#### **MATCHING**

Identify the letter of the choice that best matches the phrase or definition.

a. Web servers

b. XHTML
c. usability
d. broad
e. hyperlinks

f. HTML
g. hierarchical
i. log
j. W3C

- 1. Every Web site is stored on, and runs from, one or more of these.
- 2. With these, a Web site user does not have to view information linearly.
- 3. This markup language can be used with other Web technologies to provide additional Web page functionality.
- 4. In this markup language, all elements must be nested properly.
- 5. By making other Web pages accessible only through the home page, this kind of Web site forces the user to return to the home page in order to move from one Web page to another.
- 6. This kind of Web site is one that has many levels of pages.
- 7. The organization with de facto responsibility for governing HTML.
- 8. This is the measure of how well a product allows a user to accomplish his or her goals.
- 9. You can use this kind of software to publish your Web pages to a Web server.
- 10. A kind of file that lists all of the Web pages that have been requested from a Web site.

#### **ESSAY**

1. What is the difference between a text editor, an HTML text editor, and an HTML object editor?

#### ANS:

A text editor is a program that allows a user to enter, change, save, and print text, such as HTML. Text editors do not have many advanced features but they do allow you to develop HTML documents easily. You can also create Web pages using an HTML text editor, such as EditPlus or BBEdit (MacOS). An HTML text editor is a program that provides basic text-editing functions, as well as more advanced features such as color-coding for various HTML tags, menus to insert HTML tags, and spell checkers. An HTML object editor, such as EiffelStudio object editor, provides the additional functionality of an outline editor that allows you to expand and collapse HTML objects and properties, edit parameters, and view graphics attached to the expanded objects.

PTS: 1 REF: HTML 13 TOP: Critical Thinking

2. List at least five basic steps to test content and functionality of a Web site.

#### ANS:

- 1) Validating each Web page by running it through the W3C markup validation service
- 2) Proofreading page content and titles to review for accurate spelling and grammar
- 3) Checking links to ensure that they are not broken and are linked correctly
- 4) Checking graphics to confirm they appear properly and are linked correctly
- 5) Ensuring that accessibility and internationalization issues are addressed
- 6) Testing forms and other interactive page elements
- 7) Testing pages to make sure they load quickly, even over lower-speed connections
- 8) Printing each page to check how printed pages look

PTS: 1 REF: HTML 22 TOP: Critical Thinking

3. Define compatibility testing and discuss its purpose.

#### ANS:

Compatibility testing is done to verify that the Web site works with a variety of browsers and browser versions. Initially, test using the browsers that your audience is most likely to use. Different browsers display some aspects of Web pages differently, so it is important to test Web pages in several different browsers to verify they appear correctly in each browser. If you have used technologies that are not supported by older browsers or that require plug-ins, consider changing the content or providing alternative Web pages for viewing in older browsers. If your audience uses both PC and Macintosh computers, you need to test the Web pages using browsers on both platforms. You may also want to test the Web pages in several versions of the same browser (usually the two most recent versions), in the event users have not yet upgraded.

PTS: 1 REF: HTML 24 TOP: Critical Thinking

#### **CASE**

# **Critical Thinking Questions**

Case 1-1

Mark is charged with setting up a method for distributing information at the university where he works.

- 1. Mark has been told that the content he needs to distribute will include course lists with student data, lecture notes, and slides that should be available only to the students in a given course. Which of the following technologies is the best choice for him?
  - a. An extranet because it is the most inclusive technology.
  - b. An extranet because it is a private network that can be limited to sharing information among members of a particular group.
  - c. An intranet because it is a private network that can be limited to sharing information among members of a particular group.
  - d. None of the above

ANS:

 $\mathbf{C}$ 

PTS: 1 REF: HTML 5 TOP: Critical Thinking

2. When Mark's assignment changes, and he needs to develop a solution for use by the finance office at the university, he is told that he will need to allow vendors to submit their bills online and to check to see if the university has paid their bills. Which of the following technologies is the best choice for him?

a. intranet	c. Internet
b. extranet	d. vendornet
