Short Answer Questions

95. Financial management builds upon the disciplines of economics and accounting. Complete the following statements:

- a) Economics provides the financial manager with...
- b) Accounting provides the financial manager with...

Economics provides the financial manager with the following:

- A broad picture of the economy and the key measures that influence the corporation's decisions and performance (gross domestic product, industrial production, disposable income, unemployment, inflation, interest rates, taxes).
- An understanding of the institutional structure of our mixed capitalist system (government regulation, Bank of Canada, chartered banks, investment dealers, trusts, insurance companies, financial markets). Capital is accumulated and valued in competitive financial markets, affecting its cost and availability to the firm.
- A structure for decision making (risk analysis, pricing theory through supply and demand relationships, comparative return analysis).

Accounting provides the financial manager with the following:

- Much of the language of finance (assets, liabilities, cash flow).
- Financial data (income statements, balance sheets, statement of cash flows). The financial manager must know how to interpret and use this data in allocating the firm's financial resources to generate the best value on the basis of return and risk.

Finance links economic theory with the numbers of accounting, and all corporate managers—whether in the area of production, sales, research, marketing, management, or long run strategic planning—must know what it means to assess the financial performance of the firm.

Topic: 01-01 The Field of Finance

96. Selecting profit maximization as the primary goal of the firm may not increase its value, because a profit-only focus has several drawbacks. List and describe these drawbacks.

1. **Risk may increase as profit changes.** More debts or investment in projects with cyclical earnings to increase profits also increase risk. Shareholders may consider the increase in risk insufficient for the increased earnings.
2. **Profit fails to take into account the timing of benefits.** We might be indifferent between the following alternatives if our emphasis were solely on maximizing earnings, as the total is the same. However, alternative B is clearly superior, because larger benefits occur earlier; we could reinvest the difference in earnings for alternative B for an extra period.

Earnings per Share

	Period 1	Period 2	Total
Alternative A	\$1.50	\$2.00	\$3.50
Alternative B	\$2.00	1.50	3.5

3. Accurately measuring profit is almost impossible. Economics and accounting define profit (earnings) differently. Furthermore, earnings may not correspond to current values due to the methods used to capture accounting accruals and the amortization of capital expenditures. As well, financial statements are subject to manipulation by managers, so reported earnings may be misleading.

Topic: 01-07 Maximizing Shareholder Wealth

97. What 4 factors will investors consider in the analysis of a firm market share value?

- The risk inherent in the firm (nature of its operations and how the firm is financed)
- The time pattern of the firm's earnings and cash flows
- The quality and reliability of reported earnings (as a guidepost to future earning power)
- Economic and political factors

Topic: 01-08 Measuring the Goal

98. According to agency theory, other than maximizing shareholder wealth what other self-interests do financial managers have?

Financial managers are interested in:

- Maintaining their jobs (may discourage value-enhancing takeovers)
- Protecting "private spheres of influence"
- Maximizing their own compensation package
- Arbitrating among the firm's different stakeholders (shareholders, creditors, employees, unions, environmentalists, consumer groups, Canada Revenue Agency, government regulatory bodies, customers)

Pursuit of these interests may emphasize short-term results over long-term wealth building. Management may also perceive the risk of investment decisions differently from shareholders, leading to different points of view as to the best decision regarding the investment of the firm's resources.

Topic: 01-09 Market Share Price

99. Besides maximizing shareholder wealth, what should corporations consider to be goals? List and briefly explain.

Corporations, which receive their operational charters from society, should consider socially desirable actions that include:

- Community works (charitable giving, employment opportunities for marginalized groups)
- Customer respect (safe products, fair pricing, appropriate advertising and communication)
- Strong employee relations (fair benefits and compensation, equitable hiring, education, health and safety)
- Environmental health (pollution controls, appropriate use and renewal of resources)
- Human rights promotion (respecting the dignity of individuals globally)

100. What are the 4 components of good corporate governance?

Good corporate governance results from:

- Board composition (strong leadership, competent education, balanced competencies)
- Director and officers ownership positions in the firm (other than by stock options)
- A published code of ethics
- Independent audits and a financially literate audit committee

Learning Objective: 01-04 Debate alternative goals of the firm on the basis of social or management interests.

Topic: 01-11 Social Responsibility

101. List the 4 components of good corporate governance and identify additional measures that could be added to strengthen corporate governance.

Good corporate governance results from:

- Board composition (strong leadership, competent education, balanced competencies)
- Director and officers ownership positions in the firm (other than by stock options)
- A published code of ethics
- Independent audits and a financially literate audit committee

There have been increased demands for additional corporate governance practices by firms, despite the increased costs of compliance and sometimes delays in timely reporting of financial results. These measures include:

- Separating the roles of CEO and chair of the board
- Independent board of directors members
- Improved accounting standards (stock options, internal audit controls, "off-balance sheet items")
- More stringent reporting and disclosure requirements
- Closer monitoring by regulatory bodies (securities commissions)
- Questioning the use of "dual class" shares

103. What are the characteristics of a sole proprietorship? What are the drawbacks?

A sole proprietorship is characterized by:

- Single-person ownership
- Simplicity of decision making
- Low organizational and operating costs
- Unlimited liability to the owner (can lose personal assets in settlement of firm's debts)
- Profits or losses taxed in hands of individual owner

Most small businesses with one to ten employees are sole proprietorships. The unlimited liability is a serious drawback and few lenders are willing to advance funds to a small business without a personal liability commitment from the owner.

Topic: 01-13 Functions of Financial Management

104. What are the characteristics of a partnership? What are the advantages compared to a sole proprietorship?

A partnership is characterized by

- Multiple ownership
- Ability to raise more capital and share ownership responsibilities
- Unlimited liability for the owners (one wealthy partner may have to bear a disproportionate share of losses in a **general partnership**)
- Taxation of profits or losses are allocated in percentages to partners

To circumvent the unlimited liability feature, a special form of partnership, called a **limited partnership**, can be utilized. Under this arrangement one or more partners are designated general partners and have unlimited liability for the debts of the firm; other partners are designated limited partners and are liable only for their initial contribution. The limited partners are normally prohibited from being active in the management of the firm.

Topic: 01-13 Functions of Financial Management

105. What are the characteristics of a corporation?

A **corporation** is characterized by:

- A legal entity unto itself (may sue or be sued, engage in contracts, acquire property)
- Ownership by shareholders (each with limited liability, although bankers may require small business owners to give their personal guarantee)
- Divisibility of the ownership (many shareholders)
- Continuous life span (not dependent on life of one shareholder)
- Taxation on its own income (individual shareholders pay tax on dividends or capital gain tax when shares are sold)

In terms of revenue and profits produced, the corporation is by far the most important form of economic unit.

106. What 2 choices does the board of directors have to distribute earnings of a corporation?

Earnings generated by the corporation are owned equally by each shareholder, and the board of directors has two choices for these earnings.

Earnings can be:

- Paid out as dividends (shareholders pay tax on dividends: a dividend tax credit reduces the effect of double taxation)
- Reinvested in the firm (recorded as retained earnings)
