

1. Both parties gain in a voluntary exchange.

- a. True
- b. False

ANSWER: True

POINTS: 1

DIFFICULTY: Easy

LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and o - DISC: Scarcity, tradeoffs, and opportunity cost

NATIONAL STANDARDS: United States - BPROG: Analytic

ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics

TOPICS: DISC: Gains from trade, specialization and trade

KEYWORDS: BLOOM'S: Knowledge

2. Even though international trade in undertaken voluntarily, a country that engages in trade may not benefit from it.

- a. True
- b. False

ANSWER: False

POINTS: 1

DIFFICULTY: Easy

LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and o - DISC: Scarcity, tradeoffs, and opportunity cost

NATIONAL STANDARDS: United States - BPROG: Analytic

ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics

TOPICS: DISC: Gains from trade, specialization and trade

KEYWORDS: BLOOM's: Knowledge

3. In international trade, one country's gain is another country's loss.

- a. True
- b. False

ANSWER: False

POINTS: 1

DIFFICULTY: Easy

LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and o - DISC: Scarcity, tradeoffs, and opportunity cost

NATIONAL STANDARDS: United States - BPROG: Analytic

ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics

TOPICS: DISC: Gains from trade, specialization and trade

KEYWORDS: BLOOM'S: Comprehension

4. It is impossible for both nations to gain when trading with one other.

- a. True
- b. False

ANSWER: False
POINTS: 1
DIFFICULTY: Easy
LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and o - DISC: Scarcity, tradeoffs, and opportunity cost
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics
TOPICS: DISC: Gains from trade, specialization and trade
KEYWORDS: BLOOM'S: Comprehension

5. In economics the true cost of making a choice is the value of what must be given up.

- a. True
- b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Easy
LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and o - DISC: Scarcity, tradeoffs, and opportunity cost
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics
TOPICS: DISC: Gains from trade, specialization and trade
KEYWORDS: BLOOM'S: Comprehension

6. Opportunity cost is the value of the next best alternative to a given choice.

- a. True
- b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Easy
LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and o - DISC: Scarcity, tradeoffs, and opportunity cost
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics
TOPICS: DISC: Scarcity, tradeoffs, and opportunity cost
KEYWORDS: BLOOM'S: Comprehension

7. Opportunity cost is the highest possible price you can receive when you sell an object.

- a. True
- b. False

ANSWER: False

POINTS: 1
DIFFICULTY: Moderate
LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and o - DISC: Scarcity, tradeoffs, and opportunity cost
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics
TOPICS: DISC: Scarcity, tradeoffs, and opportunity cost
KEYWORDS: BLOOM'S: Comprehension

8. As a student, one of the costs of sleeping in rather than going to class is likely to be a lower grade in the class.

a. True

b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Moderate
LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and o - DISC: Scarcity, tradeoffs, and opportunity cost
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics
TOPICS: DISC: Scarcity, tradeoffs, and opportunity cost
KEYWORDS: BLOOM'S: Comprehension

9. In her calculation of the cost of going to college, an economist would include the amount of forgone earnings over the years spent at college.

a. True

b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Moderate
LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and o - DISC: Scarcity, tradeoffs, and opportunity cost
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics
TOPICS: Ideas for Beyond the Final Exam
KEYWORDS: BLOOM'S: Comprehension

10. Government controls over market prices frequently "backfire."

a. True

b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Easy

LEARNING OBJECTIVES: DISC: Scarcity, tradeoffs, and opportunity cost
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and definitions of economics
TOPICS: DISC: Scarcity, tradeoffs, and opportunity cost
KEYWORDS: BLOOM'S: Comprehension

11. There are never any adverse consequences of government attempts to modify the laws of supply and demand.
- a. True
 - b. False

ANSWER: False
POINTS: 1
DIFFICULTY: Easy
LEARNING OBJECTIVES: Ideas for Beyond the Final Exam
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and definitions of economics
TOPICS: DISC: Monetary and fiscal policy
KEYWORDS: BLOOM'S: Comprehension

12. Comparative advantage explains how two nations can benefit from trade.
- a. True
 - b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Moderate
LEARNING OBJECTIVES: Ideas for Beyond the Final Exam
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and definitions of economics
TOPICS: DISC: Gains from trade, specialization and trade
KEYWORDS: BLOOM'S: Comprehension

13. If Japan is twice as good at producing cameras and three times as good at producing TV sets as the United States, Japan is said to have a comparative advantage in TV sets and the United States has a comparative advantage in cameras.
- a. True
 - b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Difficult
LEARNING OBJECTIVES: Ideas for Beyond the Final Exam
NATIONAL STANDARDS: United States - BPROG: Reflective Thinking - BPROG: Analysis
ACCREDITING STANDARDS: The study of economics, and definitions of economics

TOPICS: DISC: Gains from trade, specialization and trade
KEYWORDS: BLOOM'S: Comprehension

14. The marginal cost of an airline ticket is the total cost of flying the plane divided by the number of passengers.

- a. True
- b. False

ANSWER: False
POINTS: 1
DIFFICULTY: Difficult
LEARNING OBJECTIVES: Ideas for Beyond the Final Exam
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics
TOPICS: DISC: Marginal costs & benefits
KEYWORDS: BLOOM'S: Comprehension

15. Marginal analysis involves looking at the extra costs involved in a decision.

- a. True
- b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Easy
LEARNING OBJECTIVES: Ideas for Beyond the Final Exam
NATIONAL STANDARDS: United States - Analytic - BB-Legal
ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics
TOPICS: DISC: Marginal costs & benefits
KEYWORDS: BLOOM'S: Comprehension

16. There are frequently market solutions that the government can use to deal with externalities.

- a. True
- b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Moderate
LEARNING OBJECTIVES: Ideas for Beyond the Final Exam
NATIONAL STANDARDS: United States - BPROG: Analytic
ACCREDITING STANDARDS: The study of economics, and defi - The study of economics, and definitions of economics
TOPICS: DISC: Markets, market failure, and externalities
KEYWORDS: BLOOM'S: Comprehension

17. Externalities are social costs that affect parties external to a particular economic transaction.

- a. True

b. False

ANSWER: True
POINTS: 1
DIFFICULTY: Moderate
LEARNING OBJECTIVES: Ideas for Beyond the Final Exam

KEYWORDS: BLOOM'S: Comprehension

126. In Egypt, in 1970, the Aswan Dam was completed. By preventing the annual flood of the Nile (thereby providing millions of acres of arable land) and by providing electricity, the dam was expected to raise the living standard of the Egyptian people-and it has. However, it has also led to a rise in the water table which causes Egypt's limestone structures, including the pyramids, to absorb more salt water and to suffer serious erosion from crystallized salts. Combined with air pollution and traffic vibration, this erosion is turning the pyramids to dust. Economists analyze this type of problem with the concept of

- a. an externality.
- b. the antiquity problem.
- c. a free-rider problem.
- d. the public good problem.
- e. the trade-off between equity and output.

207. Carefully define the following terms, and explain their importance in economics.

- a. opportunity cost
- b. abstraction
- c. theory
- d. model
- e. marginal analysis

ANSWER:

- a. Opportunity cost for a decision is the value of the next best alternative which one has to give up because of that decision. It is central to rational thinking and economic analysis.
- b. Abstraction is ignoring many details in order to focus on the most important elements of a problem. The appropriate degree of abstraction depends on the topic under consideration.
- c. Theory is a deliberate simplification of relationships with the purpose of explaining how those relationships work. Theory is cause-and-effect reasoning.
- d. A model is a simplified, small-scale version of some aspect of the economy. Much economic analysis employs models of one or more parts of the economy.
- e. Marginal analysis is making decisions based on a comparison of the increase or change in benefits to the increase or change in costs when making some sort of change.

208. How does correlation differ from causation? Give an example of each to illustrate your answer.

ANSWER:

Correlation means that two (or more) variables change in a systematic fashion. Economic examples include large cash withdrawals from banks at the end of the month, which coincide with payday and the due dates of bills. (The end of the month does not cause withdrawals.) Causation means that two (or more) variables are related so that a change in one actually causes a change in the other. Economic examples include a change in price leading to a change in the amount of an object which people wish to buy. (Non-economic examples can be used as well.)

209. How do markets respond to price ceilings and price floors? Do attempts to repeal the laws of supply and demand meet their objectives?

ANSWER: Attempts to repeal the laws of supply and demand usually backfire and sometimes produce results virtually the opposite of those intended. Where rent controls are adopted to protect tenants, housing grows scarce because the law makes it unprofitable to build and maintain apartments. When price floors are placed under agricultural products, surpluses pile up because people buy less.

210. Economists often say that trade is a win-win situation. How do you justify this?

ANSWER: One of the fundamental ideas of economics is that both the parties must expect to gain something in voluntary exchange. Laws sometimes prohibit mutually beneficial exchanges between buyers and sellers—as when the resale of tickets to sporting events is outlawed even though the buyer is happy to get the ticket that he could not obtain at a lower price. In such instances, misguided reasoning blocks the mutual gains that arise from voluntary exchange. No one will voluntarily agree for a trade if they do not expect any benefit from it. So trade is a win-win situation since both parties are going to gain from it.

211. What are the tools available to governments to mitigate cycles of boom and bust? Why do these tools fail?

ANSWER: Some of the tools available to the government constitute what is called fiscal policy: control over taxes and government spending. Others come from monetary policy: control over money and interest rates. Fiscal and monetary policies sometimes fail—for both political and economic reasons. Policymakers do not always make the right decisions. And even when they do, the economy does not always react as expected. Furthermore, it is not always clear what the "right" decision is.

212. Why might well-educated economists disagree on appropriate public policy in some situations?

ANSWER: Economists might disagree because of imperfect information, different theories on relevant cause-effect relationships, and because of their different values.

214. How is a production indifference map helpful?

ANSWER: A production indifference map is a graph whose axes show the quantities of two inputs that are used to produce some output. A curve in the graph corresponds to some given quantity of that output, and the different points on that curve show the different quantities of the two inputs that are enough to produce the given output.

215. Why do economists abstract, and is it appropriate?

ANSWER: Economists (and other scientists) abstract in order to be able to focus on key variables. It is appropriate, because the economy is very complex; trying to keep track of everything is extremely difficult. Thus, economists focus on relevant variables and ignore those that are less relevant to the problem at hand. Abstraction allows focus on the forest instead of the trees.

216. Carefully distinguish between an economic theory and economic model.

ANSWER: An economic theory is a deliberate simplification or abstraction of factual relationships that attempts to explain how those relationships work. It is an explanation of the mechanism behind observed phenomena. An economic model is a representation of a theory or a part of a theory used to gain insight into cause and effect. A theory can give rise to a large number of models. Thus, a theory is logically prior to a model, and will ordinarily be more inclusive than a model.

217. What is the role of value judgments in economic analysis?

ANSWER: Economists employ value judgments in making policy statements, because of differences in goals or political persuasion. Liberal and conservative economists will look at the economy differently, and see different problems with different solutions. It is important to note that value judgments do not generally interfere with most economic analysis, as there are many areas of agreement among economists.

219. It has been said that "economics is the science of common sense." Is economics synonymous with common sense?

ANSWER: A large portion of economics will agree with common sense, such as higher prices leading to a cutback in purchases or more government spending creating jobs. But economic logic provides findings that may conflict with a non-economist's common sense, such as tariffs and quotas costing, rather than creating, jobs. Economics may be the science of common sense, but that common sense must include a logical way of thinking.

220. Harry Truman is credited with the statement, "Give me a one-armed economist," because economists are likely to say, "On the one hand, . . . on the other hand." Why do economists "waffle" more than physicists or chemists?

ANSWER: Economists describe human behavior, which cannot be predicted as accurately as physical or chemical reactions. Waffling can be found at the frontiers of all sciences, but the media pay more attention to economic debates, such as the effect of supply-side tax cuts on tax revenues, than to the debates of physicists (are quarks the smallest particle of matter?) or chemists. Value judgments also play a larger role in economic debates, since economics often deals with matters that directly affect the welfare of large numbers of people.

221. In the early 1800s, there was a smallpox outbreak in a remote part of Russia. The government sent in a large group of army doctors, but they were too late to stop the epidemic. Thirty years later, there was another smallpox scare. A local

statistician cautioned the government against a similar response, noting the increased mortality and high number of army doctors during the earlier epidemic. Was the statistician providing good advice?

ANSWER: The statistician confused correlation with causation. The doctors were not the cause of the smallpox deaths. If the statistician were correct, then we should get rid of hospitals, since so many people die there. One cannot conclude that the army doctors could have helped thirty years later; this would require additional data comparing smallpox deaths with and without medical assistance.

222. A student was heard to remark, "Even though I am certain to fail this course, I cannot withdraw from it since it is too late to get back my tuition." Use one or more "Ideas for Beyond the Final Exam" to analyze this reasoning.

ANSWER: The student is failing to use marginal analysis. Tuition is paid and gone whether or not she withdraws from the course. If getting an F requires retaking the course, it will still be necessary to pay tuition again. One could also note that the student is disregarding an important component of opportunity cost. An F on a transcript is more detrimental than a W.

223. A large airline calculates that the additional cost of a having a passenger on a flight to the Bahamas as the cost of a bag of peanuts and a soft drink, which totals \$1.50, but the airline's price is \$600 for potential customers who want to buy vacant seats on the day of the flight. Which economic principle is this airline failing to utilize?

ANSWER: The airline is failing to think at the margin. If the cost of having another passenger on the flight is only \$1.50, then the airline could charge a price well below \$600 in order to encourage people to buy vacant seats, and for each seat sold, the airline would make additional profits.

224. In the United States the distribution of income is relatively unequal, and output is relatively high, while in the former Soviet Union the distribution of income was more equal and output per worker was much lower. Give one possible explanation for this phenomenon.

ANSWER: This problem illustrates the trade-off between efficiency and equality. Workers in the Soviet Union were guaranteed jobs and decent wages regardless of their work effort, and thus they had less incentive to reach higher levels of productivity. In the United States, generally speaking, workers receive greater rewards for greater effort, and thus output per workers tends to be higher.

225. It has been found that people die at a much higher rate in hospitals than in most other environments, leading some to conclude that hospitals cause death. What is the problem with this reasoning?

ANSWER: This illustrates a confusion of correlation with causation. The fact that mortality rates are higher in hospitals than in other environments reflects the fact that hospital patients are more likely to be ill, not that hospitals cause death.

226. Explain why an airline may decide to sell an air ticket to a stand-by passenger at less than the full-fare if there are empty seats on the airplane?

ANSWER: The decision depends on the marginal, or extra, cost of selling that person a ticket. Marginal cost will include such things as the cost of writing and processing the ticket, the food and beverages the person will consume, and the extra fuel that will be needed. If those costs are less than the cost of a full-fare ticket then it will be profitable for the airline to charge the stand-by passenger a price that is greater than or equal to the sum of the marginal costs.

227. How does the United States differ from the European Union in how it balances the competing claims of equality and efficiency?

ANSWER:

The United States has chosen greater efficiency at the expense of greater equality. In the United States, wages have been allowed to fall and labor markets have been allowed to operate relatively free of government intervention. The result has been lower wages, fewer benefits for workers and a larger gap between the rich and the poor. What has been gained is lower unemployment. The EU has emphasized greater equality rather than greater efficiency. Wages have not been allowed to fall due to minimum wage laws and the government has protected worker's benefits through generous social welfare programs. The gap between the rich and the poor has not increased but it has been at the expense of higher unemployment.

228. Many believe that fairness calls for higher income taxes on the wealthy. Using one of the "Ideas for Beyond the Final Exam," explain how higher taxes on the wealthy will affect output.

ANSWER:

Greater equality comes at the expense of reduced output. The reversal of Ronald Reagan's tax cuts will diminish the incentive of the wealthy to earn taxable income. They will work fewer hours or less hard, or they will accept nonwage benefits such as country club memberships, find more tax loopholes, or even seek illegal channels to reduce their tax liability.

229. Carefully define the following terms and explain their importance.

- a. variable
- b. ray
- c. slope
- d. contour map

ANSWER:

- A variable is an object, such as price, whose magnitude is measured by a number.
- a. It is used to analyze what happens to other things when the size of that number changes.
 - b. A ray is a straight line emanating from a particular point and extending endlessly in one direction.
 - c. The slope of a line is change per unit from left to right. It is measured by the

change in the variable on the vertical axis divided by the change in the variable on the horizontal axis.

- d. A contour map shows all points representing different combinations of two variables, e.g., combinations of labor and raw materials capable of producing a given output. (Other examples of contour maps could be drawn from later chapters.)

230. If you leave your money in the bank at a fixed interest rate and allow for compounding of interest, show what will happen to your savings over time. Indicate with a graph whether there is a negative or positive slope between savings and time and what happens to the slope over time.

ANSWER: **Figure 1-3**

Placing time on the horizontal axis (the independent variable) and savings on the vertical axis (the dependent variable), savings will increase at an increasing rate (Figure 1-2). Slope is positive, and increasing. For example, \$100 saved at 5 percent interest will yield \$105 at the end of one year. At the end of the second year, one has $\$105 + \$105(.05) = \$110.25$. Savings increases by \$5.25 in year 2, a greater increase than the \$5 increase in year 1.

231. Dryden Press can produce 10,000 textbooks using 10 machines and 100 workers or using five machines and 300 workers. It can produce 20,000 textbooks using 10 machines and 300 workers or five machines and 600 workers.

Construct a two-dimensional contour-type graph to show the relationship between the output of textbooks and the labor and machinery inputs.

ANSWER:

Figure 1-4

The labor and capital inputs are measured along the X and Y axes; it does not matter which input goes on which axis (Figure 1-3). The first contour line is at an output level of 10,000 and contains a line connecting two points: $K = 10$ and $L = 100$, and $K = 5$ and $L = 300$. The higher output level for $Q = 20,000$ is a higher contour line to the right of $Q = 10,000$, again containing two points. The second line connects $K = 10$ and $L = 300$ with $K = 5$ and $L = 600$.

232. Explain the following statement: "Good decisions typically require marginal analysis, which weighs added costs against added benefits."

ANSWER:

A marginal analysis of an economic decision requires considering the marginal costs of taking the proposed action against the benefits of taking the action. A good example is the case of an airlines which is considering whether to sell empty seats at a reduced price. Can or should they do so? To make that determination, the airline must consider the cost of having additional passengers fly, such as food and beverage costs, the costs of writing additional tickets. Most other costs must be paid whether the plane contains 20 passengers or 120. In this case, it makes sense to sell tickets at a reduced price, and have those additional revenues contribute to the company's profit. If the company refuses to sell tickets at a reduced price, and some seats remain empty, the company will pass up the opportunity to generate more income at a very small marginal cost. The decision to earn extra income at a slight cost would be a good economic decision.
