

## Chapter 02 Testbank

Student: \_\_\_\_\_

1. Which of the following statements is false?
  - i. Qualitative information is not relevant for planning purposes.
  - ii. Production costs are important for planning purposes, but selling and administration costs are not.
  - iii. Information on revenues is not important for planning purposes.

A. i  
B. iii  
C. i and iii  
D. i, ii and iii
2. Which of the following statements is true?

A. The word cost has the same meaning in all situations in which it is used.  
B. Cost data, once classified and recorded, can be used for any purpose.  
C. Different cost concepts and classifications are used for different purposes.  
D. None of the given answers
3. Which of the following statements is true? A cost is:

A. always an expense  
B. always an asset  
C. can be either an expense or an asset  
D. always a liability
4. Variable costs:

A. vary indirectly with changes in activity level  
B. vary directly with changes in activity level  
C. vary on a per unit basis  
D. vary indirectly with changes in activity level AND vary on a per unit basis
5. If production increases, variable cost will:

A. remain constant on a per unit basis  
B. increase by a variable amount  
C. vary on a per unit basis  
D. remain unchanged

6. As activity level decreases, unit variable cost:
- A. increases proportionately with activity
  - B. decreases proportionately with activity
  - C. remains constant
  - D. decreases by a fixed amount
7. As activity level increases, total variable costs:
- A. increase proportionately with activity
  - B. decrease proportionately with activity
  - C. increase by a fixed amount
  - D. decrease by a fixed amount
8. Fixed costs:
- A. vary directly with changes in activity level
  - B. in total remain unchanged as activity levels change
  - C. vary on a per unit basis
  - D. B and C
9. Which of the following is not an example of a variable cost?
- A. Straight-line depreciation on a machine expected to last 5 years.
  - B. Wages paid to assembly line workers at a local manufacturing plant.
  - C. Timber used to make outdoor furniture.
  - D. Commissions paid to sales personnel.
10. Which of the following statements is false?
- A. Costing is common to both conventional and contemporary management accounting.
  - B. Activity-based costing is common to both conventional and contemporary management accounting.
  - C. Performance measurement is common to both conventional and contemporary management accounting.
  - D. Contemporary performance measurement covers a range of critical success factors.
11. Which is the correct order of cost incurrence in the value chain?
- A. R & D, Product Design, Manufacturing, Marketing, Distribution, Customer Support
  - B. R & D, Product Design, Customer Support, Marketing, Distribution, Manufacturing
  - C. R & D, Product Design, Manufacturing, Distribution, Customer Support, Selling
  - D. R & D, Product Design, Manufacturing, Distribution, Marketing, Customer Support

12. Costs that can be traced to a particular cost object are called:

- A. direct costs
- B. indirect costs
- C. product costs
- D. manufacturing costs

13. Indirect costs:

- A. cannot be traced to a particular cost object
- B. cannot be economically traced to a particular cost object
- C. are always variable costs
- D. are always fixed costs

14. Whether a cost is classified as direct or indirect will depend on:

- A. the nature of the cost object
- B. whether the cost can be economically traced to the cost object
- C. whether the organisation is in a manufacturing or service industry
- D. the nature of the cost object AND whether the cost can be economically traced to the cost object

15. Costs that can be significantly influenced by a particular manager are:

- A. product costs.
- B. period costs.
- C. controllable costs.
- D. administrative costs.

16. Which of the following is not an example of a manufacturing overhead?

- A. Assembly line workers' wages
- B. Factory rent
- C. Depreciation of factory machinery
- D. Factory lighting

17. Product costs are:

- A. expended as they are incurred
- B. inventoriable costs
- C. period costs
- D. expended as they are incurred AND inventoriable costs

18. Costs that are expended during the period in which the costs are incurred are called:

- A. product costs
- B. inventoriable costs
- C. period costs
- D. indirect costs

19. Which of the following costs of a manufactured product is a period cost?

- A. Direct material
- B. Manufacturing overhead
- C. Indirect material
- D. Sales commission

20. Which of the following is not a period cost?

- A. Marketing costs
- B. Administrative costs
- C. Research and development
- D. Factory overheads

21. Cost of goods purchased includes the:

- A. purchase cost
- B. transportation inward cost
- C. storage cost
- D. purchase cost AND transportation inward cost

22. Product costs comprise:

- A. direct materials, direct labour and manufacturing overhead
- B. direct materials and manufacturing overhead
- C. direct labour and manufacturing overhead
- D. direct materials and direct labour

23. Refer to the following data.

|                                   |           |
|-----------------------------------|-----------|
| Direct material used              | \$150 000 |
| Selling costs                     | \$5000    |
| Indirect labour                   | \$7000    |
| Administrative costs              | \$10 000  |
| Depreciation on factory equipment | \$70 000  |
| Direct labour                     | \$40 000  |
| Overtime premiums paid            | \$20 000  |
| Indirect materials                | \$45 000  |

The prime costs are:

- A. \$190 000
- B. \$40 000
- C. \$150 000
- D. \$142 000

24. Refer to the following data.

|                                   |           |
|-----------------------------------|-----------|
| Direct material used              | \$150 000 |
| Selling costs                     | \$5000    |
| Indirect labour                   | \$7000    |
| Administrative costs              | \$10 000  |
| Depreciation on factory equipment | \$70 000  |
| Direct labour                     | \$40 000  |
| Overtime premiums paid            | \$20 000  |
| Indirect materials                | \$45 000  |

The conversion costs are:

- A. \$150 000
- B. \$142 000
- C. \$182 000
- D. \$190 000

25. Refer to the following data.

|                                   |           |
|-----------------------------------|-----------|
| Direct material used              | \$150 000 |
| Selling costs                     | \$5000    |
| Indirect labour                   | \$7000    |
| Administrative costs              | \$10 000  |
| Depreciation on factory equipment | \$70 000  |
| Direct labour                     | \$40 000  |
| Overtime premiums paid            | \$20 000  |
| Indirect materials                | \$45 000  |

The product costs are:

- A. \$15 000
- B. \$182 000
- C. \$190 000
- D. \$332 000

26. Refer to the following data.

|                                   |           |
|-----------------------------------|-----------|
| Direct material used              | \$150 000 |
| Selling costs                     | \$5000    |
| Indirect labour                   | \$7000    |
| Administrative costs              | \$10 000  |
| Depreciation on factory equipment | \$70 000  |
| Direct labour                     | \$40 000  |
| Overtime premiums paid            | \$20 000  |
| Indirect materials                | \$45 000  |

The period costs are:

- A. \$15 000
- B. \$20 000
- C. \$190 000
- D. \$372 000

27. Refer to the following data.

|                                   |           |
|-----------------------------------|-----------|
| Direct material used              | \$150 000 |
| Selling costs                     | \$5000    |
| Indirect labour                   | \$7000    |
| Administrative costs              | \$10 000  |
| Depreciation on factory equipment | \$70 000  |
| Direct labour                     | \$40 000  |
| Overtime premiums paid            | \$20 000  |
| Indirect materials                | \$45 000  |

The non-manufacturing costs are:

- A. \$15 000
  - B. \$70 000
  - C. \$182 000
  - D. \$372 000
28. Indirect material, indirect labour and other manufacturing costs that are neither direct labour nor direct material costs are classified as:
- A. manufacturing overhead
  - B. product costs
  - C. prime costs
  - D. manufacturing overhead AND product costs
29. Indirect materials include:
- A. materials that are incorporated into the finished product
  - B. materials required for the production process, which do not become an integral part of the finished product
  - C. direct materials that are so insignificant in cost that it becomes unimportant to trace their costs to specific products
  - D. materials required for the production process, which do not become an integral part of the finished product AND direct materials that are so insignificant in cost that it becomes unimportant to trace their costs to specific products
30. On-costs on direct labour are classified as:
- A. direct labour
  - B. indirect labour
  - C. manufacturing overhead
  - D. either direct labour or indirect labour depending on the decision made by the firm

31. Depreciation of factory equipment would be classified as:

- A. indirect material
- B. indirect labour
- C. manufacturing overhead
- D. a sundry expense

32. Idle time is:

- A. frequently an avoidable cost
- B. classified as overhead
- C. caused by events such as equipment breakdown and new set-ups of production runs
- D. All of the given answers

33. Unless overtime and idle time are caused by a particular job, they are treated as:

- A. a part of direct labour expense
- B. a part of manufacturing overhead
- C. associated with a particular product
- D. a part of manufacturing overhead AND associated with a particular product

34. The flow of manufacturing costs through the system is:

- A. raw materials inventory; work in process inventory; finished goods inventory; cost of goods sold
- B. raw materials inventory; work in process inventory; cost of goods sold; finished goods inventory
- C. work in process inventory; raw materials inventory; finished goods inventory; cost of goods sold
- D. raw materials inventory; finished goods inventory; work in process inventory; cost of goods sold

35. The Casual Furniture Company manufactures outdoor furniture and incurred the following costs during the month of January.

|                                     |               |
|-------------------------------------|---------------|
| Timber                              | \$25 000      |
| Paint                               | \$5000        |
| Glue                                | \$500         |
| Wages—assembly personnel            | \$20 000      |
| Wages—factory supervisor            | \$3500        |
| Factory cleaner's wages             | \$2000        |
| Sales commissions                   | \$10 000      |
| Administrative staff salaries       | \$4000        |
| Depreciation—factory equipment      | \$3000        |
| Depreciation—sales office equipment | \$1000        |
| Utilities, insurance—factory        | \$6000        |
| Utilities, insurance—sales office   | \$2000        |
| Advertising                         | <u>\$8000</u> |
| Total costs                         | \$90 000      |

The product costs are:

- A. \$90 000
- B. \$83 000
- C. \$65 000
- D. \$63 000

36. The Casual Furniture Company manufactures outdoor furniture and incurred the following costs during the month of January.

|                                     |               |
|-------------------------------------|---------------|
| Timber                              | \$25 000      |
| Paint                               | \$5000        |
| Glue                                | \$500         |
| Wages—assembly personnel            | \$20 000      |
| Wages—factory supervisor            | \$3500        |
| Factory cleaner's wages             | \$2000        |
| Sales commissions                   | \$10 000      |
| Administrative staff salaries       | \$4000        |
| Depreciation—factory equipment      | \$3000        |
| Depreciation—sales office equipment | \$1000        |
| Utilities, insurance—factory        | \$6000        |
| Utilities, insurance—sales office   | \$2000        |
| Advertising                         | <u>\$8000</u> |
| Total costs                         | \$90 000      |

The period costs are:

- A. \$0
- B. \$7 000
- C. \$25 000
- D. \$30 500

37. The Casual Furniture Company manufactures outdoor furniture and incurred the following costs during the month of January.

|                                     |               |
|-------------------------------------|---------------|
| Timber                              | \$25 000      |
| Paint                               | \$5000        |
| Glue                                | \$500         |
| Wages—assembly personnel            | \$20 000      |
| Wages—factory supervisor            | \$3500        |
| Factory cleaner's wages             | \$2000        |
| Sales commissions                   | \$10 000      |
| Administrative staff salaries       | \$4000        |
| Depreciation—factory equipment      | \$3000        |
| Depreciation—sales office equipment | \$1000        |
| Utilities, insurance—factory        | \$6000        |
| Utilities, insurance—sales office   | \$2000        |
| Advertising                         | <u>\$8000</u> |
| Total costs                         | \$90 000      |

The prime costs are:

- A. \$30 000
- B. \$50 000
- C. \$65 000
- D. \$50 500

38. The Casual Furniture Company manufactures outdoor furniture and incurred the following costs during the month of January.

|                                     |               |
|-------------------------------------|---------------|
| Timber                              | \$25 000      |
| Paint                               | \$5000        |
| Glue                                | \$500         |
| Wages—assembly personnel            | \$20 000      |
| Wages—factory supervisor            | \$3500        |
| Factory cleaner's wages             | \$2000        |
| Sales commissions                   | \$10 000      |
| Administrative staff salaries       | \$4000        |
| Depreciation—factory equipment      | \$3000        |
| Depreciation—sales office equipment | \$1000        |
| Utilities, insurance—factory        | \$6000        |
| Utilities, insurance—sales office   | \$2000        |
| Advertising                         | <u>\$8000</u> |
| Total costs                         | \$90 000      |

The conversion costs are:

- A. \$34 500
- B. \$29 500
- C. \$20 000
- D. \$35 000

39. The Casual Furniture Company manufactures outdoor furniture and incurred the following costs during the month of January.

|                                     |               |
|-------------------------------------|---------------|
| Timber                              | \$25 000      |
| Paint                               | \$5000        |
| Glue                                | \$500         |
| Wages—assembly personnel            | \$20 000      |
| Wages—factory supervisor            | \$3500        |
| Factory cleaner's wages             | \$2000        |
| Sales commissions                   | \$10 000      |
| Administrative staff salaries       | \$4000        |
| Depreciation—factory equipment      | \$3000        |
| Depreciation—sales office equipment | \$1000        |
| Utilities, insurance—factory        | \$6000        |
| Utilities, insurance—sales office   | \$2000        |
| Advertising                         | <u>\$8000</u> |
| Total costs                         | \$90 000      |

The manufacturing overhead is:

- A. \$14 500
  - B. \$15 000
  - C. \$9500
  - D. \$9 000
40. In the manufacturing firm, inventories consist of:
- A. raw materials, cost of goods manufactured during the period and finished goods
  - B. raw materials, work in process and finished goods
  - C. raw materials, finished goods and cost of goods sold
  - D. cost of goods manufactured and cost of goods sold

41. To calculate the cost of goods sold during the period, you would use which of the following equations?
- A. Beginning finished goods + cost of goods manufactured + ending finished goods
  - B. Ending finished goods + cost of goods manufactured – beginning finished goods
  - C. Beginning finished goods + cost of goods manufactured – ending finished goods
  - D. Beginning finished goods + ending finished goods – cost of goods manufactured
42. Work in process inventories are composed of:
- A. direct materials
  - B. direct labour
  - C. manufacturing overhead
  - D. All of the given answers
43. Barrett Industries began the month of June with a finished goods inventory of \$15 000. The finished goods inventory at the end of June was \$10 000 and the cost of goods sold during the month was \$20 000. The cost of goods manufactured during the month of June was:
- A. \$15 000
  - B. \$25 000
  - C. \$20 000
  - D. \$5000
44. Fairchild Pty Ltd began April with a finished goods inventory of \$25 000. The cost of goods manufactured during the month was \$40 000 and the cost of goods sold during April was \$50 000. The inventory remaining in finished goods at the end of April was:
- A. \$35 000
  - B. \$25 000
  - C. \$20 000
  - D. \$15 000
45. Barrister and Company began July with a finished goods inventory of \$10 000. The cost of goods manufactured during the month was \$85 000 and the ending finished goods inventory was \$20 000. The cost of goods sold during July was:
- A. \$55 000
  - B. \$75 000
  - C. \$95 000
  - D. \$105 000

46. Lenco Industries has cost of goods manufactured of \$65 000 in May. The finished goods inventory at the end of May was \$20 000 and the cost of goods sold during May was \$75 000.  
The inventory in finished goods at the beginning of May was:

- A. \$5 000
- B. \$30 000
- C. \$10 000
- D. \$20 000

47.

As manufacturing companies become more automated, their cost structure will change so that:

- A. variable costs increase, fixed costs decrease
- B. variable costs decrease, fixed costs increase
- C. variable costs decrease, fixed costs increase
- D. there is no change

in  
the  
ratio  
of  
variable  
to  
fixed  
costs

48.

Conventional cost management systems use production volume as the measure of activity. Contemporary systems might use which of the following as activity measures:

A. number of batches

B. number of customers

C. number of production lines

D. All of the given answers

49.

Which of the following terms accurately describes all three manufacturing costs (i.e. direct materials, direct labour and manufacturing overhead)?

- A. Product costs
- B. Variable costs
- C. Direct costs
- D. Both direct costs and product costs

50.

The monthly cost of renting manufacturing equipment is:

- A. part

51.

With respect to the flow of manufacturing costs through the accounts, what does the ending balance of work in process account show?

- A. The total of costs for completed jobs.
- B. The total of costs for incomplete jobs.
- C. The amount of costs incurred for the period.

64.

Behaviour of fixed and variable costs.

Compare and contrast the behaviour of fixed and variable costs in total and per unit.

65.

Describe how the value chain can help a business analyse its cost structures. What is meant by upstream costs and downstream costs? Give examples.

66. Kevin Smith is the production manager of Mydas Ltd, a company that manufactures a range of motor vehicles. His role includes overseeing the entire production process of Mydas Ltd's three product lines: family cars, sports cars, and motor cycles. Once completed, all the cars are shipped to Australia, China and Korea by the company's shipping and transportation department.  
Identify two examples of controllable costs and two examples of uncontrollable costs for Kevin. Explain your answer.
67. Only long-term decisions require an understanding of costs.  
True False
68. Direct and indirect cost classification is based on cost behaviour in relation to changes in the level of activity.  
True False
69. Prime costs is the term given to direct labour and direct materials, as they are the major costs directly associated with the manufacture of a product.  
True False
70. Costs that managers cannot significantly influence are classified as uncontrollable costs.  
True False
71. A courier company may view kilometres driven as a possible cost driver.  
True False
72. In relation to the activities of the value chain of a manufacturing company, primary processes include accounting and legal activities.  
True False

73. Manufacturing organisations have four inventory accounts – raw materials, work in process, cost of goods sold and finished goods.
- True False
74. Inventoriable costs include direct materials, direct labour, manufacturing overheads and period costs for that accounting period.
- True False
75. Fixed costs per unit decrease as activity levels increase.
- True False
76. The equation to calculate total manufacturing costs = cost of goods manufactured – beginning work in process + ending work in process.
- True False

## Chapter 02 Testbank Key

1.  
(p. 42)

Which of the following statements is false?

- i. Qualitative information is not relevant for planning purposes.
- ii. Production costs are important for planning purposes, but selling and administration costs are not.
- iii. Information on revenues is not important for planning purposes.

- A. i
- B. iii
- C. i  
and

AACSB: Reflective  
Difficulty: Easy

Learning Objective: 02-01 Describe the components of conventional and contemporary management accounting systems

2.  
(p. 45)

Which of the following statements is true?

A. The word cost has the same meaning in all situations in which it is used.

B. Cost data, once classified and recorded, can be used for any purpose.

**C.** Different cost con

cepts  
and  
classifications  
are used  
for different  
purposes.

D. None of the  
given answers

AACSB: Reflective  
Difficulty: Medium

Graduate Attribute: Problem Solving

Learning Objective: 02-03 Explain what is meant by different costs for different purposes

3.  
(p. 56)

Which of the following statements is true? A cost is:

- A. always an expense
- B. always an asset
- C. can be either an expense or an asset**
- D. always a liability

AACSB: Reflective

Difficulty: Medium

Graduate Attribute: Problem Solving

Learning Objective: 02-10 Describe the cost flows in a manufacturing business and prepare a schedule of cost of goods manufactured, a schedule of cost of goods sold and an income statement for a manufacturer

4.  
(p. 47)

Variable costs:

A. vary  
indirectly  
with  
changes  
in  
activity  
level

**B.** vary  
directly  
with  
changes  
in  
activity  
level

C. vary

Graduate Attribute: Problem Solving

Learning Objective: 02-04 Classify costs according to their behaviour -- that is, as variable or fixed

6.  
(p. 47)

As activity level decreases, unit variable cost:

- A. increases proportionately with activity
- B. decreases proportionately with activity
- C. remains constant
- D. decreases by a fixed amount

AACSB: Reflective

Difficulty: Medium

Graduate Attribute: Problem Solving

Learning Objective: 02-04 Classify costs according to their behaviour -- that is, as variable or fixed

7.  
(p. 47)

As activity level increases, total variable costs:

A. increase proportionately with activity

B. decrease proportionately with activity

C. increase by a fixed amount

D. decrease by a fixed amount

AACSB: Reflective

Difficulty: Easy

Graduate Attribute: Problem Solving

Learning Objective: 02-04 Classify costs according to their behaviour -- that is, as variable or fixed

8.  
(p. 47)

Fixed costs:

A. vary directly with changes in activity level

B. in total remain unchanged as activity levels change

C. vary on a per unit basis

**D.** B and C

AACSB: Reflective

Difficulty: Medium

Graduate Attribute: Problem Solving

Learning Objective: 02-04 Classify costs according to their behaviour -- that is, as variable or fixed

9.  
(p. 47)

Which of the following is not an example of a variable cost?

A. Straight-line depreciation on a machine expected to last 5 years.

B. Wages paid to assembly line workers at a local manufacturing plant.

C. Timber used to make out doors.
