134. If it makes tax sense to finance businesses with debt, why do firms typically borrow less than half of their capital, i.e., what are the negatives of debt financing?

ANSWER: Debt increases a firm's risk because it may fail if earnings aren't sufficient to pay the interest. As debt increases, so does the risk of failure, and lenders eventually refuse to lend more money. Hence the risk associated with debt limits the amount any firm can borrow.

139. The following is a listing of tax considerations for John and Jane Alexander, who file jointly and have two children.

John's salary	\$45,000
Jane's salary	50,000
Real estate taxes	4,000
Interest from savings account	1,500
Interest from Arizona bonds	2,000
Interest on home mortgage	3,000
Contributions to charities	1,500
Gain on sale of stock held for 5 years	6,000

Assume the following hypothetical tax table:

0 - \$10,000	10%
\$10,000 - \$35,000	15%
\$35,000 - \$65,000	25%
over \$65,000	30%

The personal exemption rate is \$3,050

The long-term capital gains rate for this family is 18%.

- How much is the Alexanders' taxable income?
- What is the tax on their ordinary income?
- What is their capital gains tax?
- What is their overall average tax rate including the tax on capital gains?
- What is their marginal tax rate on ordinary income?

ANSWER:

- Taxable income
- Salaries + interest + capital gain - re tax - mortgage - charity - exemptions
 $\$95,000 + \$1,500 + \$6,000 - \$4,000 - \$3,000 - \$1,500 - \$12,200 = \$81,800$
 - Ordinary taxable income: $\$81,800 - \$6,000 = \$75,800$
 $\$10,000(.1) + \$25,000(.15) + \$30,000(.25) + \$10,800(.30) = \$15,490$
 - Capital gains tax:
 $\$6,000(.18) = \$1,080$
 - Average tax rate:
 $(\$15,490 + \$1,080) / \$81,800 = 20.3\%$

141. The Smith family has the following income

Salaries	\$88,000
Dividends	4,000
Interest on General Motors Bonds	9,000
Interest on Boston Bonds	8,000
Interest on savings accounts	2,000

During the tax year they sold a vacation home for \$65,000 that they had acquired several years ago for \$58,000. They also sold some of their GM stock, receiving \$22,000 after brokerage commissions. The shares had originally been purchased for \$30,000. They paid \$19,000 interest on their home mortgage and \$3,000 interest on credit card debt. They paid state income tax of \$7,000 and real estate tax of \$3,000. They donated \$2,000 to their church. They also paid \$1,400 toward the support of an elderly parent. The Smith's have two small children. The personal exemption rate is \$3,050. What is the Smith's taxable income? Show all calculations clearly.

ANSWER: Ordinary Income: $\$88,000 + \$4,000 + \$9,000 + \$2,000 = \$103,000$

Capital Gain/(Loss):

Vacation Home: $\$65,000 - \$58,000 = \$7,000$
GM stock $\$22,000 - \$30,000 = \underline{(\$8,000)}$

(\$1,000)

Deductions:	Mortgage interest:	\$19,000
	Local taxes	10,000
	Charity	<u>2,000</u>
		\$31,000

Taxable income: \$103,000 - \$1,000 - \$31,000 - \$12,200 = \$58,800

Note: Ignore exempt income, credit card interest, and support of elderly parent.

144. Red and Blue have EBIT of \$20.0M and pay tax at a flat rate of 30%. Red is equity financed and pays \$1.2M in dividends while Blue is debt financed and pays 1.2M in interest. How much will each company add to its retained earnings for the year. Explain the difference.

ANSWER:

	Companies	
	Red Equity Financed	Blue Debt Financed
	(\$ in millions)	
EBIT	\$20.00	\$20.00
Interest	0.00	1.20
EBT	20.00	18.80
Tax @ 30%	6.00	5.64
Net Income	14.00	13.16
Dividends	1.20	0.00
Net Retained Earnings	\$12.80	\$13.16

Blue is able to retain more because its interest payment to debt investors is tax deductible while Red's dividend payment to equity investors is not.

149. A local pizza restaurant purchased a delivery truck for \$35,000 with cash six and a half years ago. The vehicle has been depreciated straight line assuming a ten year life. It was sold yesterday for \$16,700. If the appropriate tax rate is 35%, how much does the sale contribute to net income and cash flow?

- a. \$1,557.50; \$15,142.50
- b. \$2,892.50; \$15,142.50
- c. \$4,450; \$12,412.50
- d. \$12,250; \$12,412.50

ANSWER: b

RATIONALE: $\$35,000 / 10 \text{ years} = \$3,500 \text{ a year} \times 6.5 \text{ years} = \$22,750$ $\$35,000 - \$22,750 = \$12,250$; $\$16,700 - \$12,250 = \$4,450$ $\$4,450 \times .35 = \$1,557.50$ $\$16,700 - \$1,557.50 = \$15,142.50$ $\$4,450 (1 - .35) = \$2,892.50$
