

Management, 14e, Global Edition (Robbins/Coulter)
Chapter 2 Decision Making

- 1) A problem can best be described as _____.
A) a change from the past
B) something bad that has happened
C) a difference between current conditions and some desired state
D) a loss of something of value

Answer: C

25) In the decision-making process, after allocating weights to the decision criteria, the decision maker lists viable alternatives that could resolve the problem.

Answer: TRUE

Diff: 1

AACSB: Reflective thinking

Learning Obj: LO 2.1: Describe the eight steps in the decision-making process

Classification: Concept

26) Once the alternatives to solving a problem have been identified, the next step in the decision-making process is selecting one of these alternatives.

Answer: FALSE

Diff: 2

AACSB: Reflective thinking

Learning Obj: LO 2.1: Describe the eight steps in the decision-making process

Classification: Concept

27) Implementing an alternative refers to the process of choosing the best alternative.

Answer: FALSE

Diff: 2

AACSB: Reflective thinking

Learning Obj: LO 2.1: Describe the eight steps in the decision-making process

Classification: Concept

28) List and discuss the eight steps in the decision-making process.

Answer:

1. Identify a problem - The decision-making process begins with the existence of a problem or a discrepancy between an existing and a desired state of affairs. However, a discrepancy without pressure to take action becomes a problem that can be postponed.
2. Identify decision criteria - Once the manager has identified a problem that needs attention, the decision criteria important to resolving the problem must be identified. That is, managers must determine what is relevant in making a decision.
3. Allocate weights to the criteria - The decision maker must weigh the items in order to give them the correct priority in the decision. A simple approach to doing this is to give the most important criterion a weight of 10 and then assign weights to the rest against that standard.
4. Develop alternatives - The fourth step requires the decision maker to list the viable alternatives that could resolve the problem. No attempt is made in this step to evaluate the alternatives, only to list them.
5. Analyze alternatives - Once the alternatives have been identified, the decision maker must critically analyze each one. From this comparison, the strengths and weaknesses of each alternative become evident.
6. Select an alternative - The sixth step involves choosing the best alternative from among those considered.
7. Implement the alternative - Implementation involves conveying the decision to those affected by it and getting their commitment to it. If the people who must carry out a decision participate in the process, they are more likely to enthusiastically support the outcome than if they are just told what to do.
8. Evaluate decision effectiveness - The last step in the decision-making process involves appraising the outcome of the decision to see if the problem has been resolved. If the desired result has not been achieved, the manager may consider returning to a previous step or may even consider starting the whole decision process over.

Learning Obj: LO 2.2: Explain the four ways managers make decisions

Classification: Concept

49) Intuitive decision making complements rational decision making but not bounded rational decision making.

Answer: FALSE

Diff: 2

AACSB: Reflective thinking

Learning Obj: LO 2.2: Explain the four ways managers make decisions

Classification: Concept

50) Briefly, discuss the assumptions of rationality and the validity of those assumptions.

Answer: A decision maker who is perfectly rational is fully objective and logical. The problem faced is clear and unambiguous. The decision maker has a clear and specific goal. He is aware of all possible alternatives and consequences. Making decisions consistently leads to selecting the alternative that maximizes the likelihood of achieving that goal.

These assumptions apply to any decision-personal or managerial. For managerial decision making, an additional assumption is that decisions are made in the best interests of the organization. However, most of these assumptions of rationality are not very realistic.

Diff: 3

AACSB: Reflective thinking; Written and oral communication

Learning Obj: LO 2.2: Explain the four ways managers make decisions

Classification: Concept

51) What is meant by bounded rationality and satisficing?

Answer: Despite the unrealistic assumptions of perfect rationality, managers are expected to be rational when making decisions. It is understood that "good" decision makers are supposed to do certain things and exhibit good decision-making behaviors as they identify problems, consider alternatives, gather information, and act decisively but prudently. When they do so, they show others that they are competent and that their decisions are the result of intelligent deliberation. However, a more realistic approach to describing how managers make decisions is the concept of "bounded rationality." According to this concept, managers make decisions rationally, but are limited by their ability to process information.

Because they cannot possibly analyze all information on all alternatives, managers "satisfice," rather than maximize. That is, they accept solutions that are "good enough." Thus, they become rational within the limits of their ability to process information.

Diff: 3

AACSB: Reflective thinking; Written and oral communication

Learning Obj: LO 2.2: Explain the four ways managers make decisions

Classification: Concept

52) Give an example of the use of bounded rationality. The example can be fictitious as long as it includes all the elements of bounded rationality.

Answer: Students answers will vary, but must include an expectation of rationality, a limited ability to process information, an inability to know all possible alternatives, and a probable lack of maximization of the results of the decision

Diff: 3

AACSB: Application of knowledge; Written and oral communication

Learning Obj: LO 2.2: Explain the four ways managers make decisions

Classification: Synthesis

53) What is intuitive decision making? How does intuition affect the process of making a decision?

Answer: Intuitive decision making is the process of making decisions on the basis of experience, feelings, and accumulated judgment. Intuitive decision making can complement both rational and bounded rational decision making. A manager who has had experience with a similar type of problem or situation often acts quickly with limited information because of that past experience. Managers who experienced intense feelings and emotions when making decisions actually achieved higher decision-making performance, especially when they understood their feelings as they were making decisions.

Diff: 3

AACSB: Reflective thinking; Written and oral communication

Learning Obj: LO 2.2: Explain the four ways managers make decisions

Classification: Concept

54) Give an example of evidence-based management. Remember to include all of the essential elements.

Answer: Students answers will vary but must include 1) the decision-maker's expertise and judgment; 2) external evidence that has been evaluated by the decision maker; 3) opinions, preferences, and values of those who have a stake in the decision; and 4) relevant organizational (internal) factors such as context, circumstances, and organizational members.

AACSB: Reflective thinking

Learning Obj: LO 2.3: Classify decisions and decision-making conditions

Classification: Concept

90) Discuss structured problems, programmed decisions, unstructured problems, and nonprogrammed decisions.

Answer: Some problems are straightforward. The decision maker's goal is clear, the problem is familiar, and information about the problem is easily defined and complete. Hence, these are called structured problems. For instance, when a server spills a drink on a customer's coat the customer is upset and the manager needs to do something. Because it is not an unusual occurrence, there is some standardized routine for handling it. For example, the manager offers to have the coat cleaned at the restaurant's expense. This is called a programmed decision, a repetitive decision that can be handled by a routine approach. Because the problem is structured, the manager does not have to go to the trouble and expense of going through an involved decision process.

Not all the problems managers face can be solved using programmed decisions. Many organizational situations involve unstructured problems, which are problems that are new or unusual and for which information is ambiguous or incomplete. Whether to build a new manufacturing facility in China is an example of an unstructured problem. When problems are unstructured, managers rely on nonprogrammed decision making in order to develop unique solutions. Nonprogrammed decisions are unique and nonrecurring and involve custom-made solutions. Lower-level managers mostly rely on programmed decisions because they confront familiar and repetitive problems. As managers move up the organizational hierarchy, the problems they confront become more unstructured. However, few managerial decisions in the real world are either fully programmed or nonprogrammed. Most fall somewhere in between.

Classification: Concept

91) Discuss the three types of programmed decisions that a manager depends on to resolve structured problems.

Answer: Usually a manager relies on one of three types of programmed decisions to counter structured problems: procedure, rule, or policy.

A procedure is a series of sequential steps a manager uses to respond to a structured problem. Identifying the problem is a bit difficult. Once it is clear, so is the procedure. For instance, a purchasing manager receives a request from a warehouse manager for 15 PDA handhelds for the inventory clerks. The purchasing manager knows how to make this decision by following the established purchasing procedure.

A rule is an explicit statement that tells a manager what can or cannot be done. Rules are frequently used because they are simple to follow and ensure consistency. For example, rules about lateness and absenteeism permit supervisors to make disciplinary decisions rapidly and fairly.

The third type of programmed decisions is a policy, which is a guideline for making a decision. In contrast to a rule, a policy establishes general parameters for the decision maker rather than specifically stating what should or should not be done. Policies typically contain an ambiguous term that leaves interpretation up to the decision maker.

Learning Obj: LO 2.3: Classify decisions and decision-making conditions

Classification: Concept

92) Discuss the three different decision-making conditions that managers usually face.

Answer: When making decisions, managers usually face three different conditions: certainty, risk, and uncertainty.

a. Certainty - The ideal situation for making decisions is one of certainty, which is a situation where a manager can make accurate decisions because the outcome of every alternative is known.

b. Risk - These are conditions in which the decision maker is able to estimate the likelihood of certain outcomes. Under risk, managers have historical data from past personal experiences or secondary information that lets them assign probabilities to different alternatives.

c. Uncertainty - This is a situation in which a decision maker has neither certainty nor reasonable probability estimates available. Under these conditions, the choice of alternative is influenced by the limited amount of available information and by the psychological orientation of the decision maker. An optimistic manager follows a maximax choice (maximizing the maximum possible payoff); a pessimist follows a maximin choice (maximizing the minimum possible payoff); and a manager who desires to minimize his maximum "regret" opts for a minimax choice.

115) Explain any five decision biases or errors that managers make.

Answer: *Overconfidence bias*: When decision makers tend to think they know more than they do or hold unrealistically positive views of themselves and their performance.

Immediate gratification bias: Decision makers tend to want immediate rewards and to avoid immediate costs.

Anchoring effect occurs when decision makers fixate on initial information as a starting point and then, once set, fail to adequately adjust for subsequent information. First impressions, ideas, prices, and estimates carry unwarranted weight relative to information received later.

Selective perception bias: When decision makers selectively organize and interpret events based on their biased perceptions.

Confirmation bias: Decision makers seek out information that reaffirms their past choices and discount information that contradicts past judgments. These people tend to accept at face value information that confirms their preconceived views and are critical and skeptical of information that challenges these views.

Framing bias: When decision makers select and highlight certain aspects of a situation while excluding others.

Availability bias: When decisions makers tend to remember events that are the most recent and vivid in their memory.

Representation bias: When decision makers assess the likelihood of an event based on how closely it resembles other events or sets of events.

Randomness bias: Decision makers try to create meaning out of random events.

Sunk costs error: When decision makers forget that current choices cannot correct the past.

Self-serving bias: Decision makers take credit for their successes and blame failure on outside factors.

Hindsight bias: The tendency for decision makers to falsely believe that they would have accurately predicted the outcome of an event once that outcome is actually known.
