

Intimate Relationships, 8e (Miller)
Chapter 2 Research Methods

1) Which of the following statements does NOT provide a reason for understanding the methods behind relationship science?

- A) Much of popular relationship advice is simply made up.
- B) Personal experiences are more important for understanding relationships than statistics.
- C) There are too many charlatans and hucksters in the relationship advice field.
- D) Sound relationship research has an important influence on behavior in the real world.

Answer: B

2) Most relationship science studies:

- A) were conducted in the Age of Enlightenment.
- B) were conducted in the mid-1850s.
- C) were conducted in the early 1930s.
- D) have been conducted in the last 50 years.

Answer: D

Accessibility: Keyboard Navigation

3) Beginning in the 1960s and 1970s, relationship studies started to:

- A) emphasize laboratory experiments.
- B) be increasingly criticized as a pseudoscience.
- C) move away from a data-driven focus.
- D) employ virtual reality tools to gather data.

Answer: A

Accessibility: Keyboard Navigation

4) The work of Donn Byrne and his colleagues in the 1960s on attitude similarity in liking is important in the history of relationship science because it demonstrated that:

- A) relationships can be studied rigorously in the laboratory.
- B) relationships cannot be studied through methodical procedures alone.
- C) personal diaries are an important tool in relationship research.
- D) personal diaries are misleading in relationship research.

Answer: A

Accessibility: Keyboard Navigation

5) Donn Byrne was one of the first scientists to study _____ in a laboratory.

- A) liking
- B) marriage
- C) divorce
- D) psychology

Answer: A

Accessibility: Keyboard Navigation

6) Today, relationship science:

- A) uses diverse samples of people.
- B) studies relationships over long periods of time.
- C) examines various types of relationships.
- D) All of the answers are correct.

Answer: D

Accessibility: Keyboard Navigation

7) Which type of research questions seeks to delineate the pattern of relationships as fully and accurately as possible?

- A) Causal
- B) Exploratory
- C) Explicit
- D) Implicit

Answer: B

Accessibility: Keyboard Navigation

8) Which of the following types of research questions seeks to determine if an event has a meaningful effect on a subsequent outcome?

- A) Causal
- B) Exploratory
- C) Explicit
- D) Implicit

Answer: A

Accessibility: Keyboard Navigation

9) Which of the following is NOT cited in the textbook as a source of research questions?

- A) Personal experience
- B) Social problems
- C) Previous research
- D) Popular literature

Answer: D

Accessibility: Keyboard Navigation

10) A researcher who decides to study domestic violence because of a sudden increase in incidents of abuse is obtaining his/her research question from:

- A) personal experience.
- B) a social problem.
- C) previous research.
- D) the theories of relationships.

Answer: B

Accessibility: Keyboard Navigation

11) The two broad types of questions relationship researchers ask are:

- A) those that describe events as they naturally occur and those that seek to establish causal connections.
- B) those that address social problems and those that seek to build theories.
- C) those that seek to describe the status quo and those whose purpose it is to effect change in a situation.
- D) those involving romantic partnerships and those addressing all other types of relationships.

Answer: A

12) Which type of sample is selected to reflect the demographic characteristics of the population of interest?

- A) Convenience samples
- B) Representative samples
- C) Random samples
- D) Cumulative samples

Answer: B

Accessibility: Keyboard Navigation

13) Which of the following types of samples are defined as samples that are composed of anyone who is readily available and consents to participate in a research study?

- A) Cumulative samples
- B) Random samples
- C) Representative samples
- D) Convenience samples

Answer: D

Accessibility: Keyboard Navigation

14) The demographic characteristics of her married subjects are not important for Mary's research question—she will accept anyone who is willing to participate. Which sample is most appropriate for her research on intimate relationships?

- A) Representative sample
- B) Random sample
- C) Convenience sample
- D) Cumulative sample

Answer: C

Accessibility: Keyboard Navigation

15) For a project in her statistics class, Jody goes to the mall to ask people questions about their relationships. Jody is using a(n):

- A) convenience sample.
- B) representative sample.
- C) unethical research procedure.
- D) longitudinal procedure.

Answer: A

Accessibility: Keyboard Navigation

16) As suggested in the textbook, convenience samples are:

- A) never helpful in answering research questions.
- B) acceptable when we are examining the fundamental aspects of the ways humans react to each other.
- C) unethical as participants are often not informed that they are part of a research study.
- D) more reliable than representative samples.

Answer: B

Accessibility: Keyboard Navigation

17) Samantha posted an advertisement on the Internet requesting single mothers to participate in a research study on single parenting. She found that those who signed up for the study were better educated and earned a higher income than average. This demonstrates:

- A) volunteer bias.
- B) experimenter bias.
- C) ingroup bias.
- D) negativity bias.

Answer: A

Accessibility: Keyboard Navigation

18) The idea that individuals willing to participate in a research study may be different from those who do not is due to:

- A) volunteer bias.
- B) convenience bias.
- C) correlational bias.
- D) research bias.

Answer: A

Accessibility: Keyboard Navigation

19) As the outdoor temperature increases, the sale of ice cream also increases. Outdoor temperature and ice cream sales:

- A) are negatively correlated.
- B) are positively correlated.
- C) are not correlated.
- D) definitely have a causal connection.

Answer: B

Accessibility: Keyboard Navigation

20) Jamilla is doing a research project. Her research question applies to whether the number of college prep classes one takes in high school is related to the number of dates one has during high school. What type of design is she most likely to use?

- A) Correlational design
- B) Experimental design
- C) Developmental design
- D) Variable design

Answer: A

Accessibility: Keyboard Navigation

21) A negative correlation between scores of love and marital satisfaction in a particular study would show:

- A) love scores increase as satisfaction scores increase.
- B) love scores decrease as satisfaction scores decrease.
- C) love scores decrease as satisfaction scores increase.
- D) love scores increase as satisfaction scores remain unchanged.

Answer: C

Accessibility: Keyboard Navigation

22) You find a correlation between parenting attitudes and compatibility. This study can tell us all of the following points EXCEPT which one?

- A) Whether parenting attitudes cause a couple to be compatible
- B) Whether the relationship between attitudes and compatibility is positive or negative
- C) The strength of the relationship between attitudes and compatibility
- D) Whether there is a relationship between attitudes and compatibility

Answer: A

Accessibility: Keyboard Navigation

23) You find a positive correlation between sexual behavior and scores of affection; all of the following situations are possible EXCEPT which one?

- A) Frequent sexual behavior leads to increased feelings of affection.
- B) Increased feelings of affection lead to more frequent sexual behavior.
- C) Feelings of love cause both sexual behavior and feelings of affection to increase.
- D) The correlation is illusory; the two are unrelated.

Answer: D

Accessibility: Keyboard Navigation

24) Which designs provide the most clear and definitive tests of causal connections?

- A) Correlational designs
- B) Experimental designs
- C) Variable designs
- D) Cross-sectional designs

Answer: B

Accessibility: Keyboard Navigation

25) A major drawback in using experimental designs in research on intimate relationships is that:

- A) many important aspects of relationships (factors) cannot be manipulated.
- B) they do not tell us about causal connections between variables.
- C) appropriate samples are never possible to obtain.
- D) they are unethical because they require the manipulation of intimate aspects of relationships.

Answer: A

Accessibility: Keyboard Navigation

26) Which of the following is the most common means of studying intimate relationships?

- A) Archival records
- B) Experience sampling
- C) fMRI
- D) Self-reports

Answer: D

Accessibility: Keyboard Navigation

27) In relationship studies, self-reports can be obtained through:

- A) verbal interviews.
- B) fMRI.
- C) electronically activated recorders.
- D) the social media profiles of the participants.

Answer: A

Accessibility: Keyboard Navigation

28) A disadvantage of self-report data is that:

- A) they do not allow researchers to get an inside look at an experience from the person's point of view.
- B) they are expensive and difficult to obtain.
- C) people may misinterpret a researcher's instructions or questions.
- D) the data must later be coded into a form that is usable.

Answer: C

Accessibility: Keyboard Navigation

29) An advantage of self-report data is that:

- A) they help in accurately recording participants' memories of incidents from many years ago.
- B) they increase the reliability of subjective data.
- C) they are inexpensive and easy to obtain.
- D) they reduce the chance of bias in the responses of participants.

Answer: C

Accessibility: Keyboard Navigation

30) Even when answered truthfully, self-reports may still be inaccurate because:

- A) they often lack reliability.
- B) it is difficult to gather them effectively.
- C) most people are reluctant to participate in research studies.
- D) people don't always understand their own actions.

Answer: D

Accessibility: Keyboard Navigation

31) A research participant's distortion of his or her real desires or actions in an attempt to make a good impression is known as:

- A) social desirability bias.
- B) self-serving bias.
- C) sampling bias.
- D) volunteer bias.

Answer: A

Accessibility: Keyboard Navigation

32) A couple who participated in a study on personal finance reported the new monthly expenditures far less than their actual expenditures. This is an example of:

- A) negativity bias.
- B) ingroup bias.
- C) social desirability bias.
- D) hindsight bias.

Answer: C

Accessibility: Keyboard Navigation

33) Anita is asked by researchers to carry a small recording device in her pocket for a week. Every so often, the device turns on and records what is happening. It is most likely that the researchers are using:

- A) self-reports.
- B) experience-sampling.
- C) a retrospective research design.
- D) immersive virtual environments.

Answer: B

Accessibility: Keyboard Navigation

34) Recent research has utilized cellphones to contact individuals. If you send text messages to participants every six hours to study how much they are thinking about their partner, it is an example of:

- A) representative sampling.
- B) random sampling.
- C) experience-sampling.
- D) sequential sampling.

Answer: C

Accessibility: Keyboard Navigation

35) If a researcher places observed behaviors on a continuum from positive to negative, it is an example of:

- A) coding.
- B) rating.
- C) correlation.
- D) reactivity.

Answer: B

Accessibility: Keyboard Navigation

36) Jane observes conversations between strangers in public spaces and keeps track of the number of times they smile in a given period. Which of the following research tools is being employed here?

- A) A coding procedure
- B) A physiological measurement
- C) A self-report
- D) A rating procedure

Answer: A

Accessibility: Keyboard Navigation

37) You want to videotape the interactions between two partners. Your study is most likely to be affected by which of the following factors?

- A) Experimenter bias
- B) Reactivity
- C) Lack of validity
- D) Bystander effect

Answer: B

Accessibility: Keyboard Navigation

38) Which type of study is most vulnerable to reactivity?

- A) Archival
- B) Questionnaire
- C) Meta-analysis
- D) Observational

Answer: D

Accessibility: Keyboard Navigation

39) An example of employing a physiological measure in research is:

- A) observing people in their natural settings.
- B) using EARs.
- C) assessing heart rates.
- D) counting the number of smiles during an interaction.

Answer: C

Accessibility: Keyboard Navigation

40) For his research study, Will looks at U.S. Census data from 1920, 1940, 1960, and 1980. He is using:

- A) archival information.
- B) correlational data.
- C) experience sampling.
- D) laboratory data.

Answer: A

Accessibility: Keyboard Navigation

41) One way that researchers ensure the ethical treatment of participants in close relationships studies is to:

- A) avoid having them discuss intimate processes.
- B) avoid concealing participants' identities.
- C) provide information about known risks and allow for voluntary consent.
- D) pay them or adequately compensate them for their participation.

Answer: C

Accessibility: Keyboard Navigation

42) Participants in studies of dating violence:

- A) often have positive reactions.
- B) are often distressed.
- C) often feel exploited after the study concludes.
- D) often feel inadequately compensated for their participation.

Answer: A

Accessibility: Keyboard Navigation

43) Which of the following is the best description of what we mean when we say something is statistically significant?

- A) The findings are important.
- B) It is unlikely the results were simply due to chance.
- C) The results will be significant for society.
- D) The findings are true.

Answer: B

Accessibility: Keyboard Navigation

44) One of the challenges of relationship research is dealing with three sources of influence. These three sources are:

- A) the two individuals and society.
- B) the couple and their two sets of parents.
- C) the two individuals and their peer group.
- D) the two individuals and their combination as a pair.

Answer: D

Accessibility: Keyboard Navigation

45) Relationship studies involve all of the following research challenges EXCEPT:

- A) obtaining data that is not independent—the response of one member of a couple may influence the other member's response.
- B) lack of certainty—statistical significance points to probabilities, not absolute truths.
- C) dealing with a combination of influences—the two individuals and the unique effects of their pairing.
- D) lack of usefulness—research only applies to the couples studied, and only in rare cases can it be generalized to others.

Answer: D

Accessibility: Keyboard Navigation

46) What are meta-analyses?

- A) They are studies that statistically combine the results from several prior studies.
- B) They are equations used to compute the size of a sample.
- C) They are statistical tests used to compare the results of two experiments or studies.
- D) They are statistical projections that predict how certain trends will continue.

Answer: A

Accessibility: Keyboard Navigation

47) To understand relationship trends from numerous studies over time, one would use:

- A) convenience samples.
- B) meta-analysis.
- C) structural equation modeling.
- D) traditional research reviews.

Answer: B
