Chapter 2. Demystifying the ICD-10-CM Coding System

Multiple Choice

- 1. What are the **components** of the *International Classification of Functioning, Disability, and Health* (ICF)?
- A. Body structure, activities and participation, and personal factors
- B. Body structure and function, activities and participation, and environmental factors
- C. Body function, activities and participation, personal, and environmental factors
- D. Body function and structure, personal and environmental factors

ANS: B

Rationale: The components of the ICF are body structure and function, activities and participation, and environmental factors.

- 2. When was the ICD-10-CM coding system **implemented** in the United States?
- A. July 1, 2015
- B. September 1, 2015
- C. October 1, 2015
- D. October 21, 2015

ANS: C

Rationale: The ICD-10-CM coding system was implemented on October 1, 2015.

- 3. What year did most other countries **implement** the ICD-10-CM coding system?
- A. 2014
- B. 2012
- C. 2010
- D. 2008

ANS: D

Rationale: Most other countries had implemented the ICD-10-CM coding system by 2008, and it took the United States another 7 years to follow suit.

4. What was the main **reason** for the transition from the ICD-9 coding system to the ICD-10-CM coding system?

- A. The ICD-10-CM coding system adds more numbers for billing.
- B. The ICD-10-CM coding system provides a higher number to be used for functional outcomes.
- C. The ICD-10-CM coding system provides specificity to delineate functional outcomes.
- D. The ICD-10-CM coding system is no different from the ICD-9 coding system, just a higher number.

ANS: C

Rationale: The ICD-10-CM coding system accommodates changes in newer medical diagnoses and provides specificity to delineate specific functional outcomes necessary for reimbursement.

- 5. Identify the **characteristics** that are consistent with the ICD-10-CM coding system.
- A. Contains 3 to 5 characters; uses 2 to 5 numeric digits; identifies laterality of affected side
- B. Contains 2 to 5 numeric digits; supports health exchange with other countries; digit 1 is alpha
- C. Contains 4 to 7 alphanumeric digits; is flexible to accommodate new codes; has approximately 17,000 diagnostic codes
- D. Contains digit 1, which may be alpha or numeric; has limited spacing for new codes; is very specific

ANS: B

Rationale: The ICD-10-CM coding system uses approximately 69,000 diagnostic codes; is 3 to 7 characters in length; digit 1 is alpha and digits 4 to 7 are numeric; is flexible to accommodate new codes; is very specific; supports health data exchange with other countries; addresses laterality of affected side.

- 6. What are some of the common chapters used by PTs in the ICD-10-CM coding system?
- A. Chapter 2: Diseases of the Urinary Tract System
- B. Chapter 6: Diseases of the Nervous System
- C. Chapter 12: Diseases of the Reproductive System
- D. Chapter 16: Diseases of the Hand

ANS: B

Rationale: Chapter 6: Diseases of the Nervous System is one of the systems that physical therapist's address in their evaluation and subsequent care of the patient receiving skilled PT services.

- 7. Under the Merit Based Incentive Payment System (MIPS), clinics that meet one of the criteria listed below, must participate in MIPS, unless otherwise exempt with:
- A. bills more than \$50,000 for Part B covered professional services and sees more than 150 Part B patients and provides 200 or more covered professional services to Part B services.
- B. bills more than \$200,000 for Part B covered professional services and sees more than 150

Part B patients **and** provides 150 or more covered professional services to Part B services. C. bills more than \$90,000 for Part B covered professional services and sees more than 200 Part B patients **and** provides 200 or more covered professional services to Part B services. D. bills more than \$200,000 for Part B covered professional services and sees more than 150 Part B patients **and** provides 150 or more covered professional services to Part B services.

ANS: C

Rationale: Clinics must participate in MIPS (unless otherwise exempt) if, in both 12-month segments, the clinic:

- Bills more than \$90,000 for Part B covered professional services and
- Sees more than 200 Part B patients, and;

Provides 200 or more covered professional services to Part B patients

- 8. What is the **purpose** of the 7th character in the ICD-10-CM coding system?
- A. Identifies how many episodes of care the patient has received treatment
- B. Identifies when the patient entered into the treatment process
- C. Shows how many times the patient has been given therapy
- D. Identifies what portion of the evaluation process has been completed

ANS: B

Rationale: The purpose of the 7th character in the ICD-10-CM coding system is to provide providers and third-party payers with the ability to determine at what point the patient entered into the treatment process.

- 9. What letter identifies the patient is receiving **active** medical care for an injury from a new medical professional in the ICD-10-CM coding system?
- A. A
- B. I
- C. S
- D. D

ANS: A

Rationale: The letter A denotes the patient is receiving active medical care for an injury from a new medical professional in the ICD-10-CM coding system.

- 10. What letter identifies the patient is receiving **routine** care for an injury during the healing or recovery process?
- A. A
- B. I
- C. S

D. D

ANS: D

Rationale: The letter D denotes the patient is receiving routine care for an injury during the healing or recovery process in the IDC-10-CM coding system.

- 11. What letter identifies the patient is receiving medical care for an initial injury that has caused an **additional** deficit for which the patient may seek treatment?
- A. A
- B. I
- C. S
- D. D

ANS: C

Rationale: The letter S denotes the patient is receiving medical care for an initial injury that has caused an additional deficit for which the patient was seeking treatment.

- 12. In the ICD-10-CM coding system, which encounter denotes the patient is receiving active care for an injury by a new medical professional?
- A. Beginning encounter
- B. Initial encounter
- C. Previous encounter
- D. Sequela encounter

ANS: B

Rationale: The initial encounter denotes the patient is receiving active care for an injury by a new medical professional in the ICD-10-CM coding system.

- 13. In the ICD-10-CM coding system, which encounter denotes the patient is receiving routine care for an injury during the healing or recovery phase of treatment?
- A. Beginning encounter
- B. Initial encounter
- C. Subsequent encounter
- D. Sequela encounter

ANS: C

Rationale: The subsequent encounter denotes the patient is receiving routine care for an injury during the healing or recovery phase of treatment.

- 14. In the ICD-10-CM coding system, what code identifies where the injury happened?
- A. Activity code
- B. Place of occurrence code
- C. Excluded code
- D. Environmental code

ANS: B

Rationale: The place of occurrence code identifies where the injury happened (e.g., a soccer field, in the house, etc.).

- 15. Identify the functional outcomes that are used when evaluating a patient with Medicare coverage under the ICD-10-CM coding system that include, but are not limited to:
- A. Mobility, changing and maintaining body position and self-care
- B. Mobility, carrying objects, and moving in different directions
- C. Mobility, self-care, and ADL functions
- D. Mobility, walking, and maintaining body position

ANS: A

Rationale: The functional outcomes used in the evaluation of a patient with Medicare coverage, under the ICD-10-CM coding system, include: mobility, walking and moving around, changing and maintaining body position, carrying, moving and handling objects, self-care, other PT/OT primary functional limitation, and other PT/OT secondary limitations.

- 16. When using a functional outcome for a patient receiving Medicare coverage, which impairment, limitation, or restriction is identified with the modifier "CK"?
- A. At least 1% but less than 20% impaired, limited, or restricted
- B. At least 20% but less than 40% impaired, limited, or restricted
- C. At least 40% but less than 60% impaired, limited, or restricted
- D. At least 60% but less than 80% impaired, limited, or restricted

ANS: C

Rationale: The correct impairment, limitation, or restriction for the modifier "CK" is at least 40% but less than 60% impaired, limited, or restricted.

- 17. Under the ICD-10-CM coding system, which acronym identifies specific quality measures used when treating a patent with Medicare coverage?
- A. PQRT
- B. PQIT
- C. PSET

D. MIPS

ANS: D

Rationale: MIPS is a merit-based incentive payment system that was introduced in 2017, as a program to replace the PQRS system, and rewards value and outcomes through use of the MIPS and Advanced Alternative Payment Modes (APMs).

- 18. For a patient with Medicare coverage receiving physical therapy treatments 3x/week, when must the reassessment of progress be performed?
- A. 5th visit
- B. 10th visit
- C. 25th visit
- D. 30th visit

ANS: B

Rationale: For patients under Medicare coverage, functional outcome assessments are required over a specific time period, dependent on the number of weekly visits. Reassessments, following the initial evaluation, must occur on the 10th visit or 30th day of treatment. If a patient is being seen 3x/week, the reassessment would occur on the 10th visit. If the patient is being seen 1x/ week, the reassessment would occur on the 30th day.

- 19. CMS requires patients to be billed using specific time periods that can be divided into units. What is the collective name used for such units?
- A. 8-minute rule
- B. 10-day rule
- C. 30-day rule
- D. 60-day rule

ANS: A

Rationale: The 8-minute rule is used to bill specific time periods in billable units, as required through CMS for Medicare patients.

- 20. Specific units for the 8-minute rule that would equate with 4 units would equal how many minutes of direct treatment time?
- A. 8 to 22 minutes
- B. 23 to 37 minutes
- C. 38 to 52 minutes
- D. 53 to 67 minutes

ANS: D

Rationale: Under the 8-minute rule, 4 units equates to 53-67 minutes of direct treatment time.
