CHAPTER 2: The Way the Earth Works: Plate Tectonics

MULTIPLE CHOICE

1. Wegener's evidence for a united Pangaea was so compelling that virtually all geologists agreed with the idea of continental drift during his lifetime.

a. true b. false

ANS: B DIF: Easy REF: 2.1 TOP: I.B

MSC: Applied

2. Without plate tectonics, we would not have

a. plates in constant motion c. formation of new oceans

b. mountain building d. All of the above are correct.

ANS: D DIF: Medium REF: 2.1 TOP: I

MSC: Conceptual

3. Evidence for a united Pangaea comes from the fossil record of which type(s) of organisms?

a. various plant types c. freshwater animals

b. large terrestrial animals d. All of the above are correct.

ANS: D DIF: Medium REF: 2.1 TOP: I.A

MSC: Factual

4. Currently, most geologists

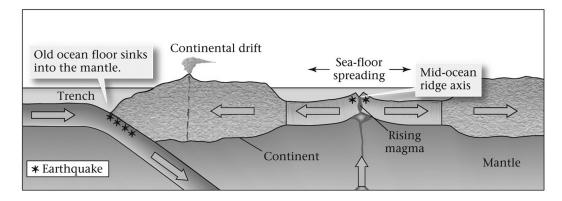

a. continue to reject continental drift

- b. agree that continental drift occurs, but they still do not understand why it occurs
- c. agree that continental drift occurs; the mechanisms that drive drift are at work in the ocean basins and upper mantle and were unknown in Wegener's time
- d. agree that continental drift occurs; the mechanisms that drive drift are at work in the lower mantle and outer core and were unknown in Wegener's time

ANS: C DIF: Medium REF: 2.1 TOP: I.B

MSC: Applied

5. The term and concept of sea-floor spreading (see figure below) was developed by

a. Hess and Dietz

c. Wegener and Dietz

b. Hess and Wegener

d. Wegener

ANS: A

DIF: Medium

REF: 2.1

TOP: I.C

MSC: Factual

6. The theory of plate tectonics is a theory because it

a. was discovered so long ago

c. is not widely accepted

b. is widely accepted

d. is commonly regarded as correct

ANS: D

DIF: Medium

REF: 2.1

TOP: I.D

MSC: Conceptual

7. According to Wegener, puzzle pieces are to a jigsaw puzzle as is/are to Pangaea.

a. continental drift

c. faults

b. continents

d. plate tectonics

ANS: B

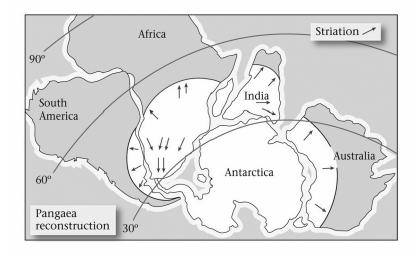

DIF: Easy

REF: 2.2

TOP: II.A

MSC: Factual

8. Late Paleozoic glacial deposits are NOT found in which of the following places?

a. India

c. North America

b. southern Africa

d. South America

ANS: C

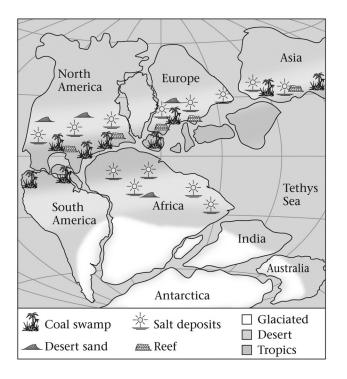

DIF: Easy

REF: 2.2

TOP: II.B

MSC: Factual

9. Consult the figure below. Abundant swamps led to the formation of coal during the Late Paleozoic in which of the following places?

southern Africa d. South America

ANS: C DIF: Easy REF: 2.2 TOP: II.C

MSC: Factual

10. Wegener's idea of continental drift was rejected by American geologists because ______.

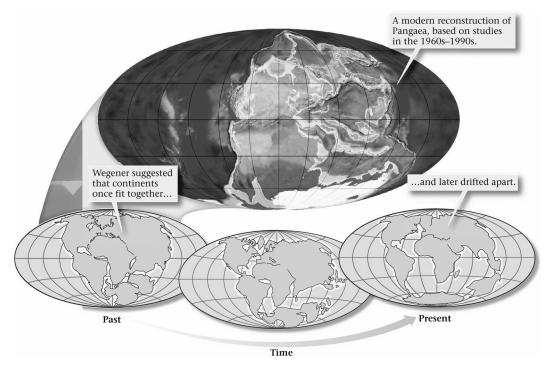

North America

- a. his English was too poor to be understood by them
- b. he could not conceive of a valid mechanism that would cause continents to shift positions
- c. he had relatively little evidence supporting the existence of a supercontinent
- d. the apparent fit of continental coastlines is blurred when the margins are defined by the edges of continental shelves rather than sea level

ANS: B DIF: Medium REF: 2.2 TOP: II

MSC: Applied

11. Wegener proposed continental drift after he observed evidence from fossils, glacial deposits, and the fit of the continents that suggested all of the continents were once ______.

- a. aligned north to south along the prime meridian during the Late Cenozoic
- b. aligned east to west along the equator during the Late Mesozoic through the Cenozoic
- c. combined to form a supercontinent (he termed Rodinia) in the Proterozoic

MSC: Factual

glacial deposits

d. combined to form a supercontinent (he termed *Pangaea*) in the Late Paleozoic through the Mesozoic
