29.	Identify and define corrections. Provide underpinning.				-	ical underpinnings in philosophical		

ANS:

The four generally recognized goals are retribution, deterrence, incapacitation, and rehabilitation. Retribution is defined as punishments that are proportionate to the seriousness of the crime committed. An example of punishment that fits this goal is capital punishment for someone who commits murder. Incapacitation is defined as punishment that deprives offenders of their liberty and removes them from society with the intent of ensuring that society cannot be further victimized by these offenders during their term of incarceration. An example of incapacitation is a period of incarceration within a correctional facility. Deterrence is defined as the prevention of crime by the threat of punishment. An example of a punishment that fits this goal is three-strikes laws. A would-be offender is hopefully deterred from committing future offenses due to a threat of a second or third strike, which results in enhanced penalties. Rehabilitation is defined as practices that are aimed solely at the recovery of the offender, regardless of the crime that was committed. An example of punishment that supports this goal is probation with intensive drug therapy, employment assistance, and counseling.

OBJ: 2.1 COG: Application

30. The continuum of sanctions refers to a broad array of sentencing and punishment options that range from simple fines to incarceration and ultimately end with the death penalty. The reason for this variety of sanctions is manifold. Identify and define the top three reasons for the variety of sanctions.

ANS:

Perhaps chief among the reasons is the desire to calibrate the sanction in a manner that is commensurate with the type of criminal behavior. This means that sanctions should be selected in such a manner that allows us to, through an additive process, weight the seriousness of the sanction, as well as the number of sanctions that are given, so that the punishment effect is as proportional to the crime as can be arranged. In addition to the desire for proportionality, there is another reason for the use of varied sanctions: the desire to save beds in prisons. The reason for this has to do with a shift in ideologies and, more specifically, the rising costs of imprisonment. Another rationale for this continuum is associated with treatment purposes. The purpose of treatment is to provide lesser sanctions to offenders who show progress in treatment, and more serious sanctions can be administered to offenders who prove to be dangerous or a nuisance to a given facility.

PTS: 1 DIF: Medium REF: Continuum of Sanctions

OBJ: 2.2 COG: Analysis

31. Define indeterminate and determinate sentences. What are the main differences between determinate and indeterminate sentencing?

ANS:

Indeterminate sentencing is sentencing that includes a range of years that will be potentially served by the offender. The offender is released during some point in the range of years that are assigned by a sentencing judge. Both the minimum and maximum times can be modified by a number of factors. This type of sentence is typically associated with treatment-based programming and community supervision objectives. Determinate sentencing consists of fixed periods of incarceration with no later flexibility in the term that is served. This type of sentencing is grounded in notions or retribution, just desserts, and incapacitation. When offenders are given a determinate sentence, they are imprisoned for a specific period of time. Once the time has expired, the inmate is released from prison.
