Which of the following statements is *true*?

Ill-conceived goals occur when we set goals and incentives to promote a desired behavior, and that behavior is achieved.

The slippery slope refers to seeing the ethical actions of others as an example to follow.

Motivated blindness occurs when we overlook the unethical behavior of another because it's in our interest to remain ignorant.

If the outcome is good, then the behavior must be ethical.

Direct blindness occurs when we hold others less accountable for unethical behavior because it's carried out through third parties.

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

Discuss the statement, “The contingency approach is just common sense.” Is this true? Why or why not? Why is this important for managers?

Explain the difference between hard and soft skills and why both are important. List what you think are your two strongest soft skills. Also briefly, and specifically, explain how they can or do benefit you at school and work. List what you think are your two strongest hard skills. Explain specifically how they can or do benefit you at work and school.

Soft skills are not job-specific. Rather, they are portable skills, more or less relevant in every job, at every level. They include personal attributes and interpersonal skills. Provide examples of two personal attributes and two interpersonal skills and describe how they help you at school or work.

Assume that you worked for Quality Investments for four years. The owners of the firm—whom you respected—have been charged with insider trading. They deny the charge, but the firm is closing down and you need to find another job. How does the firm’s unethical behavior impact you personally? How can you explain the situation during an interview?

What is self-awareness? Why is self-awareness important in school or in the workplace? How can you develop self-awareness? Provide one example in which you learned from your mistakes.

Norma is looking for a summer internship in her field of environmental science. On her résumé, she notes that she has taken several courses that she actually will not take until next semester. She also describes several volunteer leadership positions that she held. In reality, she worked as a “laborer” cleaning up the river and the local dunes.

Is Norma behaving ethically? Define ethics and explain Norma's behavior.

You know that several of your classmates are cheating on tests and papers with students from another school. Because the schools are not part of an integrated system, the cheating is quite successful. The students are doing well, while not working hard at all. You are frustrated and angry and don't know what to do.

Use the Three-Step Problem-Solving Approach to find a solution.

Adina works as a trainer at a gymnastics academy. This is a nationwide company with academies all over the country. They have more students accepted to the Junior Olympics and Olympics than any other group. But the corporate mission statement is to "foster a love of the sport and physical fitness at all levels."

Adina notices that some of the senior trainers push students beyond accepted limits and work them more hours than recommended. In fact, many seem to focus only on promising candidates, even to the point that inexperienced students are getting hurt.

When she mentions this to a colleague, she's told that this is how things work. It's important to "keep up their success rate." How can Adina evaluate and address this unethical behavior?

Define *problem* and *problem solving*. Describe the Three-Step Approach to Problem Solving. Think of a current problem you are facing and describe it using the three-step approach.

Jules has a double major in business and technology. He is proactive and creative, but the only job he has been offered is in the credit department of a bank.

On the production floor of a large automotive supplier Jeff notices a defect in one of the major engine parts. It then becomes apparent that it's not just this one part but a whole "lot" making up about a day's worth of production inventory. He reports this to his direct manager who then tells him that this isn't a crucial part for any safety features and it will cost the company hundreds of thousands of dollars in lost production if they have to remake the parts. Is this an ethical dilemma and if so, explain who is involved and what the possible outcomes could be. Could Jeff be protected under the whistle-blower law? Is the situation illegal?

What are the levels that OB uses to view the world? Give at least one example of each.

Use a specific example to explain how you would use OB concepts to identify the right problem.

LMB Designs has suffered from lower profits for several years. As result, management cut back on bonuses and health care coverage. Not surprisingly, there has been an increase in employee turnover. Unfortunately, it is the "better," more highly qualified employees who are leaving. How can LMB analyze and address this problem?

You have been chosen to be part of a selection committee to choose the Trailblazer of the Year Award at your local business college. The panel comprises three undergraduate students, three faculty members, one staff member, one alumni member, and the associate dean of the college. You personally know and are good friends with two of the candidates but don't share this with the committee. Define the problem, select a solution (resolving, solving, dissolving) listing out the consequences of the solution. Be sure to include the pros and cons, who wins and who loses, etc.

What are the basic elements for selecting an effective solution? Give examples of each.

Answer Key

Test name: Ch1 _Organizational Behavior: A Practical, Problem-Solving Approach_3e

FALSE

There is no single best way to manage people, teams, or organizations. An important part of your success is your ability to know which tools to use and under what circumstances. This is described as a contingency approach to managing people and is the foundation of contemporary OB.

FALSE

Common sense is especially weak in responding to the unknown or unexpected. And because it focuses on the past, common sense lacks vision for the future.

TRUE

In Table 1.2 the example of “motivated blindness” is: Baseball officials failed to notice they’d created conditions that encouraged steroid use.

TRUE

Organizational behavior includes knowing about managing yourself, as well as others, up, down, and sideways.

TRUE

These are all examples of student cheating. Fifty-one percent of high school students reported cheating on exams.

TRUE

A problem is a difference or gap between an actual and a desired state or outcome. Problems arise when our goals (desired outcomes) are not being met (actual situation). In turn, problem solving is a systematic process for closing these gaps.

TRUE

Such dilemmas are frequent and consequential and we are surrounded by such situations at work and at school.

FALSE

Unethical behavior reduces cooperation, loyalty, and contributions, which of course hurts the performance of individuals, teams, and organizations.

FALSE

In 2019, Southwest Airlines mechanics created widespread slowdowns in flights to pressure the company in negotiations with their union, a notable instance of how widespread unethical behavior has resulted in virtually no legal consequences.

TRUE

This is the bottom-line for your personal effectiveness. Knowledge of both person and situation factors must be considered.

FALSE

Even though these laws exist, they do not sufficiently protect employees. For example, Linda Almonte, president at Chase Bank, was fired and her career was ruined when she went up the chain of command to report errors in the sale of past-due credit card accounts.

FALSE

A problem is a difference or gap between an actual and a desired situation.

FALSE

OB concepts and theories can be classified into two broad categories: person factors and situation factors.

TRUE

Notably, the interactional perspective states that behavior is a function of interdependent person and situation factors.

TRUE

To assemble our framework, we use the systems approach as our foundation.

C

The Future of Jobs report by the World Economic Forum provides compelling supporting evidence that firms tend to weigh soft skills so heavily when hiring.

C

The term organizational behavior (OB) describes an interdisciplinary field dedicated to understanding and managing people at work.

B

OB draws on research and practice from many disciplines to deal with how people behave at work, including: anthropology, economics, ethics, management, organizational theory, political science, psychology, sociology, statistics, and vocational counseling.

E

Organizational behavior includes knowing about managing yourself, as well as others, up, down, and sideways.

A

A contingency approach calls for using OB concepts and tools as situationally appropriate, instead of trying to rely on “one best way.”

D

Practicing these guidelines can increase your self-awareness and a good way to learn about yourself is through the chapter self-assessment.

A

At first glance the contingency approach may look like simple common sense. But it's different. It attempts to overcome the limits of common sense with how it does not settle for traditional options if another solution may be more practical and effective. Similarly, understanding the systems approach to issues provides more insight than common sense alone. The goal of OB is to give you more than common sense and instead enhance your understanding of situations at work and guide your behaviors.

B

Soft skills relate to human interactions and include both interpersonal skills and personal attributes. They include problem solving, critical thinking, creativity, and people management.

A

According to Table 1.1, the top four skills most desired by employers are critical thinking, problem solving, creativity, and people management.

A

For most jobs you are selected for your technical skills, your ability to do the given job (i.e., hard skills). What it takes to get promoted is your perceived ability to get things done through others and manage people. Figure 1.1 illustrates how technical or job-specific skills decline in importance as you move to levels of higher responsibility, while the need for personal skills increases.

A

Performance gives credibility and know that early in your career that your bosses will be looking for more than job performance. Knowledge of OB is critical to your individual performance.

B

Soft skills are the skills you need to interact with, influence, and perform with others. Soft skills relate to our human interactions and include both interpersonal skills and personal attributes.

E

Figure 1.1 illustrates how technical skills decline in importance as you move to levels of higher responsibility, while the need for personal skills increases.

D

Common sense is often based on experience or logic, both of which have limits, and it suffers three major weaknesses you need to be aware of—over-reliance on hindsight, lack of rigor, and lack of objectivity. An important part of your success is your ability to know which tools to use and under what circumstances. This is described as a contingency approach to managing people.

A

If you lack rigor, you aren't especially thorough or precise and you are unlikely to define the problem accurately, identify the true causes, or recommend the right courses of action.

D

Commonsense is often based on experience or logic, both of which have limits. In this case, Dev is relying on hindsight, believing that what worked before should work again. Dev is not considering how much he wanted to join the discussion group and how high his interest level is.

E

Personal attributes with which we build goodwill and trust and demonstrate integrity include attitudes, personality, teamwork, and leadership.

A

The three steps in our applied approach to problem solving begin with defining the problem. Julio doesn't know *why* Kevin is unhappy about Margarite. Instead, he jumps right to taking action.

C

If you map recommendations onto the causes of the problem, you can be more confident that as you remedy the causes, you will solve or at least ease the underlying problem.

B

Ethical dilemmas are situations with two choices, neither of which resolves the situation in an ethically acceptable manner.

C

Some researchers would contend that instead of ill intent, cognitive biases and organizational practices “blind managers to unethical behavior, whether it is their own or that of others.” Zoe’s behavior may be partially unconscious, and partially a desire to protect her friends, whom she may consider to be excellent employees. With lack of distinct direction from above, she makes her own choices.

C

When we set goals and incentives to promote a desired behavior, they can encourage a negative one. In this case, Barbara might unconsciously pad her bills.

C

To address motivated blindness, which occurs when we overlook the unethical behavior of another because it’s in our interest to remain ignorant, we need to root out conflicts of interest.

C

Suggesting solutions and not just complaints will make it more difficult for the offender to disregard your complaint.

A

Ethics is concerned with behavior—right versus wrong, good versus bad, and the many shades of gray in between.

D

Lying about skill sets is the most common lie (62 percent). This is a result of a survey of more than 2,500 hiring professionals.

A

Ethical dilemmas involve situations with two choices, neither of which resolves the situation in an ethically acceptable manner.

B

Whistle-blowing is revealing a behavior that troubles you to management or to the authorities.

A

Table 1.2 states that ill-conceived goals occur when we set goals and incentives to promote a desired behavior, but they encourage a negative one.

A

The effect of setting goals and incentives to promote a desired behavior, but instead these goals encourage negative ones, is described as ill-conceived goals in Table 1.2. Calvin's goal of handling 12 calls per hour encourages his negative behavior toward customers with complex situations.

B

According to Table 1.2, motivated blindness is when we overlook the unethical behavior of another when it is in our interest to remain ignorant.

B

According to Table 1.2, motivated blindness is when we overlook the unethical behavior of another when it is in our interest to remain ignorant. Cheryl believes it is in her best interest for Maria to remain on her team, and therefore, she overlooks Maria's unethical behavior.

C

Table 1.2 states that indirect blindness occurs when we hold others less accountable for unethical behavior when it's carried out through third parties.

D

When we are less able to see others' unethical behavior when it develops gradually, this is called the slippery slope (see Table 1.2).

B

Table 1.2 states that motivated blindness overlooks the unethical behavior of others when it is in our interest to remain ignorant.

E

Table 1.2 states that overvaluing outcomes is when we give a pass to unethical behavior if the outcome is good.

E

Table 1.2 states that the remedy for ill-conceived goals is to brainstorm unintended consequences when devising goals and incentives and consider alternative goals that may be more important to reward.

A

Table 1.2 states that the remedy for motivated blindness is to root out conflicts of interest. Simply being aware of them doesn't necessarily reduce their negative effect on decision making.

B

Table 1.2 states that the remedy for indirect blindness when handing off or outsourcing work is to ask whether the assignment might invite unethical behavior and take ownership of these implications.

D

The three-step approach will provide an approach that is both practical and effective across a variety of situations.

C

Ethics gets priority because many OB topics—reward systems, decision making, leader behavior, and organizational culture—have a direct and substantial influence on the ethical conduct of individuals and organizations.

E

A problem is a difference or gap between an actual and a desired situation.

B

A problem is a difference or gap between an actual and a desired situation.

B

Our applied approach to problem solving proposes three activities or steps: Step 1: Define the problem. Step 2: Identify the OB concepts or theories to use to solve the problem. Step 3: Make recommendations and (if appropriate) take action.

C

OB concepts and theories can be classified into two broad categories: person factors and situation factors.

B

Because the downsizing event was the same for all of the employees, it was a situation factor.

A

The interactional perspective states that behavior is a function of interdependent person and environmental factors.

The interactional perspective states that behavior is a function of interdependent person and situation factors.

B

Some people quit because they can't get along with their boss/leader or coworkers (a group/team level process).

C

A faulty reward system (an organizational-level process) that unfairly distributes raises, bonuses, and recognition is another common reason people quit.

A

Some people quit because their job just doesn't fulfill what they value, such as challenging and stimulating work (an individual-level input).

B

Group/team level considerations include: Have there been any changes or other causative factors in a work group, including the manager, which might make work less satisfactory? How does turnover in a specific group compare to other groups in the organization?

E

Situation characteristics include: Have there been changes in the situation (such as a sudden increase in employment opportunities at better wages)? Have the working conditions changed in any meaningful way?

C

Organizational-level considerations include: Has the organization changed ownership, or rewritten company policies, or is it enforcing policies differently?

A

As shown in Figure 1.3, this is the case because inputs affect processes, and processes affect outcomes. Also, feedback loops exist from outcomes to inputs and processes.

C

Figure 1.3 identifies personal factors and situation characteristics as inputs. This framework implies that person factors and situation characteristics are the initial drivers of all outcomes that managers want to achieve.

D

This framework implies that person factors and situation characteristics are the initial drivers (inputs) of all outcomes that managers want to achieve. This is the case because inputs affect processes, and processes affect outcomes. And since events are dynamic and ongoing, many outcomes will in turn impact inputs and processes. See Figure 1.3. Organizational turnover is an outcome. The Life is Sweeter on Mars example in OB in Action box lists one outcome as: Mars posts a very low turnover rate (5 percent), which is a sign that employees are highly satisfied with their jobs.

A

Resolving problems is arguably the most common form of response for managers and simply means choosing a satisfactory solution, one that works but is less than ideal.

A

When facing a problem, first managers should decide if they want to resolve, solve, or dissolve the problem. Solving problems is the optimal or ideal response.

C

Dissolving problems requires changing or eliminating the situation in which the problem occurs.

The first step is determining the selection criteria, for example, the effect on bottom-line profits, you and classmates or coworkers, reputation with customers or the community, your own values, and the ethical implications.

Consequences: Consider the consequences of each alternative, especially the trade-offs between the pros and the cons.

Short Answer

At first glance the contingency perspective may look like simple common sense. But it's different. It attempts to overcome the limits of common sense with how it does not settle for traditional options if another solution may be more practical and effective. Similarly, understanding the systems approach to issues provides more insight than common sense alone. The goal of OB is to give you more than common sense and instead enhance your understanding of situations at work and guide your behaviors.

Moreover, common sense has three main weaknesses that you need to consider and avoid. (1) Over-reliance on hindsight. Common sense excels in well-known scenarios with predictable outcomes. But much of modern business involves uncertainty and adapting to change. In other words, common sense is especially weak in responding to the unknown or unexpected. And because it focuses on the past, common sense lacks vision for the future. (2) Lack of rigor. If we are comfortable with our commonsense response, we may not apply the effort required to find the real problem when considering inputs, which likely results in not choosing the optimal course of action or solution. If you lack rigor, then you are unlikely to measure the right predictors and outcomes. (3) Lack of objectivity. Common sense can be overly subjective and lack a basis in science. In such cases we are not always able to explain our reasoning to others, let alone apply it to new situations. One way that OB moves beyond the limitations of common sense is by its systematic and science-based approach to understanding people and how they behave at work. OB therefore can make you more attractive to potential employers and more effective once employed.

Hard skills are the technical expertise and knowledge to do a particular task or job function, such as financial analysis, accounting, or operations. Soft skills relate to our human interactions and include both interpersonal skills and personal attributes. For most jobs you are selected for your technical skills, your ability to do the given job. Often performance in the current job will be a primary consideration in being promoted. However, many employees may fail to realize that your perceived ability to get things done through others and manage people will be another important deciding factor. Figure 1.1 illustrates how technical or job-specific skills decline in importance as you move to levels of higher responsibility, while personal skills increase.

Short Answer

Personal attributes address attitude, personality, teamwork, and leadership. These attributes help to build goodwill and trust and demonstrate integrity. For example, are you outgoing? Introverted? How do you handle conflict? Interpersonal skills include active listening, positive attitudes, and effective communication. These attributes help foster respectful interactions. For example, if you're a member of a team and your project is off schedule, how would you respond? Would you be annoyed and put pressure on all members? Would you look to place blame? Would you try to build consensus on a workable solution?

Short Answer

Criminal or not, unethical behavior negatively affects not only the offending manager but also his or her employees. Unethical behavior by your coworkers, including company executives, can make you look bad and tarnish your career.

First of all, you can look for a job at a sustainable business. These are companies led by those who listen, who foster cultures in which employees are not scared to point out problems and in which staff feel they have a personal responsibility to enact corporate values.

During an interview, you need to be upfront about the approach your company took. Did you feel that their goals were ill-conceived? Did they experience motivated blindness? Indirect blindness? Did they overvalue outcomes? Was it a slippery slope situation?

Remember that while criminally minded people exist in the workplace, most people have good intentions, and you aren't sure about your employers' culpability.

To be successful in school and in your career, you need to know who you are and what you want. "When you know yourself, you are comfortable with your strengths and not crippled by your shortcomings. ... Self-awareness gives you the capacity to learn from your mistakes as well as your successes." You need to know yourself in order to be authentic. This is essential to influencing others.

Ethics is concerned with behavior—right versus wrong, good versus bad, and the many shades of gray in between. In terms of job hunting, an analysis of 2.6 million job applicant background checks by ADP Screening and Selection Services revealed that “44 percent of applicants lied about their work histories, 41 percent lied about their education, and 23 percent falsified credentials or licenses.”

Norma hopes to get the position, thinking that she will be able to do it, and it’s only an internship....not a “real” job. She needs the experience to get a permanent job when she graduates. She may rationalize her lies, thinking that she “will” take the courses, and she did actually work on the volunteer projects. Besides, she thinks she could have done a lot more on the projects than just the grunt work she was assigned. Some people just don’t see their actions as unethical.

Wanda doesn’t realize that if she is “found out,” she risks not only the internship but also looking bad and tarnishing her future career.

Here are the three steps in our applied approach to problem solving.

Step 1: Define the problem. Define problems in terms of desired outcomes. What do you want to happen? Do you want to level the playing field? Punish the cheaters? This is a problem for you personally.

Step 2: Identify potential causes using OB concepts and theories. Consider personal and individual factors.

Step 3: Make recommendations and (if appropriate) take action. Consider any individual or organization (in this case, institution) level processes that could be put in place to prevent this from happening in the future.

Short Answer

A few suggestions for handling unethical behavior are: (1) It's business, treat it that way. Ethical issues are business issues, just like costs, revenues, and employee development. Therefore, collect data and present a convincing case against the unethical conduct just as you would to develop a new product or strategy. (2) Accept that confronting ethical concerns is part of your job. Whether it is explicit in your job description or not, ethics is everybody's job. If you think something is questionable, then take action. (3) Challenge the rationale. Many issues occur despite actual policy against it. If this is the case, then ask: "If what you did is common practice or okay, then why do we have a policy forbidding it?" Alternatively, and no matter the rationale, you can ask: "Would you be willing to explain what you did and why in a meeting with our superiors or customers, or better still, during an interview on the evening news?" (4) Use your lack of seniority or status as an asset. While many employees unfortunately use their junior status to avoid confronting ethical issues, being junior can instead be an advantage. It enables you to raise issues by saying, "Because I'm new, I may have misunderstood something, but it seems to me that what you've done is out of bounds or could cause problems." (5) Consider and explain long-term consequences. Of course many ethical issues are driven by temptations and benefits in the short term. It, therefore, can be helpful to frame and explain your views in terms of long-term consequences. (6) Solutions, not just complaints. When confronting an issue, you will likely be perceived as more helpful and taken more seriously if you provide an alternative course or solution. Doing so will also make it more difficult for the offender to disregard your complaint.

Short Answer

A problem is a difference or gap between an actual and a desired situation. In turn, problem solving is a systematic process of closing these gaps. Our applied approach to problem solving proposes three activities or steps along the way: Step 1: Define the problem. Step 2: Identify the OB concepts or theories to use to solve the problem. Step 3: Make recommendations and (if appropriate) take action.

Short Answer

Research in psychology and OB supports the interactional perspective, noting that behavior is a function of interdependent person and situation factors. Given that Jules needs a job, how would you evaluate this situation?

OB concepts and theories can be classified into two broad categories: person factors and situation characteristics. Person factors represent the infinite number of characteristics that give individuals their unique identities. Situation characteristics consist of all the elements outside of ourselves that influence what we do, how we do it, and the ultimate results of our actions.

For decades, researchers and managers have debated what influences behavior more—person or situation factors. Many observers believe that some people are by their nature better suited than others to perform well at work. Others believe that some people are clearly better in a given job or situation. No particular person would outperform every other person in every possible job. This common view is supported by research in psychology and OB. The interactional perspective states that behavior is a function of interdependent person and situation factors. It is important to note that neither people nor situations are static. People change, situations change, and the two change each other. The bottom-line implication for OB and your work life is that knowledge of one without the other is insufficient.

But, someone who is proactive and creative may be a great fit for a company in the high-tech sector that would benefit from risk-taking individuals, but may be a poor fit for a company that rewards routine and predictable behavior, such as a bank. On the other hand, the current economic climate will impact whether Jules can wait for another opportunity, contemplate a move to a different environment or take the position with the knowledge that he won't stay there long.

Short Answer

This is an ethical dilemma because it is a situation with more than one choice, neither of which resolves the situation. Jeff could go above his manager's head and report it to the quality manager, or he could do nothing. He asks himself, "is this fair to the new owner of the vehicle to have a defective part without getting a discount or exactly the quality they were expecting? What if something does go wrong in the future?" Jeff could be protected under the Dodd-Frank Act of 2010 because this may be considered financial fraud, which is illegal and unethical.

Short Answer

Another lens through which OB sees the world relies on organizational levels. OB distinguishes among three: individual, group, and organizational. As an example of how being sensitive to these levels helps in considering real-world problems, consider the many reasons why people quit their jobs: (1) Some people quit because their job just doesn't fulfill what they value, such as challenging and stimulating work (an individual-level input). (2) Others quit because they can't get along with their boss/leader or coworkers (a group/team level process). (3) A faulty reward system (an organizational-level process) that unfairly distributes raises, bonuses, and recognition is another common reason people quit.

Short Answer

Nothing causes more harm than solving for the wrong problem. If you don't define the problem accurately, then all subsequent problem-solving efforts are adversely affected. This happens because people end up focusing on a symptom or the wrong problem. Using the person-environment distinction allows you to consider unique individual factors as well as external factors that might be the source of the problem. The structural levels of individual, group, and organization will allow you to look at each level for possible reasons. Such considerations could include: (1) Person factors: Do the people who have quit share something in common? Is there anything in their personality that makes work difficult for them? Is the level of turnover greater than for your industry as a whole? (2) Environmental characteristics: Have there been changes in the environment (such as a sudden increase in employment opportunities at better wages)? Have the working conditions changed in any way? (3) Individual level: Can you identify any change in how the company treats employees or what it expects of them? (4) Group/team level: Have there been any changes or other causative factors in your work group, including your manager, that might make work less satisfactory? How does turnover in your group compare to other groups in the organization? (5) Organizational level: Has the organization changed ownership, or rewritten company policies, or is it enforcing policies differently?

Short Answer

Using the Three-Step Approach to Problem Solving:

1. Define the problem: If your organization's most valuable and high-performing people quit, then a problem likely exists.

2. Highlight the causes:

Potential Cause 1—Person factors often represent key causes of turnover. Concern about the stability of the company and lack of personal rewards (bonuses) might cause turnover.

Potential Cause 2—Situation factors frequently are causes of turnover. For example, people may be quitting because the company culture has been damaged by poor revenues and, therefore, a perceived lack of support exists.

Potential Cause 3—Organizational processes can also cause turnover. Perceived injustice is often a powerful driver of employee turnover; in this case, modifying the health care plan has impacted everyone—most especially those employees with families.

3. Generate effective recommendations:

Potential Cause 1—Communication can help assure employees of the steps that company is taking to secure its future. The company can solicit employee recommendations for rewards other than bonuses (until stability is achieved).

Potential Cause 2—GBL can work to build a team spirit, so that employees can be part of re-establishing the company's position.

Potential Cause 3—Assuming GBL made cuts to health care with minimal employee input, the company might review the options. Perhaps employees can choose from a series of plans that best meets their needs and budgets.

Short Answer

First, list out the possible solutions, next decide if you want the problem to be resolved, solved, or dissolved. Resolving problems is arguably the most common form and simply means choosing a satisfactory solution, one that works, but is less than ideal. Solving the problem is the ideal response, dissolving problems requires changing or eliminating the situation in which the problem occurs. Consider the consequences of each alternative and list those out.

Short Answer

After deciding whether to resolve, solve, or dissolve your identified problem, you then need to select the most effective solution. Three common elements to selecting the most effective solution are: (1) Selection criteria. Determine the basis (criteria) for the decision. (2)

Consequences. Consider the consequences of each alternative. (3) Choice process. Decide who will be involved in choosing the solution. If more than one person is involved, then you need to agree on the method.
