90. The four areas of risk are financial risk, career risk, family and social risk, and psychic risk. Financial risk deals with the amount of savings or resources that the entrepreneur puts into a venture. If the venture is not successful, the money or resources will most likely be lost. The entrepreneur will probably sign obligations that exceed his or her personal wealth. The second risk is career. The would-be entrepreneur frequently asks if he or she will be able to find a job or go back to a previous job. The new venture has no guarantees about career security. The time and energy needed to start a new venture can create family and social risk. The greatest risk to the entrepreneur may be psychic risk, which refers to the psychological impact that may cause an entrepreneur to be unable to recover from significant financial losses.

91. Entrepreneurs experience four types of stress. The first is loneliness. Although there are many people around the entrepreneur, there are few in whom he can confide. Another stress is immersion in business. A successful entrepreneur may make enough money for vacations, but never have the time to go because the business would not allow it. People problems are another type of stress. Employees or other individuals upon whom the venture's work depends may frustrate, disappoint, and aggravate the entrepreneur. Usually this happens when the entrepreneur's expectations of a high performance are not met. The last source of stress is the need to achieve. The entrepreneur usually attempts to accomplish too much and sometimes cannot manage to control the need for achievement. The three steps an entrepreneur can take to reduce stress are acknowledging its existence, developing coping mechanisms, and probing for personal unacknowledged needs. There are five ways in which an entrepreneur can cope with stress. First is networking. Networking involves sharing experiences with other business owners. Another coping mechanism is to get away from it all. These interludes help combat immersion in business. Communicating with subordinates may help to cope with stress. The entrepreneur can be aware of the concerns employees have about their jobs.

Mama

| Name | Class | Dat |
|------|-------|-----|
| | | e: |

Finding satisfaction outside of the company is also important. The entrepreneur needs to get away and enjoy life. The last way an entrepreneur can deal with stress is by delegating. Appropriate delegates need to be found and trained so the entrepreneur can gain time away from the business.

- 92. In a broad sense, ethics are rules or parameters for conduct in any activity as long as it is done in an "acceptable" manner. Ethics can also be described as a set of principles prescribing a behavioral code that explains what is good and right or bad and wrong. Even though society is in an ever-changing state, this definition implies that universal principles remain intact. An entrepreneur faces many conflicts for many reasons. One conflict arises as a business is faced with outside as well as inside interests. Some examples are stockholders, the community, the government, employees, and unions. Also, as society changes, the values and mores of society must change.
- 93. One dilemma that entrepreneurs face is managerial rationalization. Managers may use rationalizations to justify questionable conduct. Examples include believing that the activity is not "really" illegal or immoral, the act is in the company's best interest, the behavior will not be found out, and the company will condone the act. The questionable act may seem alright to the manager using these rationalizations, yet it is against the laws of the business world and society.

Another dilemma concerns the matter of morality. Using LaRue Hosmer's conclusions concerning legal requirements and moral judgments, the requirements might overlap but not duplicate the moral standards of society. First, this results from laws not having any moral content, laws being morally unjust, and moral standards having no legal basis. Second, legal requirements tend to be negative, whereas morality tends to be positive. Third, legal requirements can lag behind the acceptable moral standards of society.

Another dilemma that entrepreneurs are often faced with concerns economic trade-offs. Economic trade-offs occur when innovations, risk taking, or venture creation are used to stimulate the economic system to create new jobs and new growth. These qualities produce the trade-off between economic and social welfare. Some examples are advertising for cigarettes with death as a possible result; toxic waste dumps invading lakes, streams, and eventually drinking water; minorities being laid off only because they were the last to be hired; and capital gains realized through the advance information of mergers.

94. The entrepreneur needs to establish a strategy for ethical responsibility within the free enterprise system. To do this, he or she must focus on an ethical position or on an organizational characteristic and analyze it. A strategy for ethical responsibility should have three major elements: ethical consciousness, ethical process and structure, and institutionalization.

Ethical consciousness is the development of an open exchange of processes within the venture, establishing codes of ethics for the company, and setting examples by the entrepreneur. The entrepreneur must accomplish this so that his or her vision can stay intact.

To keep the ethical goals designed to avoid ambiguity and to position statements or codes, the entrepreneur must have an ethical process and structure. For example, affidavits can be used to ensure the willingness of employees to adhere to the venture's specific goals.

Institutionalization is a means to combine the ethical objectives of the entrepreneur with the economic objectives of the venture. Even so, there are times when policies or operations that infringe on ethical values may need to be adjusted, thus testing the entrepreneur's commitment to his or her values. By using feedback and reviewing procedures, institutionalized ethical responsibility can be achieved.

95. Members of society make moral standards based upon the information that is available to them. If the public is misinformed or not informed at all, the judgments they create will not be based on the truth. Therefore, it is not possible for society to make personal moral standards to influence or to establish laws if relevant information is missing.

People of society assemble into small groups with similar norms, beliefs, and values. Within these groups, they formulate

| Name | Class | Dat |
|------|-------|-----|
| | • | ۵. |
| | • | ℧. |

standards that are similar among all the members and act from motives instead of morality. The problem lies in the fact that the personal moral standards that should influence the laws are replaced with the standards of the small group. Just as there are problems with the moral standards of the smaller groups, there are problems with the misrepresentation of moral standards of larger groups. As large organizations share the same norms, beliefs, and values, the individuals and groups within the organization do not share equal weight and influence with regard to the consensus. An example of this would include hospitals where the norms, beliefs, and values of the doctors and staff set the majority of the visible standards. Looking at the larger picture, not all organizations have equal influence or equal influence weighted by size to determine the law. This is another example of misrepresentation of moral standards. The meaning and application of some laws need to be clarified. Under the condition of product liability and equal employment issues, incomplete or imprecise legal requirements must be supplemented by judicial court decisions or by administrative agency actions. As a result of this, personal moral standards cannot influence the laws directly, if at all, in two of the means of formulating the law.

- 96. Characteristics that are important to one individual may not be the same characteristics that are important to another. One characteristic that undoubtedly is important to all is the drive to achieve.
- 97. The entrepreneurial profile has its destructive side. First, the need for control can become an obsession. The need for control can cause problems in networking and in an entrepreneurial team. A sense of distrust can cause the entrepreneur to lose sight of reality or focus on trivial things. An entrepreneur's desire for success can also be destructive if the individual becomes more important than the venture itself. The last "dark side" trait is external optimism. When the entrepreneur takes optimism to the extreme, he or she may begin using a fantasy approach to the business. Trends, facts, and reports are ignored because the entrepreneur thinks everything will turn out fine.
