction are the resour   | ces a business needs to achieve                                  | e its objectives.                                    |
|                                   | a.                     | True   |  |
|                                   | b.                     | False  |  |
| ANSWER:                           |                        |  | True   |
| 48. Apple provides a              | an excellent examp     | le of being on the leading edge                                  |  |
|                                   | a.                     | True   |  |
|                                   | b.                     | False  |  |
| ANSWER:                           |                        |  | True   |
| 49. Recent research               | suggests that invest   | ting in worker satisfaction yield                                | ds tangible bottom-line results.                     |
|                                   | a.                     | True   |  |
|                                   | b.                     | False  |  |
| ANSWER:                           |                        |  | True   |

| Name<br>:                                    |                       | Class<br>:                       | Dat<br>e:                                |

135. Lisa is a marketing consultant who is trying to help a regional company design an advertising campaign that will appeal to the local population. Her report should take into account things such as the age, income, and ethnic composition of the area's population. What term best describes this?

- a. sociological warfare
- b. demographics
- c. natural resource management
- d. psychographics

ANSWER: b

136. Which of the following business environments do entrepreneurs participate in?

- a. capital, economic, and competitive environments
- b. competitive, economic, and social environments
- c. economic, competitive, technological, social, and global environments
- d. human resources, competitive, and social environments

ANSWER:

137. Tiny Timbers Tree Farm sells a variety of trees for different customers. Recently, the company received notice from the Ministry of Natural Resources that a shortage of fir trees is affecting a rare moth population. The government has ruled that tree farms must refrain from cultivating fir trees for business use until further notice. Which element of Tiny Timbers' environment is most directly affected by this ruling?

- a. the economic environment
- b. the global environment
- c. the social environment

citizens consume affect their well-being, the standard of living clearly affects the quality of life. But the quality of life also includes factors not directly measured by gross national income, such as political freedoms, the distribution (rather than simply the average amount) of income, environmental quality, and leisure time.

143. What is a business and how does it survive and maintain a profit?

ANSWER:

A business is an organization that provides goods and/or services in an effort to earn a profit. In order to survive and maintain a profit, a business must efficiently produce goods and services that satisfy the needs of customers. Thus, the firm must be aware of changes in consumer attitudes and preferences that represent new opportunities. It must also be aware of new and innovative ways to lower costs and/or improve quality.

144. How do successful entrepreneurs drive up the standard of living for people worldwide, and contribute to a higher quality of life?

ANSWER:

Not only do businesses provide the products and services that people enjoy, but they also provide the jobs that people need. Beyond the obvious, business contributes to society through innovation—think cars, TVs, and personal computers. Business also helps raise the standard of living through taxes, which the government spends on projects that range from streetlights to environmental cleanup. And socially responsible firms contribute even more, actively advocating for the well-being of the society that feeds their success.

145. Compare and contrast the relationship era and the marketing era.

ANSWER:

Relationship era: Building on the marketing concept, leading-edge firms of today look beyond each immediate transaction with a customer and aim to build long-term relationships. Satisfied customers can become advocates for a business, spreading the word with more speed and credibility than even the best promotional campaign. And cultivating current customers is more profitable than constantly seeking new ones. The key tool is technology. Using the Web and other digital resources, businesses gather detailed information about their customers and use this data to serve them better.

Marketing era: After World War II, the balance of power shifted away from producers and toward consumers, flooding the market with enticing choices. To differentiate themselves from their competitors, business began to develop brands, or distinctive identities, to help consumers understand the differences among various products. The marketing concept emerged: a consumer focus that permeates successful companies in every department, at every level. This approach continues to influence business decisions today as global competition heats up to unprecedented levels.

Note: The student should be able to show the sequence of the eras, as well as provide examples to support the comparisons and contrasts.

146. Compare and contrast the relationship era and the entrepreneurship era.

ANSWER:

Relationship era: Building on the marketing concept, leading-edge firms of today look beyond each immediate transaction with a customer and aim to build long-term relationships. Satisfied customers can become advocates for a business, spreading the word with more speed and credibility than even the best promotional campaign. And cultivating current customers is more profitable than constantly

seeking new ones. The key tool is technology. Using the Web and other digital resources, businesses gather detailed information about their customers and use this data to serve them better.

Entrepreneurship era: Building on the foundation of the industrial revolution, large-scale entrepreneurs emerged in the second half of the 1800s, building business empires. These industrial titans created enormous wealth, raising the overall standard of living across the country. But many also dominated their markets, forcing out competitors, manipulating prices, exploiting workers, and decimating the environment. Toward the end of the 1800s, governments stepped into the business realm, passing laws to regulate business and protect consumers and workers, creating more balance in the economy.

Note: The student should be able to show the sequence of the eras, as well as provide examples to support the comparisons and contrasts.

147. Discuss how not-for-profit organizations become economic magnets for many communities, drawing additional investment. Provide two specific examples.

ANSWER: Non-profit organizations such as museums, schools, theatres, and orchestras have become economic magnets for many communities, drawing additional investment.

148. Explain the differences between a for-profit organization and a not-for-profit organization.

ANSWER: All businesses are regulated by the government and must comply with established standards. Like their profit-driven counterparts, not-for-profit organizations also offer products and services, collect revenues, and employ workers. For-profit organizations are profit driven and have the opportunity to offer their consumer products and services for a fee. Not-for-profit organizations' primary goal is to improve the quality of life for society. They also partner with their communities by providing services to those who are not financially capable to purchase their products or services.

149. List and describe the four factors of production required for an economic system to thrive and create wealth. Provide an example of each in your answer.

ANSWER: Natural resources include inputs that offer value in their natural state, such as land, fresh water, wind, and mineral deposits. Most natural resources must be extracted, purified, or harnessed. Some examples students might use: timber, crude oil, streams, rivers, oceans, minerals.

Capital includes machines, tools, buildings, information, and technology—synthetic resources a business needs to produce goods or services. Some examples students might use: computers, satellites, offices, tractors, earth movers.

Human resources use the physical, intellectual, and creative inputs of those working within an economy. Some examples students might use: college graduates for service companies, teachers, student employees, truck drivers, farmers, law enforcement officers.

Entrepreneurs hip supports the people who assume the risk to own and operate a business. Entrepreneurs are motivated primarily by profit and use their own resources to capitalize on potential not recognized by others. Entrepreneurs must be given the economic freedom to produce. Economic freedom includes freedom of choice, freedom from excess regulation, and freedom from too much taxation. Some examples students might use: Michael Dell, Bill Gates, Jeff Bezos, Sam

| Name | Class | Dat |

|      | ·     | Φ.  |
| •    | •     | Ե.  |

Walton.

150. There are four factors of production required for an economic system to thrive and create wealth. Entrepreneurship is one of them. Explain and provide examples of how an entrepreneur would employ the other factors of production in an effort to grow and maintain a business.

ANSWER: Entrepreneurs are people who are willing to take the risk of owning and operating a business and are largely motivated by the profit incentive. Entrepreneurs work to build economic value by creating opportunities and harnessing the other factors of production.

Entrepreneurs may require natural resources such as land in order to locate the business in the community.

In the use of capital, the entrepreneur might use computers and other technologies to manage the internal operation, and/or grow his or her business online. Other tools and equipment might be used with land to build office space needed to run the business. Students should NOT mention the use of money, as money is used to acquire capital resources.

Human resources encompass the physical, intellectual, and creative contributions of everyone working within an economy. In hiring employees, entrepreneurs employ people to meet customer demands. Employees would be hired at all levels of the organization, and those creative talents and intellectual levels would help the business grow.

151. List and describe the five key dimensions of the broader business environment.

ANSWER: Economic environment: The Canadian economy is strong, largely because the Canadian government supports free enterprise and fair competition with some regulation.

Competitive environment: As global competition intensifies, leading-edge companies have focused on long-term customer satisfaction as never before.

Technological environment: The recent technology boom has transformed business, establishing new industries and burying others.

Social environment: The Canadian population continues to diversify. Consumers are gaining power, and society has higher standards for business behaviour.

Global environment: The Canadian economy works within the context of the global environment. A key factor: rapid economic growth in China and India.

152. List the five key dimensions of the broader business environment and describe the impact each has on the ability of individuals to find employment or start a business.

ANSWER: Student answers will vary greatly. Five key dimensions:

Economic environment offers free enterprise and fair competition, affording some students the ability to start businesses. Fair competition would also afford students multiple job opportunities with the completion of a college degree.

| Name | Class | Dat |
|------|-------|-----|
|      |       | ۵.  |
|      |       | ┖.  |

Competitive environment creates the long-term relationship with customers, suppliers, and vendors. This allows students to see multiple opportunities due to consumer choice options. The more customers want and businesses provide, the more businesses offer jobs to those willing to work. The more competitors within an industry the more competition there is to find skilled workers; therefore companies will pay more to find skilled workers.

Technological environment permits students to work with what they know. With the use of business technology, students can learn the value of hard work in achieving efficiency and effectiveness. "Work with something you are passionate about." The Internet has created more networking online and built businesses along the way.

Social environment takes into account the values, attitudes, customs, and beliefs shared by groups of people. Students come to the job market with their own values and attitudes about work. Students should also mention issues of workforce advantage, aging population, rising worker expectation, and ethics and social responsibility.

Global environment offers students the international job market in which to compete, understanding though that values and attitudes are different among countries. The trade agreements first negotiated under the various rounds of the General Agreement on Tariffs and Trade (GATT) and now continued through the World Trade Organization (WTO) reduce some of the barriers of entry for small businesses as well as industry and the prospective labour pool.

153. Challenges in managing human resources have evolved due to changing demographics affecting the workforce. Describe how demographic changes such as diversity, the aging population, worker expectations, ethics, and social responsibility affect the management of human resources.

ANSWER: Canada has become more ethnically diverse in recent years, and growing ethnic populations offer robust profit potential for firms that pursue them. Growing diversity also impacts the workforce. A diverse staff—one that reflects an increasingly diverse marketplace—can yield a powerful competitive advantage in terms of both innovation and ability to reach a broad customer base.

Effectively managing diversity should only become easier as time goes by. Multiple studies demonstrate that young Canadian adults are the most tolerant age group, and they are moving in a more tolerant direction than earlier generations regarding racial differences, immigrants, and homosexuality. As this generation gathers influence and experience in the workforce, they are likely to leverage diversity in their organizations to hone their edge in a fiercely competitive marketplace.

The rapidly aging population brings opportunities and threats for business. Companies in fields that cater to the elderly—such as healthcare, pharmaceuticals, travel, recreation, and financial management—will clearly boom. But creative companies in other fields will capitalize on the trend as well by re-imagining their current products to serve older clients.

As young people today enter the workforce, they bring higher expectations for their employers in terms of salary, job responsibility, and flexibility—and less willingness to pay dues by working extra long hours or doing a high volume of "grunt work." Smart firms are responding to the change in worker expectations by forging a new partnership with their employees. The goal is a greater level of mutual respect through open communication, information sharing, and training.

| Name | Class | Dat |
|------|-------|-----|
|      |       | ٥.  |
|      |       | Ե.  |

Due to ethical lapses in some behemoth organizations, a growing number of consumers and workers have begun to insist that companies play a proactive role in making their communities—and often the world community—better places. Some corporations even post their ethical codes of conduct and offer social audits to meet this new consumer expectation.

154. In today's business environment employers put less value on routine abilities. List three employee abilities employers place high value upon. Provide a brief explanation of each.

ANSWER: Student answers will vary greatly. Answers, however, should include abilities that cannot be digitized: ability to communicate, creativity, caring, good listening skills, being a team player, and empathy.
