Exam Name_ MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question. 1) The first minerals to be mined (over 6000 years ago) were _____ and _ 1) A) lead; quartz B) gold; silver C) copper; bronze D) flint; chert Answer: D 2) Which of the following is not a criterion for defining something as a mineral? A) naturally occurring B) generally inorganic C) orderly crystalline structure D) hard Answer: D 3) Which of the following is a mineral as defined by a geologist? A) concrete B) salt C) sugar D) boulder E) water Answer: B 4) 4) Why are boulders not a mineral? A) They are organic. B) They are not naturally occurring. C) They are not solid. D) They do not have an orderly crystalline structure. E) They do not have a well-defined chemical composition. Answer: E 5) Limestone is composed almost entirely of calcite, which has the chemical formula CaCO3. As a 5) result, limestone is classified as _____. A) a rock B) a mineral C) both a mineral and a rock D) neither a mineral nor a rock because it is organic Answer: A 6) 6) Which of the following best defines a mineral and a rock? A) A rock consists of atoms bonded in a regular, geometrically predictable arrangement; a mineral is a consolidated aggregate of different rock particles. B) A rock has an orderly, repetitive, geometrical, internal arrangement of minerals; a mineral is a lithified or consolidated aggregate of rocks. C) A mineral consists of its constituent atoms arranged in a geometrically repetitive structure; in a rock, the atoms are randomly bonded without any geometric pattern. D) In a mineral the constituent atoms are bonded in a regular, repetitive, internal structure; a rock is a lithified or consolidated aggregate of different mineral grains. Answer: D

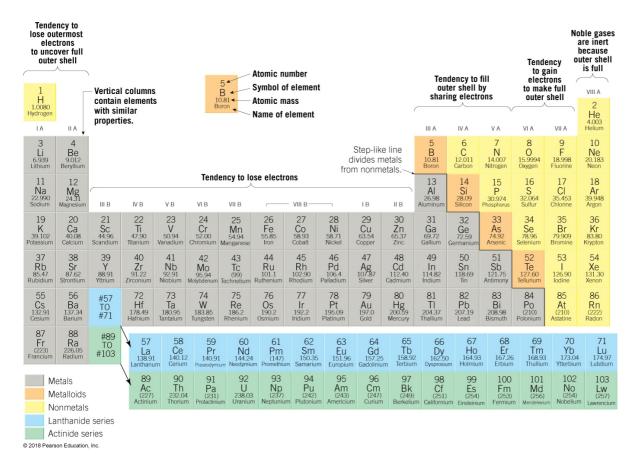

B) They can be a liquidC) They have a specific	ied by characteristic phy	ysical properties. ructure.		7)
8) The basic building blocks A) Na; Cl Answer: A	s for halite are B) Ca; K	and C) Al; O	D) C; Si	8)
9) Which of the following is A) electron Answer: D	s <u>not</u> a fundamental part B) neutron	cicle found in atoms? C) protons	D) selectron	9)
10) Atoms of the same eleme A) protons in the nucle C) electrons in the vale Answer: A	eus	ve the same number of B) neutrons in the o D) electrons in the r	uter nuclear shell	10)
11) Which the following denA) protonsAnswer: A	otes the positively charç B) electrons	ged particles in an atom's i C) neutrons	nucleus? D) isotrons	11)
12) An atom's mass number A) 13 Answer: C	is 13 and its atomic num B) 6	nber is 6. How many neutr C) 7	ons are in its nucleus? D) 19	12)
B) during collapse of a C) by humans in nucle	elled to the solar system star and subsequent nu	via the solar wind uclear synthesis in a super	nova	13)
14) Which of the following m A) quartz (SiO ₂) Answer: B	ninerals is <u>not</u> a chemica B) graphite (C)	Il compound? C) pyrite (FeS)	D) halite (NaCl)	14)
15) When Calcium (Ca) bonc in this compound? A) -2 Answer: C	Is with oxygen, it gives	up two electrons. What is C) +2	the charge of the Ca ion D) +1	15)

16) Which electrons are responsible for most chemical bonding?

- 16)
- A) innermost electron shell because the electrons can be transferred to the nucleus
- B) middle electron shell because they are intermediate in distance between the nucleus and the adjacent atom that bonds with the atom
- C) outer electron shell because these electrons can be readily exchanged with adjacent atoms
- D) Any electron can exchange with adjacent atoms to form a bond; there is no preference.

Answer: C

Use the Periodic table below to answer the following questions:

- 17) Element 20, Ca, has what chemical property?
 - A) It tends to form covalent bonds and an ion with a charge of +1.
 - B) It behaves as a nonmetal, accepting electrons to form an ion with charge -2.
 - C) It tends to be inert, and thus is dispersed throughout the crust.
 - D) It behaves as a metal ion, giving up two electrons to form a +2 ion.

Answer: D

18) Element 17 (CI) and 9 (F) _____

18)

17)

- A) behave as metals because they lie on the right side of the periodic table
- B) are chemically similar because they lie directly below each other on the periodic table
- C) are chemically relatively inert because they adjacent to the inert gases on the periodic table
- D) are chemically very different because they lie directly below each other on the periodic table

Answer: B

19)	Be is to Mg as	->	->		19)
	A) K is to Mg	B) K is to Rb	C) Ti is to F	D) Ti is to V	
	Answer: B				
20)	In 1960 the largest gold pro-	ducer was South Africa. N	low it is		20)
Í	A) Russia	B) China	C) India	D) Brazil	, <u> </u>
	Answer: B				
21)	Changing the number of ne				21)
	A) charge	B) atomic number	C) atomic weight	D) All of the above	
	Answer: C				
22)	The columns of the periodic	table divide atoms by the	eir		22)
	A) number of valence eleC) atomic mass	ctrons	B) number of neutronsD) number of protons		
	Answer: A				
23)	Atoms that share electrons	have a(n) bond.			23)
Í	A) metallic	B) covalent	C) ionic	D) partial	, <u> </u>
	Answer: B				
24)	When electrons are shared a	amongst all atoms, the res	ulting bond is a(n)	bond.	24)
	A) covalent	B) ionic	C) metallic	D) partial	
	Answer: C				
25)	The bond between sodium	(Na) and Chlorine (CI) to 1	form halite (salt) is a(n)	bond.	25)
	A) covalent	B) valent	C) ionic	D) metallic	
	Answer: C				
26)	The bond between two hyd	rogen atoms (a covalent b	ond) is based on the force	of attraction	26)
	between		D) two ions		
	A) two nucleiC) two atoms		B) two ionsD) protons and electrons	in the same atom	
	Answer: D		b) protons and electrons	in the same atom	
271	Atoms that have an electric	al charge due to a gain or	loss of electrons are called		27)
_,,	A) isotopes	ar orial go ado to a gain or	B) ions	·	
	C) periodic elements		D) isochrons		
	Answer: B				
28)	Atoms tend to gain, lose, or	share electrons until they	are surrounded by	valence	28)
	electrons.				
	A) 8	B) 2	C) 5	D) 4	
	Answer: A				
29)	What mineral is the hardest				29)
	A) muscovite	B) silicate	C) native gold	D) diamond	
	Answer: D				

30))) Which mineral reacts readily with cool, dilute hydrochloric acid to produce visible bubbles of				30)
	carbon dioxide gas? A) calcite	B) gypsum	C) quartz	D) plagioclase	
	Answer: A				
31)	The resistance of a mineral A) luster	to abrasion is known as B) hardness	 C) streak	D) cleavage	31)
	Answer: B	ŕ	·	,	
32)	The strong tendency of cert	ain minerals to break ald	ong smooth, parallel planes	is known as	32)
	A) cleavage	B) habit	C) cracking luster	D) streak	
	Answer: A				
33)	The most unreliable (variate	ole) diagnostic property	of minerals such as quartz i	S	33)
	A) habit	B) color	C) specific gravity	D) hardness	
	Answer: B				
34)	1 gram is defined as the ma				34)
	2.65 g and a cubic centimeter lowest is	er of galena weighs 7.5 g	g. The density of these mate	rials from highest to	
	A) galena, quartz, water		B) water, quartz, galena		
	C) galena, water, quartz		D) quartz, galena, water	-	
	Answer: A				
35)	What does the tendency of A) The structure is chara sheets.	-	eavage flakes suggest abou rm an interlocking network	_	35)
		is characterized by comp	olex polymerized mats that	form a sheetlike	
	C) The structure is produstructure.	uced by flow in the igned	ous rock, aligning glass laye	ers within the crystal	
	D) The atoms are arrange by weak bonds between		nts that form strongly bond	led sheets separated	
	Answer: D				
36)	Angles are important when A) cleavage	n looking at which physi B) fracture	cal properties of minerals? C) luster	D) streak	36)
	Answer: A	•	•	•	
37)	Which of the following phy	/sical properties is not ge	enerally used to identify mo	ost minerals?	37)
	A) cleavage	B) smell	C) hardness	D) luster	
	Answer: B				

38) Geologists may choose to lic	k a minerai to identii	ry it. what mineral is the	geologist expecting with	38)
this test?				
A) NaCl (halite) or KCl (s	•			
B) a sulfide bearing rock				
C) None, it clears the dus	•		_	
D) None, they are clearing	g the hydrochloric ac	id from the sample to rer	un a test for calcite.	
Answer: A				
39) Which of the following desc	ribes the light reflect	ing and transmission cha	racteristics of a mineral?	39)
A) luster		B) fluorescence		
C) color streak		D) virtual absorption	on	
Answer: A		,		
40) When a mineral fractures al of the mineral?	ong a cleavage plane,	, what does this suggest a	ibout the crystal structure	40)
A) The crystal grows only	, planar faces that bed	come weak zones that for	m cleavage.	
B) The crystal contains w	arped planes called t	win planes that weaken t	he crystal structure and	
allow it fracture along	a planar surface, cau	ising cleavage.		
C) The atoms are arrange	d in a simple orderly	arrangement with unifor	rm bonding.	
D) The crystal structure c	ontains planes along	which chemical bonding	is much weaker than	
other directions.				
Answer: D				
41) Why do the minerals calcite	and dolomite bubble	e with the mineral or its p	owder are placed in	41)
hydrochloric acid?		·	·	
A) Both minerals are met	al hydrides, and whe	n placed in hydrochloric	acid they give off	
hydrogen gas.				
B) Both minerals are sulf	des, and the acid read	cts to release sulfur dioxi	de gas.	
C) The acid reacts with the control of the contr	ie mineral to release (CO ₂ gas that is bound int	o the crystal as carbonate	
ion.				
D) The acid and the mine	ral together react wit	h oxygen in the air, releas	sing CO2 gas.	
Answer: C				
42) The mineral fluorite is comr	nonly			42)
	B) octohedral	C) sheetlike	D) cubical	
Answer: B	D) cotonicara.	3 , 3,1331,1113	D) oddiodi	
43) Quartz has a characteristic of			uartz as elongate six	43)
sided objects with a pointed		•	ly artificial arrestale group	
A) You should never buy this way.	a crystal like this bed	cause it is clearry rake, on	ry artificial crystals grow	
B) Quartz usually is amo	rphous, consistent wi	th its conchoidal fracture	but when it arows it	
grows against mineral			,	
C) The rock shop cuts the	•		to give the crystals more	
"power" for the crystal	_		J J	
D) The planar faces that f		stal faces that grow whe	n the crystals grew into a	
void.	,		5 0	
Answer: D				

44) A cubic centimeter of	f quartz, olivine, and gold weig	ghs 2.5, 3.0, and 19.8 gra	ams, respectively. This	44)
B) olivine and quaction C) gold and olivir	ner specific gravity than quartz artz powders are harder than m ne are silicates, whereas quartz mes harder than olivine and qu	netallic gold is elemental silicon		
45) Which mineral will 'A) flourite	'double refract" written text? B) apatite	C) quartz	D) calcite	45)
Answer: D				
46) Your fingernail will A) talc	scratch B) orthoclase	C) calcite	D) corundum	46)
Answer: D				
	vely common, limestone is an edineral,, is used in the p	.	5 .	47)
A) calcite; cement			D) calcite; calcium	
Answer: A				
48) Which of the followi living things.	ng is <u>not</u> a common rock formi	ng mineral but by cont	rast is always found in	48)
A) iron	B) potassium	C) magnesium	D) carbon	
Answer: D				
49) Which two elements A) silicon and oxy B) silicon and nitr C) carbon and nitr D) nitrogen and oxy	ogen rogen xygen	ommon rock forming r	minerals in the crust?	49)
Answer: A				
50) The most common g A) the halides	roup of rock forming minerals B) the silicates	is C) the sulfates	D) carbonate	50)
Answer: B	,	,	,	
51) The most common g A) granite	roup of silicates is B) mica	C) quartz	D) feldspar	51)
Answer: D	,	, I	, '	
	lock of a silicate is composed of		-00	52)
A) 1 oxygen and 1 C) 2 oxygens and Answer: D		B) 3 oxygens and 1 D) 4 oxygens and 1		

53) Silicates most commonly form		53)
A) at the surface of EarthC) from other silicates	B) under extreme pressureD) from cooling molten rock	
Answer: D	,	
54) Clay is an example of		54)
 A) a sulfate that forms from weathering of other s B) a carbonate that forms from weathering of other C) a silicate that forms from weathering of other s D) a halide that forms from weathering of other h 	er carbonates silicates	
Answer: C		
 55) Light colored silicates have a specific gravity of about silicate tetrahedra and A) iron, magnesium, calcium, and sodium B) potassium, calcium, sodium, and aluminum C) aluminum, magnesium, calcium, and iron 	ut 2.7 grams/cm ³ are composed primarily of the	55)
D) potassium, aluminum, magnesium, and sodium E) magnesium, aluminum, sodium, and calcium	m	
Answer: B		
56) Clay minerals are light silicates that form		56)
 A) from chemical weathering of igneous rocks B) from mechanical weathering of any rock C) from pressure and heat D) from molten rock 		
Answer: A		
57) Dark silicates have a specific gravity of 3.2 to 3.6 and	d are composed primarily of silica tetrahedral	57)
 and A) aluminum and sodium B) iron and magnesium C) aluminum and magnesium D) potassium and iron E) potassium and calcium 		
Answer: B		
58) Carbonates always include		58)
A) SiO4 ⁻⁴	B) SO ₄ ⁻²	
C) CI ⁻¹ , F ⁻¹ , or Br ⁻¹	D) CO ₃ ⁻²	
Answer: D		
59) Halides always include		59)
A) CI ⁻¹ , F ⁻¹ , or Br ⁻¹	B) SO4 ⁻²	
C) CO3 ⁻²	D) SiO_4^{-4}	

Answer: A

60) Sulfates always include	de			60)
A) CI ⁻¹ , F ⁻¹ , or Br	-1	B) SO ₄ ⁻²		
C) CO3 ⁻²		D) SiO4 ⁻⁴		
Answer: B				
61) Gypsum, which is wid	dely used in plaster and wall B) halide	board, is a member of th C) carbonate	ne group. D) sulfate	61)
Answer: D	,	,	•	
A) halide	ium-rich member of the B) carbonate	group. C) sulfate	D) silicate	62)
Answer: B				
63) Which of the followin	=	-	->	63)
A) halite Answer: B	B) feldspar	C) hematite	D) calcite	
64) Which one of the follo	owing mineral groups exhibit	ts a sheet-like silicate st	ructure?	64)
A) carbonates Answer: B	B) micas	C) pyroxenes	D) feldspars	
65) Which common mine	ral is composed entirely of si	licon and oxygen?		65)
A) quartz	B) calcite	C) diamond	D) olivine	
Answer: A				
•	dimensional networks of sili	cates?		66)
A) they form sheets B) they form comp C) they are bonded		ons		
, ,	separate tetrahedral units			
Answer: B				
67) A naturally occurring economically is a(n) _	concentration of one or mor	e metallic minerals that	can be extracted	67)
A) ore	B) reserve	C) tailing	D) resource	
Answer: A				
-	g is a renewable resource?	(C) and	D) made acit	68)
A) water Answer: A	B) helium gas	C) coal	D) rock salt	
69) This element is classifA) uranium	ied as an ore even in average B) carbon	e concentrations because C) aluminum	e it is so abundant. D) boron	69)
Answer: C				

70) What theory dramatically improved geologist's ability to predict where certain ore deposits were formed?			
	B) plate tectonics D) geosynclines		
•	ould never be considered a	n ore due to their	71)
B) galena	C) hematite	D) quartz	
			72)
panies went to old n gs. What is the prim only interested acquanything with the cations make it impose the companies couprices made mineratially be extracted p	nining areas and extracted of eary explanation for this act diring properties through a deposits assuming no one cassible to explore anywhere ald look for deposits. al resources that were preving tofitably.	old mine wastes or ivity? sleazy land grab, and had ared about brown fields. but old mining areas, so ously uneconomic into	
nillions of years a human life span		time as Earth.	73)
	Illowing minerals wee? B) galena st metal prices were ultaneously, the earl panies went to old need in the prime only interested acquanything with the cations make it impose the companies couprices made mineratially be extracted powasteful and left larm to produce most mentallions of years a human life span	B) plate tectonics D) geosynclines Illowing minerals would never be considered and? B) galena C) hematite St metal prices were very low but metal prices altaneously, the early 21st century saw extensive panies went to old mining areas and extracted or gs. What is the primary explanation for this actionly interested acquiring properties through a anything with the deposits assuming no one captions make it impossible to explore anywhere the companies could look for deposits. Prices made mineral resources that were previously be extracted profitably. Wasteful and left large amounts of ore in the graph of the produce most mineral deposits? It is produce most mineral deposits?	B) plate tectonics D) geosynclines Illowing minerals would never be considered an ore due to their e? B) galena C) hematite D) quartz Ist metal prices were very low but metal prices increased dramatically in ultaneously, the early 21st century saw extensive "brown fields banies went to old mining areas and extracted old mine wastes or gs. What is the primary explanation for this activity? Only interested acquiring properties through a sleazy land grab, and had anything with the deposits assuming no one cared about brown fields. Actions make it impossible to explore anywhere but old mining areas, so the the companies could look for deposits. Prices made mineral resources that were previously uneconomic into tially be extracted profitably. Wasteful and left large amounts of ore in the ground.

- A) It is unknown if any copper underlies this deposit, so miners must continue to dig to find it.
- B) Copper is economically valuable even in small quantities, so it is considered to be worth creating a large hole to extract as much as possible.
- C) Copper exists in abundant quantities, so miners are trying to extract as much as possible.
- D) The mine is the only location on Earth where copper is found, so the hole needs to be large.

Answer: B

Answer: D

75) Examine the words and/or phrases below and determine the relationship among the majority of						
words/phrases. Choo	ords/phrases. Choose the option that does not fit the pattern. A) peutron B) atom C) proton D) electron					
A) neutron	B) atom	C) proton	D) electron			
Answer: B						
•	and/or phrases below and de ose the option that does not		among the majority of	76)		
A) valence	B) hydrogen	C) covalent	D) ionic			
Answer: A						
•	and/or phrases below and de ose the option that does not	•	among the majority of	77)		
A) cubic	B) amorphous	C) bladed	D) tabular			
Answer: B						
	and/or phrases below and de	•	among the majority of	78)		
words/phrases. Cho	ose the option that does not t	fit the pattern.				
A) feldspar	B) quartz	C) olivine	D) calcite			

79)	Examine the words and/or p	phrases below and determ	ine the relationship amon	g the majority of	79)
	words/phrases. Choose the	•	•		
	A) feldspar	B) quartz	C) olivine	D) calcite	
	Answer: D				
00)	Evenine the words and/or a	abrasas balaur and datarm	ina tha ralationahin aman	a the majority of	00)
80)	Examine the words and/or pwords/phrases. Choose the			g the majority of	80)
	A) carbon	B) aluminum	C) oxygen	D) iron	
	Answer: A	,	, , , ,	,	
81)	Rocks are aggregates of				81)
	A) elements	B) protons	C) compounds	D) minerals	
	Answer: D				
82)	All minerals have at least	element(s)			82)
02)	A) two	B) ten	C) one	D) 4000	
	Answer: C	,	,	·	
83)	Electrons orbit the nucleus				83)
	A) in clouds of probabilitB) briefly and then bond	-			
	,	nets going around the sur	1		
	D) by continually passing	5 5			
	Answer: A				
84)	An atom with 30 protons, 30				84)
	A) 90	B) 30	C) 60	D) 27,000	
	Answer: B				
85)	The mass of an atom does n	ot come from its			85)
	A) nucleus	B) protons	C) electrons	D) neutrons	
	Answer: C				
04)	A	-£'	£		0()
86)	An element's atomic mass is A) neutrons	s defined by the number o	f in the nucleus. B) electrons		86)
	C) protons		D) both protons and neut	rons	
	Answer: D		-,		
	7				
87)	Electrically neutral atoms ha				87)
	A) enormous	B) equal	C) contrasting	D) differing	
	Answer: B				
00/	All atoms of the same eleme	ant have the same number	of		88)
00)	A) neutrons	B) electrons	C) protons	D) minerals	
	Answer: C	,	, I	,	
89)	Atoms are to be se		-		89)
	A) just barely large enough	gh	B) too small		
	C) too large		D) too weak		
	Answer: B				

90) The octet rule states that atoms tend to gain, lose, or share electrons until they are surrounded by				
valence ele	ctrons.	- .		
A) eight		B) three		
C) no		D) as many protons	s as tney nave	
Answer: A				
01) Chamical compound	ls rotain most of the charact	oristics of their constituen	t alamants	91)
A) none	Is retain most of the charact B) few	C) all	D) most	91)
Answer: B	D) ICVV	O) un	<i>D)</i> 11103t	
Allswei. D				
92) Which of the followi	ng is true of cleavage?			92)
	exhibit no cleavage.			
	racture are the same thing.			
	hibit some form of cleavage	e.		
D) Most minerals	have three or more directio	ns of cleavage.		
Answer: A				
	adly classified as either beir	_		93)
A) nonmetallic	B) pearly	C) vitreous	D) opaque	
Answer: A				
04) Mast with souls become				0.4)
	specific gravity th	ian water.		94)
A) a lowerB) the same				
C) a higher				
. •	have specific gravity as it i	s not a mineral		
Answer: C	nave specific gravity as it i	s not a minoral.		
Aliswei. C				
95) The micas, biotite an	d muscovite, both exhibit _	direction(s) of cle	avage.	95)
A) no	B) one	C) two	D) three	
Answer: B	·	,	,	
96) A brown mineral spe	ecimen and a green mineral	specimen have identical I	nardness. This means	96)
·				
A) they may or magingidentification	ay not be the same mineral,	because hardness is only	one indicator of mineral	
B) they are definit	ely the same mineral, due t	o having the same hardne	SS	
	the same mineral, as they a			
-	d not necessarily be useful	here, as only metallic mine	erals have hardness and	
they may be no	nmetallic			
Answer: A				
07) Λ minoral's is produ	ced by its ability to transmi	t light. Onague minerals s	llwave have a	97)
luster because they	5	i fight. Opaque milierais a	iivvays iiave a	71)
A) nonmetallic; tra	9	B) metallic; transm	it	
C) metallic; do no		D) nonmetallic; do		
Answer: D		,		

98)	Cleavage is related to the _	of a mineral.			98)
	A) color		B) internal structure		
	C) fracture		D) streak		
	Answer: B				
99)	Silicon-oxygen bonds are _	and cause cleav	age to be in silic	cate minerals.	99)
	A) strong, uncommon		B) strong, common		
	C) weak, common		D) weak, uncommon		
	Answer: A				
100)	In the silicon-oxygen tetrah			e are in oxygen atoms.	100)
	A) as many	B) many more	C) a few more	D) less	
	Answer: D				
101)	Quartz forms at t	emperature than olivine.			101)
	A) a higher	B) a much higher	C) a lower	D) the same	
	Answer: C				
102)	Diamond and graphite are	both minerals composed	of		102)
	A) silica		B) oxygen		
	C) a compound		D) a single element		
	Answer: D				
103)	Halite and gypsum are	minerals.			103)
	A) metallic		B) opaque		
	C) synthetic		D) industrially useful		
	Answer: D				
104)	Many metals are extracted				104)
	A) carbonate	B) sulfate	C) silicate	D) halide	
	Answer: B				
105)	Quartz can be found in	·			105)
	A) plastic	B) steel	C) glass	D) metal	
	Answer: C				
106)	A compound is a stable che	emical substance compos	ed of two or more		106)
	A) minerals	B) atoms	C) elements	D) protons	
	Answer: C				
107)	What are the smallest parti		t and define the distinctiv	e chemical	107)
	characteristics of the indivi				
	A) protons	B) atoms	C) elements	D) minerals	
	Answer: B				
108)	The atomic particle that car	-			108)
	A) element	B) mineral	C) atom	D) proton	
	Answer: D				

ividity) what physical property denotes the color of a powdered mineral?				109)
A) streak	B) hardness	C) luster	D) cleavage	
Answer: A				
110) The physical property denoting a mineral's tendency to crack along parallel, planar surfaces is known as				110)
A) hardness	B) streak	C) luster	D) cleavage	
Answer: D				
111) Wood floats in water and rocks sink; thus, the density of wood is A) exactly the same as water				111)
B) higher than tha	t of water			
C) lower than that				
D) unable to be co	mpared to water, as they a	re two different sates of i	matter	
Answer: C				

ESSAY. Write your answer in the space provided or on a separate sheet of paper.

112) Talc and graphite are two of the lowest minerals on the hardness scale. They are also described by terms like greasy or soapy. Both have a crystal structure characterized by sheet-structures at the atomic level, yet they don't behave like micas. What accounts for their unusual physical properties?

Answer: The chemical bonds between the sheets is so weak that very low stresses can allow slip between the sheets; hence, the greasy feel and low hardness.

113) There are people who specialize in "cutting" diamonds, yet diamond is the hardest known substance. From your knowledge of minerals, which of the following describes what the diamond cutter does?

Answer: Diamond has more than one cleavage, and the cutter looks for small cracks along the cleavage and uses a chisel to break the mineral along the cleavage.

- 114) Gold is one of the rarest elements in the universe, yet it is extracted from ores on Earth. How is this possible?
 - Answer: Gold does not bond with other elements and the native metal is extremely concentrated in Earth's crust, which allows it to be extracted from rocks but low concentrations still contribute to its low price.
- 115) Joe Geologist discovers a vein made up primarily of quartz but also containing significant amounts of pyrite as well as chalcopyrite. He knows better than to fall for fool's gold, and decides to ignore the vein. Did he make the right decision? Explain.

Answer: No, although the pyrite has no value the chalcopyrite has copper and sulfide minerals in quartz veins are a common association with gold bearing veins. He should have examined this in much more detail.
